1 Overview

The purpose of this document is to describe the TMS standard Extensible TV Data (XTVD) schema and its relation to the TV Schedules and Channel Lineups data. Also, refer to the following files for more details regarding this schema:

- XTVD schema tmsxtvd.xsd (version 1.2)
- Common data-types schema tmsxg.xsd
- Sample XTVD file with data gold_sample.xml

2 Glossary

- Extensible TV Data schema (XTVD) a document in XML format that contains station, lineup, schedule, program, genre and advisory information customized to a specific user's preferences.
- All dates and times are specified in UTC.
- Date Time format ISO 8601 pattern for date+time information: YYYY-MM-DDThh:mm:ssZ.
- Date format ISO 8601 pattern for date: YYYY-MM-DD.
- Time format ISO 8601 pattern for time of day: hh:mm:ss.

3 XTVD Element Relationships

The diagram below illustrates the relationships between the elements of the XTVD schema.

4 XTVD Data Definitions

Data Location	Value	Definition
XTVD Document		
xtvd/@from	YYYY-MM- DDThh:mm:ssZ	Starting date/time of the document in UTC as specified in the request. All schedule records will have an airtime greater than or equal to this value.
xtvd/@to	YYYY-MM- DDThh:mm:ssZ	Ending date/time of the document in UTC as specified in the request. All schedule records will have an airtime less than or equal to this value.
xtvd/@schemaVersion	n.n (e.g. 1.1)	Current version of the XTVD schema.
Stations – collection of user selected station eleme more than one lineup, it will only be displayed on		a station appears on
xtvd/stations/station/@id	Field length minimum 1, maximum 12 (e.g. 11259)	Unique station id number. Only unique selected stations for a user will be displayed.
