➤ Business Income

Where the units of the Mutual Fund are regarded as business assets, then any gains arising from the transfer / redemption of units would be taxed under the head of "Profits and gains of business or profession" under section 28 of the Act. The gain / loss is to be computed under the head of "Profits and gains of business or profession" after allowing for normal business expenses (inclusive of the expenses incurred on the transfer).

Capital gains arising on the transfer or redemption of units held for a period of more than 12 months would be regarded as 'long term capital gains' which otherwise would be 'short term capital gains'. In case of ELSS, the units are subject to a lock-in period of 3 years. Accordingly, any sale of units after this lock-in period will qualify as long term capital gain.

• Long term capital gains

- 20% plus applicable surcharge and education cess at the rate of 3% on the amount of tax and surcharge, on the long term capital gains computed after substituting the indexed cost of acquisition for the cost of acquisition.

Furthermore, long-term capital gains in case of non-residents would be taxable @ 10% on transfer of capital assets, being unlisted securities, computed without giving effect to first & second proviso to section 48 i.e. without taking benefit of foreign currency fluctuation and indexation benefit.

The benefit of indexation will, however, not be available to specified offshore fund which is taxable @ 10% plus the applicable surcharge and education cess at the rate of 3% on the total amount of tax and surcharge in terms of Section 115AB of the Act.

The benefit of indexation will also not be available to Foreign Institutional Investors (FI) who are taxed under Section 115AD of the Act @ 10% plus applicable surcharge and education cess at the rate of 3% on the total amount of tax and surcharge.

In cases where the taxable income, reduced by long term capital gains of a resident individual or HUF is below the taxable limit, the long term capital gain will be reduced to the extent of this shortfall and only the balance of the long term capital gain is chargeable to income tax.

The following deductions are available on long term capital gains arising on transfer of Mutual Fund units, if the sale proceeds are invested in eligible avenues:

In case where the taxable income as reduced by short term capital gains of a resident individual or HUF is below the taxable limit, the short term capital gain will be reduced to the extent of this shortfall and only the balance of short term capital gain is chargeable to income tax.

Unabsorbed short term capital losses can be carried forward and set off against the income under the head capital gains in any of the subsequent eight assessment years.

RISK PROFILE OF THE SCHEME

PRINCIPAL GROWTH FUND

Prices of equity securities rise and fall in response to a number of factors including events that impact entire financial markets or industries (for example, changes in inflation or consumer demand) as well as events impacting a particular issuer (for example, news about the success or failure of a new product). The Securities purchased by the Scheme present greater opportunities for growth because of high potential earnings growth, but may also involve greater risks than securities that do not have the same potential. The Scheme may invest in companies with limited product lines, markets or financial resources. As a result, these securities may change in value more than those of larger, more established companies. As the value of the securities owned by the Scheme changes, the Scheme unit price changes. In the short-term, the price can fluctuate dramatically.

As with all Mutual Funds, as the value of the Scheme's assets rise and fall, the Scheme unit price changes. If the units are redeemed when their value is less than the price paid for, money may be lost by the unitholder.

PRINCIPAL DIVIDEND YIELD FUND

1. Though the investments would be made in companies having a track record of dividend payments, the performance of the scheme would inter-alia depend on the ability of these companies to sustain dividends in future.
2. These stocks, at times, may be relatively less liquid as compared to growth stocks.
3. The securities in the fund would be predominantly characterized as those having a value style. There could be time periods when securities of this nature would under-perform relative to other stocks in the market. This could have an impact on the relative performance of the fund over differing time periods.

PRINCIPAL GLOBAL OPPORTUNITIES FUND

The Scheme will predominantly invest in Principal Global Investors – Emerging Market Equity Fund (PGI-EMEF), a Fund advised by Principal Global Investors – LLC USA. Scheme may also invest, at the discretion of the Trustee in the units of other similar overseas mutual fund schemes, which may constitute a significant part of its corpus. Hence all the risks associated with investment in PGI-EMEF or other similar overseas mutual funds including performance of their underlying units, stocks, off-shore investments etc., will be applicable. Any change in the investment policies or the fundamental attributes of PGI-EMEF or in underlying schemes of any other similar Overseas Mutual Fund where the Scheme may invest could impact the performance of the Scheme. Further a certain portion of the scheme corpus may also be invested in money market securities and /or units of money market/liquid schemes of Principal Mutual Fund and therefore value of such investments held by the scheme generally will vary inversely with changes in prevailing interest rates.

PRINCIPAL INDEX FUND

The value of the equity securities owned by the Scheme changes on a daily basis. Equity Securities, prices reflect the activities of individual companies and general market and economic conditions. In the short term, equity security prices can fluctuate dramatically in response to these factors.

Tracking Error: The performance of the Scheme may not be commensurate with the performance of the Nifty on any given day or over any given period. Such variation, referred to as tracking errors as defined elsewhere in this Scheme Information Document may result from a variety of factors including but not limited to:

- The Nifty reflects the prices of securities at close of business hours. However the Scheme may buy or off-load securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the NSE.
- IISL undertakes a periodical review of the scrips that comprise the Nifty and may either drop or include new securities. In such an event the Scheme will endeavour to reallocate its portfolio but the available investment opportunities may not permit precise mirroring of the Nifty.
- Dis-investments to meet exits of investors, recurring expenses, etc. as elsewhere indicated in the Scheme Information Document.

As with all Mutual Funds, the value of the Scheme's assets under this option may rise or fall. If units are redeemed when their value is less than the price paid for money may be lost by the Unitholder.

PRINCIPAL TAX SAVINGS FUND AND PRINCIPAL PERSONAL TAX SAVER FUND

Prices of equity securities rise and fall in response to a number of factors including events that impact entire financial markets or industries (for example, changes in inflation or consumer demand) as well as events impacting a particular issuer (for example, news about the success or failure of a new product). The Securities purchased by the Scheme present greater opportunities for growth because of high potential earnings growth, but may also involve greater risks than securities that do not have the same potential. The Scheme may invest in companies with limited product lines, markets or financial resources. As a result, these securities may change in value more than those of larger, more established companies. As the value of the securities owned by the Scheme changes, the Scheme unit price changes. In the short-term, the price can fluctuate dramatically. As with all Mutual Funds, as the value of the scheme's assets rise and fall, the Scheme unit price changes. If the units are redeemed when their value is less than the price paid for, money may be lost by the unitholder.

PRINCIPAL BALANCED FUND

The value of the equity securities owned by the Scheme changes on a daily basis. Equity Security prices reflect the activities of individual companies and general market and economic conditions. In the short term, equity security prices can fluctuate dramatically in response to these factors.

Values of debt securities change daily. Their prices reflect interest rates, market conditions and announcements of other economic, political or financial information. When interest rates fall, the price of a debt security rises and when interest rate rise, the price declines.

As with all Mutual Funds, the value of the Scheme's assets under this option may rise or fall. If units are redeemed when their value is less than the price paid for money may be lost by the Unitholder.

PRINCIPAL RETAIL EQUITY SAVINGS FUND

The values of the equity securities owned by the Scheme are subject to change on a daily basis. Equity Security prices reflect the activities of individual companies and general market and economic conditions. In the short term, equity security prices can fluctuate dramatically in response to these factors.

Value of debt securities are subject to change on a daily basis. Their prices reflect interest rates, market conditions and announcements of other economic, political or financial information. When interest rates fall, the price of a debt security rises and when interest rate rise, the price declines.

As with all Mutual Funds, the value of the Scheme's assets may rise or fall. If units are redeemed when their value is less than the price paid for money may be lost by the Unitholder.

PRINCIPAL DEBT SAVINGS FUND - MONTHLY INCOME PLAN

When interest rates fall, the price of a debt security rises and when interest rates rise, the price declines. In addition, the value of securities held by the Scheme may be affected by factors such as credit rating of the entity that issues the debt security and effective maturities of the debt securities. Lower quality and longer maturity debt securities will be subject to greater credit risk and price fluctuations than higher quality and shorter maturity debt securities. As with all Mutual Funds, if the units are redeemed when their value is less than the price paid for, money may be lost by the Unitholder. The value of the equity securities owned by the Scheme changes on a daily basis. Equity security prices reflect the activities of individual companies and general market and economic conditions. In the short term, equity security prices can fluctuate dramatically in response to these factors.

PRINCIPAL DEBT SAVINGS FUND - RETAIL PLAN

When interest rates fall, the price of a debt security rises and when interest rates rise, the price declines. In addition, the value of securities held by the Scheme may be affected by factors such as credit rating of the entity that issues the debt security and effective maturities of the debt securities. Lower quality and longer maturity debt securities will be subject to greater credit risk and price fluctuations than higher quality and shorter maturity debt securities. As with all Mutual Funds, if the units are redeemed when their value is less than the price paid for, money may be lost by the Unitholder.

PRINCIPAL GOVERNMENT SECURITIES FUND

Prices of government securities rise and fall in response to a number of factors including events that impact entire financial markets or industries (for example, changes in inflation or consumer demand). The Securities purchased by the Scheme present greater degree of safety in terms of credit risk but may also involve greater interest rate risks. As a result, these securities may change in value. As the value of the securities owned by the Scheme changes, the Scheme unit price changes. In the short-term, the price can fluctuate dramatically. As with all mutual funds, if the values of the scheme's assets rise and fall, the Scheme unit price changes. If the units are redeemed when their value is less than the price paid for, money may be lost by the unitholder.

PRINCIPAL BANK CD FUND

When interest rates fall, the price of a debt security rises and when interest rates rise, the price declines. In addition, the value of securities held by the Scheme may be affected by factors such as credit rating of the entity that issues the debt security and effective maturities of the debt securities. As with all mutual funds, if the units are redeemed when their value is less than the price paid for, money may be lost by the Unitholder.

PRINCIPAL RETAIL MONEY MANAGER FUND

As with all Mutual Funds, the value of the Scheme's asset may rise or fall. Although the Scheme seeks to preserve the value of an investment at face value per unit it is possible to lose money by investing in the Scheme if the units are redeemed when their value is less than the price paid for. The investment of capital in the scheme is therefore not guaranteed.

INVESTMENT STRATEGY FOR THE SCHEMES

PRINCIPAL GROWTH FUND

The scheme will invest its assets in a portfolio of equity and equity related instruments. The focus of the investment strategy would be to identify stocks which can provide capital appreciation in the long term. Companies selected for the portfolio which in the opinion of the AMC would possess some of the characteristics mentioned below:

- Superior management quality
- Distinct and sustainable competitive advantage
- Good growth prospects and
- Strong financial strength

The aim will be to build a diversified portfolio across major industries and economic sectors by using "Fundamental Analysis" approach as its selection process.

PRINCIPAL DIVIDEND YIELD FUND

The scheme would invest predominantly (at least 65% of the net assets) in companies that have a relatively high dividend yield (i.e. last declared dividend divided by the current market price), at the time of making the investment. The Fund is defining dividend yield as "high" if it is in excess of 1.5 times that of the prevailing dividend yield of the NSE Nifty.

PRINCIPAL GLOBAL OPPORTUNITIES FUND

The Scheme will be predominantly investing in overseas mutual fund schemes. Currently Principal Global Investors - Emerging Market Equity Fund (PGI-EMEF) - a fund advised by Principal Global Investors - LLC (USA) has been identified as the overseas mutual fund portfolio for the purpose. Trustees, at their discretion, may decide to shift full or part of the investments to any other similar overseas mutual fund scheme(s).

The Scheme may also invest, at the discretion of the Investment Manager, in the units of other similar overseas mutual fund schemes, which may constitute a significant part of its corpus, and a certain portion of its corpus in Money Market Securities and/or units of Money Market / Liquid Schemes of Principal Mutual Fund, in order to meet liquidity requirement from time to time.

However, there is no assurance that the investment objective of the scheme will be retained.

As per the investment strategy of PGI-EMEF, it will predominantly invest in the equity securities of companies domiciled in, or doing business in emerging countries and economies, eastern Europe (including Russia), Asia and Latin America.

PRINCIPAL LARGE CAP FUND

Currently, more than 80% of market capitalization of the equity market is in large capitalization stocks and pursuant to the objectives of the scheme, the scheme would invest at least 65% of its assets in companies having a market capitalization greater than ₹ 750 crores as on the date of investment (or any such amount as may be specified by India Index Services and Products Ltd. (IISL) from time to time) being the upper limit of market capitalization as a criteria for inclusion of a company in CNX Midcap 200 Index. However, should IISL come out with a definition of 'Large Cap companies', the same will be utilized. The scheme may also invest upto 35% of its net assets in companies having a market capitalization less than ₹ 750 crores.

PRINCIPAL INDEX FUND

Units of the scheme have been designed with the intention of tracking the movement of securities (from time to time) included in the Nifty. The Scheme plans to do this by investing the entire corpus in the stocks that comprise the Nifty in similar weights to the weightage given by Nifty so that the portfolio would appreciate or depreciate (subject to tracking errors) in more or less the same manner as the Nifty.

Subject to the requirements of cash flows to meet the recurring expenses and to service investors who decide to exit from the Scheme or for distribution of income, if any, to investors, it is proposed that the corpus of the scheme will be invested in the Nifty securities. It is also proposed that disinvestment will take place only when investors exit from the Scheme or when any security ceases to be included in the Nifty or to meet the cash flow requirements.

The Nifty is designed to reflect the perceptions of the investors about the Indian economy. This is sought to be achieved by IISL by including companies representing a cross-section of the various sectors of the Indian economy. By endeavoring to track the Nifty to the extent possible under the prevailing circumstances and environment objectives and the features of the Scheme, the Fund expects to generate returns in the Scheme approximating the performance of the Nifty.

PRINCIPAL RETAIL EQUITY SAVINGS FUND

Investment would be primarily in equity and equity related instruments besides debt securities. In selecting equities the Investment manager looks for companies that have predictable earnings and which based on growth prospects, it believes are undervalued in the market place. The Investment Manger would buy securities with the objective of long term capital appreciation. Equity Securities in which Investment would be made shall normally generate dividend income. From time to time, the AMC shall purchase securities with the expectation of price appreciation over the short term. In response to changes in economic conditions the Investment Manager may change the make-up of the portfolio and emphasize different market sectors by buying and selling the portfolio's securities.

The Scheme shall generate interest income by investing in debt securities. Debt Securities are also purchased for Capital appreciation purposes when the Investment Manager thinks that declining interest rates may increase market value. Deep Discount debt securities may also be purchased to generate capital appreciation / income. The Scheme may also invest, at the discretion of the Investment Manager, in the units of Liquid /Money Market and Debt Mutual Fund Scheme(s).

PRINCIPAL SMART EQUITY FUND

The Scheme will decide on allocation of funds into equity assets based on equity market Price Earning Ratio (PE Ratio) levels. The PE Ratio has traditionally been used as a tool to assess whether the equity markets are cheap or expensively priced. When the markets become expensive in terms of 'Price to Earnings' Ratio; the Scheme will reduce its allocation to equities and move assets into debt and/or money market instruments and vice versa. Such a strategy is expected to optimise the risk-return proposition for the long term investor.

Under normal circumstances; the scheme's equity allocation may follow the following pattern based on CNX Nifty PE Ratio Level –

Weighted Average PE Ratio of CNX Nifty	Equity Component (%)	Debt Component (%)
Upto 16	100	0
Above 16 – Upto 18	80 - 100	0 – 20
Above 18 – Upto 20	60 - 80	20 – 40
Above 20 – Upto 24	30 - 50	50 – 70
Above 24 – Upto 26	10 - 20	80 – 90
Above 26 – Upto 28	0 - 10	90 – 100
Above 28	0	100

For this purpose the month end PE Ratio of CNX Nifty Index (NSE Nifty) will be considered.

Such a PE Ratio will be the month end weighted average PE Ratio of the constituent stocks making up the CNX Nifty Index. The Price considered will be the closing market price on the NSE as at the month end. The undiluted earnings per share will reflect the trailing earnings of the most recent four quarters of each of the companies, for which information is available.

This PE ratio will be rounded off to the nearest decimal. Thus every month end we would observe the above mentioned PE ratio and the resultant PE band. The investment strategy outlines different PE bands and the asset allocation applicable to each band. If there is a change in the PE band as observed on the latest month-end as compared to last month-end (due to Nifty's PE moving out of one band to another) then it will require rebalancing of portfolio to bring the equity component in line with the new band. This rebalancing would be done latest before the end of the subsequent month.

PRINCIPAL EMERGING BLUECHIP FUND

The investment strategy of the fund will be based on market cap of the stocks. The fund will predominantly invest in midcap stocks. This midcap range will be so determined taking into account the midcap range of the benchmark index at the end of every calendar quarter. Such midcap range once determined at quarter end will apply to all investment decisions made during the following quarter.

The fund will also invest in small cap stocks to tap high growth opportunities offered by such stocks.

For the purpose of maintaining liquidity or tap market opportunities; the fund may also invest in large cap stocks. Stocks selection will be primarily on bottom up approach on stock-by-stock basis. As part of its objective of maximizing investor's wealth creation potential over the longer duration, the fund may also invest in equity and equity related instruments of unlisted companies in line with SEBI regulations. A part of the portfolio will also tap arbitrage opportunities in the domestic markets like equity & equity related instruments, convertible preference shares, and convertible debentures. The Scheme intends to invest in derivatives not exceeding 50% of the net assets of the Schemes, subject to the limits as specified from time to time for hedging and rebalancing purposes or to undertake any other strategy as permitted under SEBI Regulations from time to time.

The Fund Managers will follow an active investment strategy depending on the market situation and opportunities available at various points of time.

COMPARISON OF OPEN-ENDED SCHEMES

PRINCIPAL GROWTH FUND: Principal Growth Fund is an open ended diversified equity scheme. It will seek to achieve long term capital appreciation by investing across market capitalization and would cover all the sectors of the economy. Investment gamut of the scheme will follow a no market cap and no sector bias. The scheme is benchmarked with BSE 200 index. This is the only scheme which can be defined as truly diversified.

PRINCIPAL DIVIDEND YIELD FUND: The scheme is an open ended equity scheme which will predominantly seek to invest in companies which have a dividend yield of at least 1.5 times that of CNX Nifty Index. While the scheme has an option to diversify some of its investments in other equity/equity related instruments, what sets it apart is that it will follow a diversified equity and across market capitalization mandate but with focus towards such companies which have a high dividend yield as mentioned above. In the basket of open ended equity schemes of Principal Mutual Fund, this is the only scheme which has a specific mandate to invest in high dividend yielding companies.

PRINCIPAL GLOBAL OPPORTUNITIES FUND: The scheme is an open ended fund of funds scheme predominantly investing in units of overseas mutual fund schemes. Presently the scheme is invested in units of Principal Global Investors - Emerging Market Equity Fund, however the Trustees, at their discretion, may decide to shift full or part of the investments to any other similar overseas mutual fund scheme(s). Performance of the scheme is benchmarked with MSCI World Index. The scheme helps to diversify the basket of our offerings to the investors by giving an opportunity of investment in overseas securities. Presently this is the only Fund of Funds offered by Principal Mutual Fund.

PRINCIPAL LARGE CAP FUND: The intent of Principal Large Cap Fund is to predominantly invest in Companies with large market capitalization and to build a portfolio with an endeavour to provide growth combined with relative stability associated with Large Cap stocks. Amongst all the open ended equity schemes, this is the only scheme with an investment mandate specifically directed towards large caps.

PRINCIPAL INDEX FUND: As the name of the scheme suggests, the investment mandate of this Scheme is to invest in securities comprised in CNX Nifty Index. The investment weightage of the stocks will reflect the weightage of the respective companies in the benchmark index. The scheme will offer to investors, an opportunity to invest in NSE Nifty companies and participate in the growth offered by these companies. Subject to tracking error, the scheme will seek to offer returns as offered by NSE Nifty Index. Presently this is the only index fund which is available in the bouquet of open ended equity schemes offered by Principal Mutual Fund.

PRINCIPAL SMART EQUITY FUND: The asset allocation pattern of current equity schemes offered by Principal Mutual Fund; restrict the Scheme to curtail its exposure to equity and/or debt securities as per the defined scheme specified asset allocation pattern, subject of course to the terms and conditions stipulated in the relevant SID.

The intent of Principal Smart Equity Fund is to offer an opportunity to the investors to invest in one fund which would not only manage equity but also decide on allocation between equity; and debt & money market assets. This Scheme would seek to manage equity and non equity allocation based on historic PE (Price Earning Ratio) of the market (CNX Nifty) and thus would enable a long term investor to stay invested in equities without worrying about market valuations. As compared to a diversified equity scheme whose mandate is to manage equity; this scheme's mandate is to manage equity factoring in market valuation. So in scenarios when market valuations are way above acceptable levels/long term average, a regular equity scheme may still remain invested and is therefore prone to deep corrections. On the other hand; this scheme will gradually reduce its allocation to equities as valuations become steep and hence protect the investors from such deep corrections and also enable them to capture the full potential of attractive valuations post correction by redeploying cash. Hence the investor need not worry about valuations and try to time the markets; this scheme has inbuilt mechanism to manage allocation based on valuations; allowing investor's to stay invested irrespective of valuations.

As such the assets under this Scheme could be invested completely in equity or in debt and money market for defensive purposes. Currently none of the schemes of Principal Pnb Asset Management Company Private Limited offer such a dynamic asset allocation pattern. The features of this Scheme are not similar to any of the open ended schemes of Principal Mutual Fund.

PRINCIPAL EMERGING BLUECHIP FUND: Amongst the basket of open ended equity schemes, this scheme is primarily focused towards midcap stocks. The scheme will predominantly seek to invest in midcap stocks within the market cap range of its benchmark CNX Midcap Index. However such stock may or may not be a constituent of CNX Midcap Index at the time of investment. This midcap range will be determined taking into account the market cap range of the benchmark index at the end of every calendar quarter. Apart from the above, the scheme will seek to invest in small cap stocks to tap high growth opportunities offered by these stocks. This is the only scheme with a specific investment mandate directed towards investment in the companies within market cap range of its benchmark with a quarterly review of the benchmark market cap range for investment decisions for the following quarter.

PRINCIPAL BALANCED FUND: The scheme is having an asset allocation with a ceiling on exposure to equity/ equity related instruments. The investment mandate allows a maximum of 70% exposure to equity with an investment of at least 30% in debt instruments. Thus the scheme offers growth potential with equity investments and also seeks to generate interest income by investing in debt securities.

PRINCIPAL RETAIL EQUITY SAVINGS FUND: This scheme is uniquely structured to provide long term capital appreciation and regular income to the Investors. The scheme is structured to invest predominantly in equity / equity related instruments but with a component of upto 35% in debt and money market instruments (including units of Liquid / Money Market / Debt Mutual Fund Schemes).

PRINCIPAL INCOME FUND (LONG TERM PLAN AND SHORT TERM PLAN): Among the debt schemes offered by Principal Mutual Fund, Principal Income Fund is positioned to generate capital appreciation/accretion through investment in debt instruments. Principal Income Fund consists of Long Term Plan and Short Term Plan. Short Term Plan is positioned to achieve stable returns over short term investment horizons. While both Long Term Plan and Short Term Plan will seek to invest in debt instruments, securities of government, quasi-government, corporate issuers and money market instruments, Short Term Plan will seek to invest in securities with average residual maturity of upto 36 months. Amongst the open ended debt schemes, this Scheme is the Income Fund offering to the investors.

PRINCIPAL DEBT OPPORTUNITIES FUND: Among the debt schemes offered by Principal Mutual Fund, Principal Near-Term Fund is positioned to generate regular income & Capital appreciation through investments in debt securities and money market instruments. The Scheme offers two plans viz. Conservative Plan and Corporate Bond Plan. The Conservative Plan will have an average maturity of upto 367 days and duly reflects the conservative character of the portfolio and would cater to invest in such type of instruments that generate consistently superior yields at low levels of risk. Further, amongst the debt schemes offered Corporate Bond Plan is positioned to generate regular income & Capital appreciation through investments in a portfolio of securities issued by Companies. The Plan would seek to deliver returns through an active management strategy. The Fund Manager will take active strategic and tactical positions in corporate bonds with key elements of the alpha generation being Interest Rates and Credit. Corporate Bond Plan will have an average maturity of upto 5 years.

PRINCIPAL DEBT SAVINGS FUND: The scheme has two plans - MIP and Retail. The MIP plan will seek to generate regular income by investing in fixed income securities and also generate long term appreciation by investing a portion of corpus in equity/equity related instruments including units of equity mutual fund schemes while the Retail Plan will seek to generate income by investing in fixed income & related instruments. The equity investment in the MIP is capped at 15%.

The Retail Plan accepts subscriptions from Retail Investors only including Individuals, HUF and AoP.

PRINCIPAL CASH MANAGEMENT FUND: This scheme is suitable for investors who seek income from short term investments alongwith preservation of capital and maintenance of liquidity. The Fund Manager will endeavour to invest in securities which present minimal liquidity and/or credit risks. The investment universe of the scheme covers Call/Term Money/Repo/Reverse Repo/Deposits with Banks - upto 100%, Bills Re-discounting - upto 50%, other equivalent Money Market Instruments - upto 100%, Debt (including Securitised Debt) instruments other than those above - upto 50%. However as the scheme is positioned as a liquid fund, the scheme would be investing in instruments with maturity of up to 91 days.

PRINCIPAL GOVERNMENT SECURITIES FUND: As the name of the scheme suggests, the assets will be solely invested in government securities. The scheme can invest in government securities of any maturity. This is the only scheme dedicated exclusively for investing in government securities. Therefore the scheme is eligible to avail liquidity support (from RBI).

PRINCIPAL BANK CD FUND: Principal Bank CD Fund has an objective to generate returns and avoid short-term volatility in fixed income markets by investing primarily in Bank CDs. Bank CDs tend to offer safer haven and also carry high credit quality. Bank CDs also help the investors who are seeking exposure to money market while taking relatively lower credit risk and aiming to generate reasonable returns.

PRINCIPAL RETAIL MONEY MANAGER FUND: This scheme is positioned to invest its entire corpus in Debt and Money Market Instruments (including MIBOR linked instruments with daily put and call option). Within the investment mandate, the scheme can invest in instrument with maturity of upto 91 days.

PRINCIPAL PERSONAL TAX SAVER FUND: The scheme was initially launched by Sun F&C Mutual Fund and subsequently to requisite approvals certain select schemes of Sun F&C Mutual Fund - including this scheme - were taken over and migrated into Principal Mutual Fund. This scheme being is an open ended equity linked savings scheme provides an opportunity to investors to claim tax benefit under section 80C of the Income Tax Act, 1961. Investments in the scheme are subject to a statutory lock in of 3 years. The scheme also provides Accidental Death Insurance upto a maximum of ₹ 1 lakh.

PRINCIPAL TAX SAVINGS FUND: The scheme initially launched as Tax I-NIT'96 by IDBI Mutual Fund is an open ended equity linked savings scheme which seeks to identify stocks which can provide capital appreciation in the long term. Investments in the scheme are eligible for tax benefit under section 80C of Income Tax Act 1961. Additionally the scheme also provides free personal accident death insurance upto ₹ 5 lakhs.

Currently, fresh sale of units (by way of Purchase or Switch ins) under the scheme is suspended.
