

Neoss Australia presents

PRACTICAL IMPLANTOLOGY

STUDY GROUP

ADELAIDE 2014

Intelligent Simplicity
www.neoss.com

This 6 part course is aimed at general practitioners with little to no experience in implant dentistry who would like to advance their knowledge. Addressing issues relating to implant dentistry in a problem solving manner the course is designed to both facilitate complication free implants and advance participants knowledge of factors affecting prosthodontics in general.

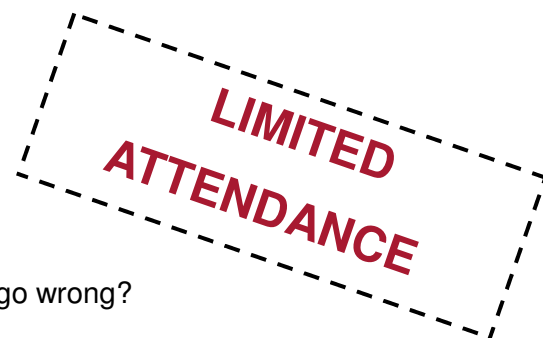

Participants are encouraged to bring along study models and radiographs to discuss the placement and restoration of implants, with mentorship of those restoring for the first time.

The seminars are informal and friendly so as to encourage interaction and participation so practitioners can learn simple, safe and reliable techniques when restoring dental implants. There will be a hands-on session on impression taking and implant placement on models. The below listed topics will be covered over the duration of the six evenings.

Learning Outcomes:

At the end of the program participants will have the knowledge to understand the processes of each step involved in the implant process. They will know the different options available, the associated benefits and risks of each option and be competent to answer the following questions:

- Should I offer implants to my patients now?
- What do I need to know before I start?
- What tools do I need?
- Which patients should I refer?
- What cases should I start with?
- Do I do the surgery, the prosthetics or both?
- Where can I get help or advice should something go wrong?

LECTURE DATES & TOPICS:

MAY 12th	- Factors to consider with missing teeth
JUNE 2nd	- Where do I start?
JUNE 30th	- How to avoid expensive mistakes
AUGUST 4th	- Implant surgery and temporisation
SEPTEMBER 1st	- Restorative options – what's important?
OCTOBER 13th	- Impression taking, issuing restorations and maintenance

ELIGIBLE FOR 15 CPD HOURS

Dr Peter Hell

Peter completed his Masters in Prosthodontics with honours from the University of Sydney in 2007 and attained his Fellowship from the Royal Australasian College of Dental Surgeons in the same year. He went on as a staff specialist at Westmead Centre for Oral Health being involved in surgical research projects and teaching at both undergraduate and postgraduate level. Since completing his BDS in Bristol in 1991 he has worked in Colorado, Hanoi, Taranaki and London, where he completed a year-long restorative course at the Eastman Dental Institute. Over twenty years of clinical practice Peter has continued to evaluate the latest techniques against traditional methods in both prosthodontics and implant surgery. With a particular interest in optimal planning and execution of implant treatment, Peter is actively involved in teaching and mentoring and enjoys helping others to safely advance their scope of practice.
