

JIORA

JOINT IO RANGE APPLIANCE

JIORA is a small form factor appliance capable of delivering Joint Information Operations Range (JIOR) connectivity. The appliance fills the role of a smaller size and cost JIOR Service Delivery Point (SDP) while still delivering security and capability that JIOR users require. The JIORA securely wraps all the traditional JIOR components in a small rack mountable, secure enclosure. Northrop Grumman has built in security by adding power filtration to reduce electromagnetic emanations and providing a lockable and tamper evident enclosure. User serviceable components are all located on an easily accessible slide out shelf. Our confidence in the quality of our appliance is backed by a one (1) year replacement warranty and a toll-free help desk if there are any questions or concerns.

Includes:

- 1 JIOR Baseline Router
- 1 JIOR Baseline Firewall
- 1 JIOR Baseline Encryptor
- 2 Thin Client Laptops
- 2 IP Phones
- 1 Out-of-Band Console Server
- 1 Secure Rack Mount Enclosure with Power Filtration

We will deliver our JIORA typically within 4 to 6 weeks of order and fully conformant to the JIOR certification and accreditation design.

(Note: As of this date, JIOR accreditation is pending. Northrop Grumman will ship after Government accreditation of the JIORA design.)

Feature	Detail
Dimensions (H x W x D)	7 in x 17.5 in x 25 in
Rack Mount Height	4 RU
Power	100-240 VAC 50Hz/60Hz 10 Amps (Max)
Weight	93 lbs
User Interfaces	16 RJ-45 Fast Ethernet customer ports
WAN Interfaces	Single-mode 1Gbps or Multi-mode Fiber 100Mbps / 1Gbps
