9.3

## **Trigonometric Functions of Any Angle** For use with Exploration 9.3

**Essential Question** How can you use the unit circle to define the trigonometric functions of any angle?

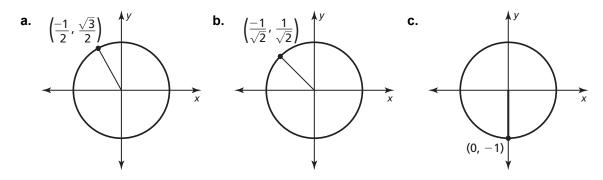

Let  $\theta$  be an angle in standard position with (x, y) a point on the terminal side of  $\theta$  and  $r = \sqrt{x^2 + y^2} \neq 0$ . The six trigonometric functions of  $\theta$  are defined as shown.

- $\sin \theta = \frac{y}{r} \qquad \qquad \csc \theta = \frac{r}{y}, y \neq 0$  $\cos \theta = \frac{x}{r} \qquad \qquad \sec \theta = \frac{r}{x}, x \neq 0$
- $\tan \theta = \frac{y}{x}, x \neq 0$   $\cot \theta = \frac{x}{y}, y \neq 0$

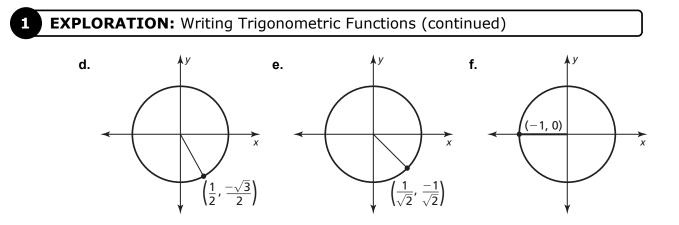

### **EXPLORATION:** Writing Trigonometric Functions

Work with a partner. Find the sine, cosine, and tangent of the angle  $\theta$  in standard position whose terminal side intersects the unit circle at the point (x, y) shown.

## 9.3 Trigonometric Functions of Any Angle (continued)

# Communicate Your Answer

2. How can you use the unit circle to define the trigonometric functions of any angle?

- **3.** For which angles are each function undefined? Explain your reasoning.
  - **a.** tangent
  - **b.** cotangent
  - **c.** secant
  - d. cosecant

# 9.3 Notetaking with Vocabulary For use after Lesson 9.3

In your own words, write the meaning of each vocabulary term.

unit circle

quadrantal angle

reference angle

# Core Concepts

### **General Definitions of Trigonometric Functions**

Let  $\theta$  be an angle in standard position, and let (x, y) be the point where the terminal side of  $\theta$  intersects the circle  $x^2 + y^2 = r^2$ . The six trigonometric functions of  $\theta$  are defined as shown.

$\sin\theta = \frac{y}{r}$	$\csc\theta = \frac{r}{y}, y \neq 0$
$\cos \theta = \frac{x}{r}$	$\sec \theta = \frac{r}{x}, x \neq 0$
$\tan\theta = \frac{y}{x}, x \neq 0$	$\cot \theta = \frac{x}{y}, y \neq 0$

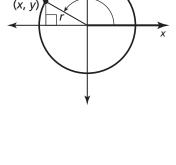

These functions are sometimes called *circular functions*.

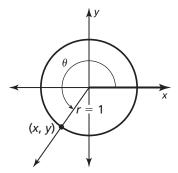

### **The Unit Circle**

The circle  $x^2 + y^2 = 1$ , which has center (0, 0) and radius 1, is called the **unit circle**. The values of sin  $\theta$  and cos  $\theta$  are simply the *y*-coordinate and *x*-coordinate, respectively, of the point where the terminal side of  $\theta$  intersects the unit circle.

$$\sin \theta = \frac{y}{r} = \frac{y}{1} = y$$
  $\cos \theta = \frac{x}{r} = \frac{x}{1} = x$ 

Notes:

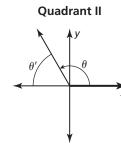

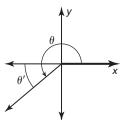

## 9.3 Notetaking with Vocabulary (continued)

#### **Reference Angle Relationships**

Let  $\theta$  be an angle in standard position. The **reference angle** for  $\theta$  is the acute angle  $\theta'$  formed by the terminal side of  $\theta$  and the *x*-axis. The relationship between  $\theta$  and  $\theta'$  is shown below for nonquadrantal

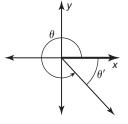

angles  $\theta$  such that  $90^\circ < \theta < 360^\circ$  or, in radians,  $\frac{\pi}{2} < \theta < 2\pi$ .

Quadrant III

Degrees:  $\theta' = 180^{\circ} - \theta$ Radians:  $\theta' = \pi - \theta$  Degrees:  $\theta' = \theta - 180^{\circ}$ Radians:  $\theta' = \theta - \pi$ 

Quadrant IV

Degrees:  $\theta' = 360^{\circ} - \theta$ Radians:  $\theta' = 2\pi - \theta$ 

#### Notes:

#### **Evaluating Trigonometric Functions**

Use these steps to evaluate a trigonometric function for any angle  $\theta$ :

- **Step 2** Evaluate the trigonometric function for  $\theta'$ .
- **Step 3** Determine the sign of the trigonometric function value from the quadrant in which  $\theta$  lies.

#### **Signs of Function Values**

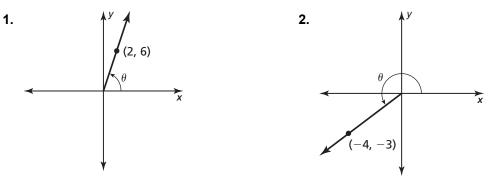

Quadrant II sin $\theta$ , csc $\theta$ : +	y Quadrant I sin $\theta$ , csc $\theta$ : +
$\cos \theta$ , $\sec \theta$ : -	$\cos \theta$ , $\sec \theta$ : +
$\tan \theta$ , $\cot \theta$ : -	tan $\theta$ , $\cot \theta$ : +
Quadrant III	Quadrant IV $\hat{x}$
sin $\theta$ , csc $\theta$ : –	sin $\theta$ , csc $\theta$ : -
cos $\theta$ , sec $\theta$ : –	cos $\theta$ , sec $\theta$ : +
tan $\theta$ , cot $\theta$ : +	tan $\theta$ , cot $\theta$ : -

#### Notes:

#### 9.3 Notetaking with Vocabulary (continued)

## **Extra Practice**

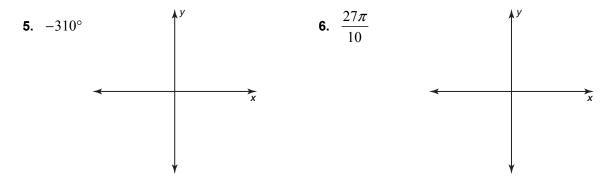

In Exercises 1 and 2, evaluate the six trigonometric functions of  $\theta$ .

In Exercises 3 and 4, use the unit circle to evaluate the six trigonometric functions of  $\theta$ .

**3.**  $\theta = -90^{\circ}$  **4.**  $\theta = 4\pi$ 

In Exercises 5 and 6, sketch the angle. Then find its reference angle.

**7.** Evaluate the function  $\csc 150^{\circ}$  without using a calculator.
