Winter 2013

MCIR Update

Tdap Assessment

MCIR is now assessing and forecasting **Tdap** for persons 19 years of age and older regardless of the interval from the last tetanus/diphtheria-containing vaccine received.

The Centers for Disease Control and Prevention (CDC) *Morbidity and Mortality Weekly Report (MMWR)* for June 29, 2012, outlined the [Advisory Committee on Immunization Practices \(ACIP\)](#) current recommendations for Tdap. ACIP recommends that all adults aged 19 years and older who have not yet received a dose of Tdap receive a single dose of Tdap regardless of the interval since the last tetanus or diphtheria toxoid-containing vaccine administered. MCIR will forecast using the start date of June 29, 2012.

- MCIR will forecast a dose of Tdap using licensure date of June 10, 2005 for persons aged 19 through 64 years without a tetanus/diphtheria vaccine in the last 10 years.
- MCIR will forecast a dose of Tdap using a start date of June 29, 2012 for persons aged 19 years through 64 years of age with a documented tetanus/diphtheria-containing vaccine in less than 10 years.
- For persons aged 65 years and older MCIR will forecast using a start date of June 29, 2012.

For more information on Tdap vaccines go to:
http://www.michigan.gov/documents/mdch/Tdap_Quick_Look_393092_7.pdf

Don't Forget

- Enter all immunization doses provided to children aged 0 through 19 years into MCIR within **72 hours** after administration as required by the Michigan Public Health Code.
- Update the address and contact name for **Responsibility Party** for Children and Adults in MCIR records to assure contact information is correct and immunization recall notices reach the parents/guardians of children. To update click **Edit** by **Personal Information** on the **General Information** screen.
- Enter documented disease/immunity for chickenpox into MCIR records (see page 2). This will eliminate the Varicella vaccine as assessing overdue.

The winner is!

Congratulations to our **Fall 2012** contest prize winner **Tracey Perry** from the office of **Dr. Cecelia Lopez** in Burton.

Enter the Winter Contest (page 2) for a chance to win.

Adding Immunizations, Immunities and Refusals into MCIR

When entering immunizations there are several **Types** on the drop down list on the MCIR **Add Immunizations** screen. There are five (5) Types, but providers who do not use the Vaccine Inventory Module (VIM) to track vaccine inventory will only see four (4). More than one Type can be entered at the same time. Types and definitions are:

1. **Admin:** For immunizations given from open inventory for providers using VIM. The vaccine, manufacturer, lot number and eligibility are required fields. Dose site and route can be selected from a drop down list.
2. **No Inventory:** For providers who do not use VIM to record doses given in their office. VIM providers can use this type to enter past doses from a closed inventory or for doses not tracked in VIM. Manufacturer, site and route can be selected and the lot number typed.
3. **Titer/Immunity:** To record documented positive titers or disease for select diseases. MCIR will assess as “series immune.”
4. **Non Admin:** For documenting non-administered vaccines and immunization refusals. A person still assesses as “overdue” for the vaccine series.
5. **Historical:** To enter shots **administered by another provider** recorded on a documented health record. Doses will automatically be designated as “Other Provider Data” under Eligibility and the manufacturer as “Unknown.” The vaccine manufacturer, lot number, dose and route can be entered if known.

The screenshot shows the 'Add Immunizations' web interface. At the top, it displays user information: Person: Michigan, ima; Birth Date: 01/31/2001; Provider: Overdue. There are navigation tabs for Person, Rem/Rcl, Sch/CC, VIM, Imp/Exp, VFC, My Site, Admin, Reports, and Other. Below the tabs are buttons for Add/Find, Roster, Add Imm, Add Event, Information, Status, and History. A 'Records per page' dropdown is set to 8, with Submit, Add More, and Cancel buttons. Five 'Immunization Information' sections are visible, each with a dropdown for Type and various input fields for Date, Vaccine, Mfr., Lot, Site, Route, and Eligibility. The types shown are Admin, No Inventory, Titer/Immunity, Non Admin, and Historical.

Contest!

Answer the following questions for a chance to win! Those with all the correct answers will be placed in a drawing for the a **\$10 gift card from either Target or McDonalds**. Email or FAX answers with your name and phone to the Region 4 office by **February 22, 2013**.

1. There are _____ **Type** choices on drop down list on the **Add Immunization** screen for VIM providers and _____ **Types** for Non-VIM providers.
2. MCIR now forecasts a dose of _____ for persons aged 19 years through 64 years of age with a documented tetanus/diphtheria-containing vaccine in less than 10 years.
3. Enter documented immunities under the _____ Type on the Add Immunization screen.

Wondering if you answered correctly last time? The answers for the Fall 2012 contest were:

1. **MCIR Reminder/Recall** generates letters to be mailed to people due or overdue for immunizations.
2. Enter other provider immunizations into MCIR records using the **Historical** Type option on the Add Immunizations screen.
3. HPV vaccine now affects the **overall immunization status** in MCIR records.
