

## Diaphragm Valves SDV Series

are ideally suited for Shut-off, Flow Control and Throttling of corrosive and abrasive process media in either liquid or gaseous state.

### Modular Design

Diaphragm Valves SDV Series are available as DIN- or ANSI-Valves, with handwheel for manual operation as per standard.

The sturdy design bodies are made of cast steel 1.0619 (WCB), coating RAL 5005 signal-blue or stainless steel casting 1.4408 (CF-8M), with resistant linings such as PFA or PFA-AS (anti-static).

Proven PTFE/EPDM-diaphragms assure faultless closing function at any time.

### Main Features

- Heavy-duty, robust construction, maintenance-free
- Bubble-tight shut-off throughout the full pressure and temperature range
- Spindle protected against atmospheric corrosion
- Force limiting device protecting diaphragm from cold flow and other deformations, high life cycle
- Yellow sight indicator showing actual position of diaphragm
- Easy replacement of components on site
- Flanges acc. to DIN PN10/16 resp. ANSI 150lbs for installation into existing piping systems

**CE** Conformity according to European Pressure Equipment Directive 97/23/EC (PED)

### Options

#### Sliding Spindle

Body 1.0619/PFA, for external actuators

#### Automated Valve

Body CF-8M/PFA, with pneum. actuator, el. position indicator and solenoid valve

#### Automated Valve

with el.-pneum. positioner

# SDV: Technical Data, Construction

21 Diaphragm Valves, plastomer-lined

PM 21 M.01 e

March 2006

## Operating Conditions

- Temperature range from  $-30^{\circ}\text{C}$  up to  $+150^{\circ}\text{C}$  (depending on lining material)
- Pressure range from 13.33 mbar up to 16 bar (depending on size)

## Testing / Marking

- Pressure- and tightness testing acc. to EN 12266-1, leakage rate A, and spark testing at 35 kV to assure lining integrity. Marking of valves on body and name plate acc. to EN 19.
- Material- resp. test certificate acc. to EN 10204-3.1

**Mounting Options** Dimensions in mm (lbs = kg x 2.2)

**Accessories**

- Electric position indicator
- Adapter mounting kit  
must be applied if valve with stroke limiter and manual override is combined with an electric position indicator
- Stroke limiter/manual override
- Mounting flange kit for el.-pneum. positioner
- Electro-pneum. positioner
- 3/2-way solenoid valve for single-acting actuators
- 5/2-way solenoid valve for double-acting actuators
- Pneum. positioner
- NAMUR adapter plate

Standard Version w/o stroke limiter and manual override

**Modes of Operation**

**FC: Single-acting (Spring to close)**

In the de-energized state, the valve is **closed** by spring force. When the control media is admitted to the actuator (connection **A**), the valve opens; as soon the control media escapes, the valve is closed again by spring force.

**FO: Single-acting (Spring to open)**

In the de-energized state, the valve is **opened** by spring force. When the control media is admitted to the actuator (connection **B**), the valve closes; as soon the control media escapes, the valve is opened again by spring force.

**DA: Double-acting**

The valve has no defined position, it is **opened** and **closed** by applying control air pressure to the corresponding **control connections**, i.e. connection **A** for open, connection **B** for close.

**Air Supply Diagrams**

Guide lines, lower air pressures are possible by reducing the spring force.

- Control media: inert, non-aggressive gases
- Temperature of control media: max. 40°C

**FC: Single-acting (Spring to close)**

Air supply allowable max. 7 bar

**DA: Double-acting  
FO: Single-acting (Spring to open)**

Air supply allowable max. 5 bar
