- 1.2 After the White Paper
- 1.3 A broader vision
- 1.4 Structure of the document

PART TWO

The small-business sector in South Africa's economic development

- 2.1 Size and diversity of the sector
- 2.2 Role and contribution of the sector
- 2.3 Constraints facing the small-business sector
- 2.4 Past support policies
- 2.5 International input
- 2.6 Research on SMMEs

PART THREE

Objectives and principles

- 3.1 Objectives of the national small-business strategy
- 3.2 Stages of strategy formulation and implementation
- 3.3 Setting goals for the national strategy
- 3.4 Fundamental principles
- 3.5 Targeting support

PART FOUR

Elements of the support framework

- 4.1 Creating an enabling legal framework
- 4.2 Streamlining regulatory conditions
- 4.3 Access to information and advice
- 4.4 Access to marketing and procurement
- 4.5 Access to finance
- 4.6 The physical infrastructure
- 4.7 Training in entrepreneurship, skills and management
- 4.8 Industrial relations and the labour environment
- 4.9 Access to appropriate technology
- 4.10 Encouraging joint ventures
- 4.11 Capacity-building and institutional strengthening
- 4.12 Differential taxation and other financial incentives

PART FIVE

Institutional reform

- 5.1 The Department of Trade and Industry
- 5.2 The National Small Business Council
- 5.3 The Small Business Development Agency
- 5.4 Wholesale funding agencies
- 5.5 Restructuring the SBDC
- 5.6 Small-business support at provincial level
- 5.7 Local authorities
- 5.8 Local Service Centres
- 5.9 NGOs and small-business support
- 5.10 Organised business

PART SIX

Action programme

- 6.1 An integrated view
- 6.2 Short-term: Action since mid-1994
- 6.3 Short-term: Fiscal year 1995/96
- 6.4 Medium-term developments 1996/97 1997/98
- 6.5 Medium-term developments 1998/99 1999/2000
- 6.6 Longer-term action 2000 to 2005

PART SEVEN

Funding the national strategy

- 7.1 The challenge
- 7.2 Funding sources
- 7.3 Leveraging programme funding
- 7.4 Meeting the challenge

FOREWORD

Since the elections of April 1994 the issues of economic empowerment

growth have been placed high on the agenda of the Government of $\operatorname{National}$

Unity of South Africa. With millions of South Africans unemployed and underemployed, the government has no option but to give its full attention

to the fundamental task of job creation, and generating sustainable and $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

equitable growth.

committed to

Small, medium and micro-enterprises (SMMEs) represent an important vehicle

to address the challenges of job creation, economic growth and equity in our

country. Throughout the world one finds that SMMEs are playing a $\ensuremath{\mathsf{critical}}$

role in absorbing labour, penetrating new markets and generally expanding

economies in creative and innovative ways. We are of the view that - with

the appropriate enabling environment - SMMEs in this country can follow

these examples and make an indelible mark on this economy. The stimulation

of SMMEs must be seen as part of an integrated strategy to take this economy

onto a higher road — one in which our economy is diversified, productivity $\$

is enhanced, investment is stimulated and entrepreneurship flourishes, $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

This White Paper represents government's thinking about what it can contribute to the process of stimulating small, medium and micro-enterprises. We believe that the real engine of sustainable and equitable growth in this country is the private sector. We are

doing all that we can to help create an environment in which businesses can

get on with their job. We believe in the principle of working together with

our partners in the private sector — big and small businesses — in realising

our hopes and aspirations for this economy. We are under no illusion that

we have all the answers to the problems of growth and redistribution in this

country. Indeed, we are bound to make errors of judgement in the next few

years. But we hope that our commitment to ongoing and serious consultation

with all the major stakeholders will ensure that we are guided in the right

direction.

This document is the result of an intensive process of consultation with key

stakeholders in the SMME sector. Pressures to deliver dictated very tight

schedules for this communication process. The feedback which we received on

the issues raised in the Discussion Paper of October 1994 made an important

contribution to government's thinking on small, medium and micro-enterprises.

We believe that the programmes and policies outlined here reflect the aspirations of many small-business people in our country. But we do not

intend to stop here. The White Paper will become a platform for even further consultations with stakeholders involved in small-business development. At the President's Conference on Small Business in March 1995,

we intend to present our programmes for public discussion and debate. May I express my personal thanks to the many individuals and organisations

who have contributed to the development of this White Paper. Such tireless

activity on the part of small-business entrepreneurs, the corporate sector, $\$

support institutions and all other players will prove to be invaluable for

the policies and strategies in this White Paper to be translated into real

progress in our economy and our nation.

Finally, I am honoured to have the opportunity to present the White Paper on

the National Strategy for the Development and Promotion of Small Business in

South Africa to the first democratically elected parliament in the history $\ensuremath{\mathsf{A}}$

of this country.

Trevor A. Manuel, MP

Minister of Trade and industry

PART ONE

Process and vision

The Reconstruction and Development Programme of the Government of National

Unity addresses a wide range of social and economic development issues, each

of which deserves detailed attention and concerted action. The promotion of

the small-enterprise sector of our economy is one of these critical areas.

Not only is it of great importance for the rate of job creation and income

generation in our country, but it deserves particular attention since the $% \left(1\right) =\left(1\right) +\left(1\right) +$

sector has been greatly neglected in the past - in particular black- $\ensuremath{\mathsf{owned}}$

and -controlled small enterprises.

1.1 The process of strategy formation

During the past few years several discussion papers and reports have been

circulated among small-business support agencies in South Africa. Numerous

conferences and workshops have been held to air the concerns of entrepreneurs and business associations, reflecting the full spectrum of

small, medium, micro- and survivalist enterprises (SMMEs). All along there

has been a search for consensus about support needs, feasible programmes and

a consistent national strategy.

In October 1994 the Ministry of Trade and Industry released a $\operatorname{Discussion}$

Paper on Strategies for the Development of an Integrated Policy and Support

Programme for Small, Medium and Micro-Enterprises in South Africa. This

draft document outlined a strategy framework for discussion among all the $% \frac{1}{2}\left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{$

stakeholders in the small-enterprise sphere. It already reflected inputs by

many institutions active in this field, including government departments, $% \frac{1}{2}\left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{$

business organisations, foreign donor agencies and policy experts. Between October and the end of 1994 about sixty workshops were held in both

rural and urban areas to explain the contents of the Discussion Paper and

encourage critical comments as well as practical proposals for adjustments

to the strategy. These sessions, which were well attended and which were

supplemented by numerous press comments on the document, gave rise to a

large number of written comments, including submissions from virtually all

the major business associations, the provincial small, medium and $\ensuremath{\operatorname{micro-}}$

enterprise (SMME) coordinators and several central-government departments.

All of these comments have been taken into account in the revision of the $\ensuremath{\mathsf{T}}$

document, to become this White Paper. The focus is now more specifically on $% \left\{ 1\right\} =\left\{ 1\right\}$

the role and programmatic approach of government, with greater focus on the $% \frac{1}{2}\left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1$

expected unfolding of the national strategy and the mobilisation of the

necessary resources.

The publication of the Discussion Paper occurred at a time when many of the

 $\ensuremath{\mathsf{SMME}}\xspace-support$ policies that evolved in the past were already in a process of

transition. The document itself and its widespread discussion further accelerated the reform process and gave rise to new impulses and initiatives. Feedback from these reform processes also influenced the final

shape of this White Paper. As such, it should be viewed as a further significant milestone in a long-run transformation process, rather than a

rigid framework document.

1.2 After the White Paper

Once it is endorsed by cabinet and parliament, the White Paper has to be

carried across to the full spectrum of the small-enterprise community, which

includes close to a million enterprises. A first step in this process is

the National Small Business Conference, to be held at the end of March 1995

in Durban and to be opened by President Mandela. The 2,000 invited delegates are to spearhead the further dissemination of this national strategy into all the comers of the country. During the conference, which

will include a large number of guests from our major trading partners and $% \left(1\right) =\left(1\right) +\left(1\right) +$

invited experts, working groups will look in more detail at the main strategy elements and how these can be implemented.

The proceedings of the conference will be summarised in the first Handbook

or Annual Review of South Africa's SMME sector, which is to be released in

mid-1995.

Parallel to this propagation process the small-enterprise desk in the Department of Trade and Industry (DTI) is to be expanded into a Chief Directorate for Small Business, and the Small Business Development Agency

(SBDA) will be established as the main implementation instrument of the

national strategy. The restructuring of other institutions, like the Small

Business Development Corporation and the regional development corporations,

is also making good progress, and negotiations should start soon about the $\,$

sharing of responsibilities for SMME support between the DTI and the SBDA on $\,$

the national level and the Departments of Economic Affairs and other regional agencies on the provincial level.

1.3 A broader vision

All of these efforts should be viewed within a broader vision of the South

African economy, which includes all the business sectors - big business,

multinationals, parastatals and also the small-enterprise sector – as $\ensuremath{\mathsf{part}}$

of an integrated, interdependent process. The small enterprise sector is

neither a "junior partner" in that process, nor is it a separate sector that $\ensuremath{\mathsf{S}}$

has to be treated according to different rules or principles, even though it

has been neglected and disadvantaged in the past and therefore needs to be

helped to take its rightful place among all the sectors.

The Government of National Unity is committed towards a strategy of high and

sustainable economic development. To achieve this, the economy needs to

move on a growth path of increased investment, enhanced productivity and $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

expanding employment opportunities – and all of this within a mould of

increasing general competitiveness.

While the better organised large enterprise sector should be able to move

towards the envisaged growth path with relatively limited support and prodding from government, the transformation of the small-enterprise sector

requires and justifies concerted policies of wider scope as well as the $\,$

deliberate creation of an enabling environment. Such initiatives need effective inputs from all segments of the economy and close cooperation

between government and the private sector. The ultimate goal is to ${\sf make}$

SMMEs equal partners in all the economic sectors, and to maximise the sector's contribution to the Reconstruction and Development Programme.

In this transformation process government is a facilitator and not an implementor. In fact, small-business support programmes are best implemented by institutions that most closely reflect the entrepreneurship

and risk characteristics of small businesses themselves. Such institutions

consultancies, partnerships and companies.

Finally, while government's role at the outset of this process is interventionist, it will be scaled down systematically after the first five

to ten years.

1.4 Structure of the document

This White Paper outlines a national strategy for SMME support, bearing in

mind that a short document can only present the framework, with details

having to be filled in by the implementing agencies.

To set the scene, Part Two of this document gives an overview of the small-business sector, its diversity, role and contribution to the economy

and the main constraints facing the sector. It also reflects briefly on $% \left\{ 1,2,...,n\right\}$

past support policies and support agencies as well as the role of foreign $% \left(1\right) =\left(1\right) +\left(1\right) +$

agencies and international experience in shaping a new strategy. Against that background, Part Three presents key objectives and fundamental

principles that underpin the national strategy and its different strategy

elements. It also introduces the important aspect of targeted support $\mbox{\sc which}$

will guide much of the government's future involvement in this sphere, viz.

that support should be focused on sectors or target groups that particularly

need it or justify it in terms of job creation, Reconstruction and Development Programme (RDP) involvement or income generation. Part Four of the White Paper covers all the elements considered

for a balanced and integrated 'national strategy". As shown in the sections

of Part 4 the government's involvement differs in the various areas, with

great emphasis placed on the responsibility falling upon other support $\ensuremath{\mathsf{Support}}$

agencies.

The different strategy elements have to be implemented through agencies at

central, provincial or local level, with the private sector, business associations, NGOs and parastatals important implementation agencies, parallel to the three tiers of government. Part Five outlines the institutional reform process as it should evolve, with particular emphasis

placed on key institutions, viz. the Chief Directorate in the DTI,

National Small Business Council (NSBC), the SBDA, provincial Departments of $% \left(1\right) =\left(1\right) +\left(1\right)$

Economic Affairs and Local Service Centres (LSCs).

Based on that institutional framework and the range of strategy elements, $\$

Part Six outlines the possible evolution of this national strategy, as

pursued by government. A distinction is made between short-term steps,

dominating efforts over the next two years, and medium to long-term goals $% \left(1\right) =\left(1\right) +\left(1\right) +$

and initiatives, which will gain their full momentum over the next three to

five years.

Finally, Part Seven highlights different financial sources which can be

mobilised to fund the national strategy, with the 1995/96 DTI budget merely

the point of departure.

The challenge with respect to this strategy now lies in finding a co-operative approach to the massive implementation task, guided by

framework outlined in this White Paper.

PART TWO

The small-business sector in South Africa's economic development

 $2.1 \; \mathrm{Size} \; \mathrm{and} \; \mathrm{diversity} \; \mathrm{of} \; \mathrm{the} \; \mathrm{sector}$

2.1.1 Although the statistical base of the SMMEs in South Africa is still

poor, there can be little doubt about their relative significance.

There are more than $800,000 \ \mathrm{small}$, medium and micro-enterprises in the

country, absorbing about a quarter of the labour force of 15 $\operatorname{million}$

people. This is in addition to about 3,5 million people involved in $% \left(1,0\right) =0$

some or other type of survivalist enterprise activities.

2.1.2 The small business sector is highly diverse, with structures, problems, growth potential and access to support differing widely

between segments. These differences relate as much to the

sectors — retailing, manufacturing, mining, etc. — as they relate to $% \left(1\right) =\left(1\right) \left(1\right) =\left(1\right) \left(1$

the stages of growth of enterprises, viz. start-up, expanding or $\$

stagnating.

From a broad strategy perspective the most important distinction is

between survivalist activities, micro-enterprises, small enterprises $% \left(1\right) =\left(1\right) +\left(1\right$

and medium-sized enterprises, with the general term "small business" $\mbox{\sc "}$

and the abbreviation "SMMEs" widely used to contrast this sector with $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

 $\mbox{\sc big(ger)}$ business. Due to the similarity of some of the obstacles

facing them, survivalist and micro-enterprises are often lumped together, whereas many support agencies feel that medium- sized enterprises need not be viewed as a category warranting particular

attention.

2.1.3 The following characteristics of the four categories should help to

justify particular policy stances outlined in this White Paper. Survivalist enterprises are activities by people unable to find a paid

job or get into an economic sector of their choice. Income generated $% \left(1\right) =\left(1\right) +\left(1\right$

from these activities usually falls far short of even a minimum income $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

standard, with little capital invested, virtually no skills training

in the particular field and only limited opportunities for growth into

a viable business. Poverty and the attempt to survive are the $\ensuremath{\mathsf{main}}$

characteristics of this category of enterprises. Support strategies

should primarily help these people — a large percentage of whom are

women to get out of this sector. Given the large number of people $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

involved in survivalist activities, this constitutes a vast challenge,

which has to be tackled within the broader context of the RDP (see $\,$

section 3.5.7).

them

 $\mbox{\sc Micro-enterprises}$ are very small businesses, often involving only the

owner, some family member(s) and at the most one or two paid employees. They usually lack 'formality' in terms of business licenses, value-added tax (VAT) registration, formal business premises, operating permits and accounting procedures. Most of

have a limited capital base and only rudimentary technical or

skills among their operators. However, many micro-enterprises advance into viable small businesses. Earning levels of micro-enterprises differ widely, depending on the particular stor.

the growth phase of the business and access to relevant support. $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

Small enterprises constitute the bulk of the established businesses,

with employment ranging between five and about 50. The enterprises

will usually be owner-managed or directly controlled by the $\operatorname{owner-}$

community. They are likely to operate from business or industrial $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

premises, be tax-registered and meet other formal registration requirements. Classification in terms of assets and turnover is difficult, given the wide differences in various business sectors like

retailing, manufacturing, professional services and construction.

Medium enterprises constitute a category difficult to demarcate vis-g-vis the "small" and "big" business categories. It is still

viewed as basically owner/manager-controlled, though the shareholding $% \left(1\right) =\left(1\right) +\left(1$

or community control base could be more complex. The employment of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

 $200\ \mathrm{and}\ \mathrm{capital}\ \mathrm{assets}\ (\mathrm{excluding}\ \mathrm{property})$ of about R5 million are

often seen as the upper limit. In terms of this White Paper we are

 $\hbox{concerned with medium-sized enterprises which face obstacles} \\$

constraints which cannot be solved through normal market forces and $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

private-sector action.

2.1.4 It follows from these distinctions and it is a fundamental principle

of the government's SMME support strategy that the problems of each of

these four categories need a somewhat different policy stance. Some

of these differences will be outlined in the White Paper, but the bulk

has to be reflected in the more specific implementation processes. $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

2.1.5 Equally important for the present phase of small business support in

South Africa is the recognition of the particular problems and needs $% \left(1\right) =\left(1\right) +\left(1\right$

of enterprises initiated, owned or controlled by those who were disenfranchised and/or otherwise discriminated against in the past.

Aside from the racial dimension, i.e. enterprises owned or controlled $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

by black South Africans, we also refer to women and all other disadvantaged and marginalised groups, including those in remote rural

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

enterprises are found in all four of the above categories.

The government is committed within given financial and

The government is committed, within given financial and organisational

constraints, to structure its SMME support in such a way that special

attention is given to the problems faced by these disadvantaged enterprises.

2.1.6 Since publicly funded support for small enterprises should only be

granted to those really needing it, the objective definition and

classification of different types of small enterprises is essential.

The DTI, after consultation with the NSBC, will create the $\operatorname{mechanism}$

to identify different types of enterprises based on sectoral, size and

developmental criteria.

2.2 Role and contribution of the sector

2.2.1 All over the world it has been recognised that the small business

 $\,$ sector plays an important if not critical role in the economic and

social development of a country. This also applies to South Africa, $% \left(1\right) =\left(1\right) +\left(1\right)$

where the small business sector has been neglected during much of the $% \left(1\right) =\left(1\right) +\left(1$

century following the discovery of diamonds and gold, and the establishment of a modem, capitalist economy with almost exclusive

white control.

2.2.2 While the importance of large industrial, mining and other enterprises

for the growth of the economy cannot be denied, there is ample evidence that the labour absorptive capacity of the small business

sector is high, the average capital cost per job created is usually

lower than in big business and its role in technical and other innovation is vital for many of the challenges facing South Africa's

economy.

2.2.3 Given South Africa's legacy of big business domination, constrained

competition and unequal distribution of income and wealth, the $\ensuremath{\mathsf{small}}$

business sector is seen as an important force to generate $\ensuremath{\mathsf{employment}}$

and more equitable income distribution, to activate competition, $% \left(1\right) =\left(1\right) \left(1\right) \left($

exploit niche markets (both internally and internationally), enhance

productivity and technical change, and through all of this stimulate

economic development.

2.2.4 Taking into account the very large micro-enterprise segment of the

small business sector, as well as those struggling in survivalist $% \left(1\right) =\left(1\right) +\left(1\right) +$

activities it should be clear that the small business sector plays \boldsymbol{a}

crucial role in peoples' efforts to meet basic needs and help marginalised groups - like female heads of households, disabled people

and rural families - to survive during the current phase of fundamental structural changes where the formal economy is unable to

absorb the increasing labour supply, and social support systems are

grossly inadequate.

2.2.5 Experience has shown that in the past black people have been able to

 $\mbox{\sc make}$ far greater progress in the micro- and small-enterprise segments

of the economy than in $\operatorname{medium-sized}$ and larger enterprises. Thus, the

 $\,$ SMME sector has - all its impediments notwithstanding - proven to be a

highly significant vehicle for black economic empowerment.

2.3 Constraints facing the small-business sector

2.3.1 There can be no doubt that, compared to big business in South Africa

and in other countries, small businesses face a wider range of constraints and problems and are less able to address the problems on

their own, even in effectively functioning market economies. The $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

constraints relate, among others, to the legal and regulatory environment confronting SMMEs, the access to markets, finance and

business premises (at affordable rentals), the acquisition of skills

and managerial expertise, access to appropriate technology, the quality of the business infrastructure in poverty areas and, in some

cases, the tax burden. In the South African context the constraints

have been particularly hard on entrepreneurs in rural areas and on $% \left(1\right) =\left(1\right) +\left(1\right)$

women.

 $2.3.2 \; \text{Much}$ has been written about these issues over the past few years and

debated at public forums internationally as well as in South Africa. $\!\!\!\!$

 $\,$ This White Paper is based on an understanding of these problems and

their legitimacy, without restating the facts here. At the same time

it has to be recognised that problems and constraints differ widely

between the various segments of SMMEs and also the sectors as well as $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1\right) +\left(1\right) =\left(1\right) +\left(1$

owner categories. Generally speaking, the micro- and survivalist $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

enterprises are far less able to face constraints linked to finance,

 $% \left(1\right) =\left(1\right) \left(1\right)$ market access and the acquisition of skills. On the other hand, some

sectors like agriculture, construction and manufacturing confront

small enterprises with a particularly wide range of problems, thus $\ensuremath{\mathsf{S}}$

preventing easy access to these sectors by new enterprises or increasing the risk of those already in the sectors. Even among medium-sized enterprises, problems like international competition,

technology transfer and skills training can constitute major growth

obstacles.

These differences are of critical importance for the national support $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{$

strategy. They not only stress the need for some degree of $\operatorname{\textit{public}}$

sector involvement, but also emphasise the need for explicit differentiation in the support framework.

- 2.3.3 In addition to sector-specific differences of constraints, the legacy
- of apartheid constitutes an important factor in the inability of

black owned or controlled small enterprises to face business development constraints. For decades, if not centuries, the majority

of South Africans were deprived of viable business opportunities in $% \left(1\right) =\left(1\right) +\left(1\right)$

the following ways:

a) Bantu Education restricted opportunities for the acquisition of $% \left(1\right) =\left(1\right) +\left(1\right)$

technical and professional skills by black people;

b) there was total absence of entrepreneurial education or sensitising $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

for young people in a way that could encourage them to enter business $% \left(1\right) =\left(1\right) +\left(1$

and acquire a culture of entrepreneurship;

 $\,$ c) apartheid confined the majority of the African people to homeland

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

business opportunities, but also lacked a dynamic business environment;

d) even outside the homelands the system of apartheid made it impossible for black would-be-entrepreneurs to participate in business

apprenticeships and partnerships with more established (non-black-owned/controlled) enterprises;

e) racially segregated residential areas, enforced through the $\ensuremath{\mathsf{Group}}$

Areas Act, not only uprooted millions from the places of residence and $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1\right) +\left(1\right) =\left(1\right) +\left(1\right) +\left($

business, but also led to large capital losses and virtually $\ensuremath{\operatorname{destroyed}}$

the fabric of black small enterprises;

 $\ensuremath{\text{f}}\xspace)$ segregation increased the distance between black residential and

working areas, thereby increasing the cost and risk of conducting $% \left(1\right) =\left(1\right) +\left(1\right) +$

business;

g) the drastic curtailment of property ownership rights of blacks made $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

it impossible for them to acquire assets that could serve as collateral for loan financing; it also excluded blacks from the long-run process of capital accrual and growth through rising property

values and share prices;

 $\,$ h) apartheid left no real space for the business involvement of black

women; marriage laws reduced women to unions with no contractual

capacity at all; even though marriage laws have changed, customary law

remains intact and there are cultural, behavioural and attitudinal

constraints which affect women's participation in business,

particularly in rural areas. There are also restrictions in terms of

access to land.

Due to these processes, small business-support policies will for a

considerable time also have to focus on the particular needs of black

enterprises and ways to overcome the remaining consequences of that

legacy. This does not imply that policies should only focus on black-owned or -controlled enterprises or businessinfrastructure

facilities in formerly black-reserved towns, but that policy differentiation will have to include affirmative elements.

2.3.4 All over the world small business-support policies have become targets

of active vested interest lobbying. All too often government is pressurised to help overcome constraints, even though enterprises -

either individually or through joint action — could also resolve the $% \left(1\right) =\left(1\right) +\left(1\right$

problems. This applies in particular to segments of the small business community which are well-organised, well-articulated and

skilful in the channelling of their request, thereby laying claim to a $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

disproportionate part of the limited resources available for $\ensuremath{\mathsf{small}}$

business support.

This government will not allow the channelling of disproportionate

shares of limited state resources — at both national and provincial $\ensuremath{\mathsf{Provincial}}$

levels - in directions that cannot be reconciled with national priorities as outlined in the RDP. This will be done through negotiation and by appropriate legal safeguards and guidelines.

2.4 Past support policies

2.4.1 A number of institutions have over decades developed a limited, often

fragmented range of small business-support policies and programmes,

some operating in competition with each other, and virtually all of $% \left\{ 1,2,\ldots ,2,3,\ldots \right\}$

them racially and gender-biased. The parastatal institutions included $% \left(1\right) =\left(1\right) +\left(1$

the homeland-based development corporations and some specialised $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

 $\ensuremath{\mathsf{SMME}}\xspace$ -support agencies (like Transido); furthermore the Development

Bank of Southern Africa (DBSA), the Small Business Development Corporation (SBDC) and the Industrial Development Corporation (IDC)

as financiers, and some of the commercial banks.

At the level of central government there was little co-

extended directly to the black business sector. For example, government procurement was largely channelled to white businesses.

Most of the university-based small business units, while receiving

financial support from the state, have until recently not succeeded $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

in effectively addressing the needs of the black small business sector. $\ensuremath{\mathsf{S}}$

In the private and NGO sectors a wide range of small business support $% \left(1\right) =\left(1\right) +\left(1$

bodies have evolved over the last decade, often operating in competition with each other. While largely ineffective in their overall impact, this trend reflects the rise of attention to

support for small businesses among local stakeholders and donors, and $% \left(1\right) =\left(1\right) +\left(1$

it is also indicative of a growing stream of foreign aid earmarked for $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

small business support.

and

2.4.2 It is mainly due to the diversity and uncoordinated nature of all

 $\,$ these support agencies and efforts – which in themselves need not be

undesirable — that the call for co-ordination, co-operation and $\ensuremath{\mathtt{a}}$

clear national strategy framework has increased over the past $\ensuremath{\mathsf{few}}$

years. Lack of legitimacy made it impossible for the previous government to fulfil such a role, whereas the new government is now

in a position and committed to do so through this White Paper. 2.4.3 In the evolution of these different support agencies, both inside and

outside the former homelands, many different policies and programmes $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

have been designed and implemented. Some have proved successful,

others have failed and most went through lengthy phases of experimentation and adaptation. In the context of this White Paper we

have to note the existence of such programmes — including those related to micro-enterprise lending, interest-subsidised loans, industrial hives, small business training, mentoring and the subsidisation of consultants, and for many other problem areas

without assessing their merits or suggesting their (dis)continuation.

It is only natural that in our forward planning we take into account

experience gained and lessons learned in the past. At the same t.ime

future strategies cannot be based on the assumption that organisations

active in certain fields in the past should necessarily continue with

all their past programmes. A realignment of institutions and their $% \left(1\right) =\left(1\right) +\left(1\right)$

responsibilities is inevitable within the context of the evolving $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right)$

national support strategy (see Part Five).

2.5 International input

2.5.1 Throughout the world the small-business sector has been gaining in

significance, also with respect to government support. As far

specific policies are concerned most of those tried in other $\ensuremath{\operatorname{developed}}$

or semi-developed countries are also known in South Africa. On the $\,$

whole, however, we have not yet effectively absorbed the rich experience and best practices built up elsewhere with respect to the

operational details and refinements of specific policies and programmes. In particular, we have largely ignored areas like state

 $\hbox{procurement and subcontracting, specialised credit-guarantee schemes}$

and sector-specific training programmes. The same applies to the $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

facilitation of co-operative efforts by small enterprises in particular sectors or niches to strengthen their bargaining positions

or to overcome constraints. We also have to focus far more on countries with an economic structure more in line with ours, like our

African neighbours as well as Asian, Latin American and Eastern European countries, rather than those reflecting North American or

Western European structures.

2.5.2 During the past few years some foreign agencies — in particular the

World Bank, the United States Agency for International Development

(US-AID), the European Union, Overseas Development Administration $% \left(1\right) =\left(1\right) +\left(1\right) +$

(ODA) and the Friedrich Ebert Foundation - have given close attention $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) =\frac{1}{$

to the needs of South Africa's black businesses and the design of an

appropriate support strategy. These contributions have also made us

 $% \left(1\right) =\left(1\right) \left(1\right)$ more aware of the diversity of support policies implemented elsewhere

and lessons to be learned.

In response to the Discussion Paper we have once again received valuable and constructive advice and technical as well as financial

assistance from several agencies and international bodies, i.a. to

 $% \left(1\right) =\left(1\right) \left(1\right)$ facilitate strategy discussions and to help us set up some of the

programmes. These include, in addition to the above, agencies from $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

the Netherlands, Den-mark, Australia, Singapore, Great Britain, Ireland, Germany and several other countries.

2.5.3 The government is committed to continue learning from best practices

developed in other countries and suitable to be adapted to our $\ensuremath{\mathsf{South}}$

African strategy. This will be endeavoured through desk research,

fact-finding missions, joint pilot projects and bilateral as well as $\ensuremath{\mathsf{L}}$

 $\mbox{\sc multilateral}$ support from foreign SMME support institutions. The

 $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right)$ effective integration of these inputs into the national strategy will

be one of the vital concerns of the Chief Directorate for ${\tt SMMEs.}$ In

this context, valuable contacts have already been established with the $\,$

Southern African Development Community (SADC) commission responsible

for small-business support in southern Africa.

On a more specific level it is noted that semi-developed (Asian)

countries that have over the past decade attained high, sustainable $% \left(1\right) =\left(1\right) +\left(1\right)$

and egalitarian growth share the following characteristics:

 $\,$ – high priority for the development of reliable statistics on the $\ensuremath{\mathsf{SMME}}$

sector

- high levels of human capital development
- a strong and broad-based small-scale manufacturing sector
- ready access to information technology
- consistent investment in research and development
- particular emphasis on women's enterprises, which have a strong

orientation towards food security, health and children's education.

All of these aspects also have a high priority in our national $\ensuremath{\mathsf{SMME}}$

support strategy.

2.6 Research on SMMEs

2.6.1 During recent years research on the trends, problems and needs of

small enterprises among South African universities, technikons and

other research centres has increased significantly. Yet, the volume

of research with a practical orientation and/or policy relevance is

still limited, compared to the needs of this country and our

research capacity. This relates in particular to the systematic development of base data and trend indicators on the ${\tt SMME}$ sector with

all its complexities. Such reliable data is critical for the assessment of policy efforts and the planning of policy reforms

2.6.2 The government hopes that existing research agencies and local as well

as foreign funders will adjust their priorities in order to generate $\ensuremath{\mathsf{g}}$

more of such relevant research. In addition the Chief Directorate and $% \left(1\right) =\left(1\right) +\left(1$

the other institutions to be established for the implementation of the $% \left(1\right) =\left(1\right) \left(1\right)$

 $\,$ national strategy (in particular the SBDA) will actively support such

research efforts. Particular emphasis will be placed on joint projects between local and foreign research bodies or teams and

co-operative research projects between different local institutions.

There will also be need for comparative research on the needs for $\ensuremath{\mathsf{SMME}}$

support in the different provinces and in the different regions of $% \left(1\right) =\left(1\right) +\left(1\right)$

southern Africa.

PART THREE

Objectives and principles

The need for a coherent national small-business strategy follows

logically from the background problems and challenges outlined in Part $\,$

 $\quad \ \ \,$ Two. Most of all, there is urgent need for a systematic national

framework, within which the different policies and programmes at $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

national, regional and local level can be coordinated. Such a macro-framework is also a precondition for the setting of priorities

and the appropriate allocation of scarce public funds. Furthermore, $% \left(1\right) =\left(1\right) +\left(1\right)$

it should facilitate the delegation of tasks and responsibilities with $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

respect to SMME support, the channelling of public as well as international donor funds to different institutions and the determination of accountability Finally, a transparent framework

should encourage greater rationalisation of resources and institutions.

This section summarises the broad objectives, goals and principles $% \left(1\right) =\left(1\right) +\left(1\right)$

underlying the government's involvement in the support and promotion

of small, medium, micro- and survivalist enterprises. Together they $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

indicate how the central government intends to approach SMME-related

 $\,$ policy issues and requests for financial and other support from the

small business community. It also reveals how government would hope

to interact with provincial governments, local authorities, parastatals and, most important of all, the private sector, in order

to achieve coordinated and effective support all over the $\operatorname{country}$

3.1 Objectives of the national small-business strategy

3.1.1 The primary objective of the national policy framework is to create an

enabling environment for small enterprises. Given such an enabling $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

environment it is expected that the hundreds of thousands of $\ensuremath{\mathsf{SMMEs}}$

will themselves accept responsibility for the operation, growth and $% \left(1\right) =\left(1\right) +\left(1\right)$

progress of their enterprise.

Such a national framework will need to be complemented with programmes

developed and implemented at regional and local level. Besides, $\ensuremath{\mathsf{small}}$

enterprises do not in themselves constitute an economic sector all on $% \left(1\right) =\left(1\right) +\left(1$

its own. Therefore, policies need to be in tune with national and $% \left(1\right) =\left(1\right) +\left(1\right) +$

regional as well as sectoral developments, taking into account differences between sectors like manufacturing, tourism or construction as well as differences between categories of SMMEs.

3.1.2 In addition to this basic objective of the national small business-

policy framework five more specific objectives underlying the support $% \left(1\right) =\left(1\right) +\left(1$

framework can be mentioned here:

 $\ -$ Facilitating greater equalisation of income, wealth and economic

opportunities

This relates to a strengthening of the labour-absorptive process in $% \left(1\right) =\left(1\right) +\left(1\right)$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

discrimination with respect to blacks' as well as women's access to $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

economic opportunities and power, and the facilitation of growth in $% \left(1\right) =\left(1\right) +\left(1\right)$

black and small enterprises in rural areas.

- Creating long-term jobs

 $\label{thm:co-enterprises} \ \ \text{and survivalist activities have} \\ \ \ \ \text{absorbed large}$

numbers of unemployed people, they are in themselves not always able

to generate reasonably remunerated long-term jobs. Support for small $% \left(1\right) =\left(1\right) +\left(1\right$

businesses has to include steps to upgrade the skill level of $\ensuremath{\mathsf{SMME}}$

operators, strengthen the use of appropriate, modern technologies and $% \left(1\right) =\left(1\right) +\left(1$

boost the capacity to create long-term jobs.

- Stimulating economic growth

While small enterprises have the potential to generate economic growth, this does not always happen spontaneously. It is the task of

a differentiated, sector-focused and growth-orientated small business-support strategy to address obstacles that prevent small

enterprises from contributing to overall growth.

- Strengthening the cohesion between small enterprises
Public- as well as private-sector support for small enterprises
has

clear limitations, given resource constraints. Yet, individually

SMMEs often lack the skills and resources to improve their own capabilities. It is thus essential that fragmented small enterprises

within sectors, industries, sub-regions or other localities be helped

to network more effectively in order to jointly address development

obstacles, take up opportunities and to build collective efficiency.

Successful examples of strategies based on collective efficiency exist $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

these interventions local governments have created conditions whereby

small firms can - through co-operation networks, the provision of

supportive services and infrastructure improvements — compete with the $\,$

best of large international firms.

Level the playing fields between bigger and small business
 Market opportunities, regulations and competitive structures
 have in

the past distinctly favoured larger enterprises and enterprises in $% \left(1\right) =\left(1\right) +\left(1\right)$

urban areas; the support strategy will help to rectify the imbalance.

 $% \left(1\right) =\left(1\right) \left(1\right)$ At the same time it aims at the greatest possible co-operation and

interaction of these segments of the economy.

3.1.3 Over and above these objectives, the national strategy also aims to

enhance the capacity of small business to comply with the demands

facing South Africa's modernising economy and the challenges of increasing international competition.

Table

Key objectives of the national small-business strategy

- Create an enabling environment for small enterprises
- \mid Facilitate greater education of income, wealth and earning opportunities \mid
- | Address the legacy of apartheid-based disempowerment of black business |
 - Support the advancement of women in all business sectors $% \left(1\right) =\left(1\right) \left(1\right)$
 - Create long-term jobs
 - Stimulate sector-focused economic growth

- Strengthen cohesion between small enterprises

 Level the playing fields between bigger and small playing fields between |

 bigger and small business as well as between rural and urban businesses |

 Prepare small businesses to comply with the challenges of an inter- |

 nationally competitive economy
- 3.2 Stages of strategy formulation and implementation Experience from other countries reveals a logical sequence in the establishment of a support framework. This applies in particular to the

early part of the process, where the following distinct stages can be distinguished.

3.2.1 Awareness building

The process of awareness building and commitment to goals should include

politicians, labour leaders and public-sector officials at central, provincial and local government level, private and NGO sector decision

makers, organised business, heads of research and training bodies and all

small business support agencies. The purpose is to reinforce understanding

for SMME support and its importance for the overall development of the $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

country and to get acceptance of and commitment to the policy framework and

the underlying goals. In this context the President's Conference on Small

Business, planned for March 1995 in Durban, is an event of critical importance for awareness-building in South Africa.

3.2.2 Needs identification and implementation planning

Once the goals and broad strategy have been accepted, it is necessary

evaluate and prioritise specific needs within the overall framework and $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

resource constraints. This should also include the linking of needs, action

plans and efficient delivery systems, the establishment of monitoring and

feedback systems, the commitment of key actors to specific support areas and $\ensuremath{\mathsf{S}}$

the strengthening of co-ordination and networking systems.

3.2.3 Resource identification

This phase can start concurrently with the former and is likely to extend

over a lengthy period. It includes surveys of resources available for SMME

support in each of the nine provinces, the establishment of a national data

bank for SMME-related statistics, an evaluation of the physical

infrastructure presently available for SMMEs and an assessment of the capacity of existing SMME support agencies.

3.2.4 Strengthening the business and entrepreneurial culture While progress has already been made in this sphere over the past years,

concerted efforts will greatly facilitate the implementation of the $\operatorname{national}$

strategy. This should include country-wide educational and sensitising

efforts, increased co-operation between business and tertiary education $\ensuremath{\mathsf{S}}$

institutions, and the further expansion of ownership participation of formerly disempowered people.

3.2.5 Training of support agency staff

This capacity-building process is critical for the success of the entire

implementation process. To be effective it has to be pursued concurrently

with the stages mentioned above, and it has to include all support agencies.

3.3 Setting goals for the national strategy

To become operationally significant, the objectives outlined in section $3.1\,$

would have to be put into quantifiable, specific goals or targets. This is

not possible within the framework of this White Paper, where provincial and $% \left(1\right) =\left(1\right) +\left(1\right)$

local strategies still have to be worked out and all stakeholders are to be

included in a goal-setting process. Such a task may, in fact, be tackled by

the NSBC and facilitated by the DTI Directorate and the SBDA.

In Part Six of this White Paper some indication is given of the difference

between short-, medium and longer-run goals and what the government regards $% \left(1\right) =\left(1\right) +\left(1\right)$

as relevant under each.

3.4 Fundamental principles

This section brings us closer to the wide range of issues that need to be

addressed by a partnership of government, NGOs, parastatals and the private

sector in order to promote and support SMMEs. Before we review different

elements of such a framework in Part Four, we have to state a number of

general principles which underlie all these strategy elements and which

will, in general, guide government involvement in this sphere. These principles should also help orientate the private sector, parastatals, NGOs

and other stakeholders as to the role of government vis-g-vis those other $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

players.

3.4.1 As indicated in Part One of this White Paper, the framework is based

on a coherent, integrated vision of South Africa's economic development

process. This vision sees the different segments of the SMME sector – $\,$

medium and small enterprises, micro-enterprises and survivalist

activities - as closely interconnected parts of the larger economy,

which also includes big(ger) businesses, multinationals, parastatals, $\$

NGOs and other non-business activities. Relative to the other segments the small business sector has been neglected in the past, and

this should now be redressed, where possible, in line with current

they encompass sector and industry perspectives, regional growth $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

perspectives and local development perspectives. Most important, the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

vision is based on the acceptance of the market economic system, $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

public and the private sector.

3.4.2 Government believes that it is necessary to break away from the traditional and static approach to small business development based

narrowly on the provision of financial support. We instead are committed towards a dynamic, demand-driven and creative approach which

in the first instance recognises the multiplicity of needs of ${\tt SMMEs.}$

The notion of "real services" is critical to this approach, i.e. that

a wide range of services can be instrumental in enhancing the performance of small firms.

3.4.3 The need to instill a "fee for service culture" also applies to the

small-business sector; wherever possible services received by enterprises should be paid for.

3.4.4 The government also feels strongly that small business support has to

be linked to compliance with generally accepted standards of business $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

behaviour. This relates as much to labour and managerial standards as $% \left(1\right) =\left(1\right) +\left(1$

it should apply to taxation, sector registration and reasonable social

standards as well as financial and costing disciplines of firms, both $% \left(1\right) =\left(1\right) +\left(1$

small and medium-sized. The strategy should enable SMMEs to comply $% \left(1\right) =\left(1\right) +\left(1\right)$

with negotiated and broadly accepted, flexible standards, but it is $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}$

also the objective of the strategy to encourage such compliance. This $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

is felt to be the only way in which SMME support can, in the final

instance, be linked to South Africa's quest for international competitiveness.

3.4.5 The government believes that small firms can become dynamic and highly

competitive, while striving for socially acceptable labour standards,

adopting new and more efficient technologies and effective work organisation techniques, and the government is committed to promote

development on this basis. This can be achieved through a range of

organisational practices which include increased co-operation, co-ordination and networking amongst smaller firms in specific sectors

so that services such as marketing, research and development, skills $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

acquisition and even production can be shared. Through such co-operation small firms can achieve, if not surpass economies-of-scale benefits enjoyed by large firms without

become large in size.

 $3.4.6\ \mathrm{It}$ is accepted that the demand side of the small business sector can

be an important factor in SMME growth and development. Thus, the $\,$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

enterprises to state procurement, big business purchases and $\ensuremath{\mathsf{export}}$

markets.

having to

learn

3.4.7 Another important principle of the new national strategy is the emphasis placed on black advancement in the enterprise sphere, including in this context all the groups disempowered through the

apartheid era. This is, however, not an exclusive goal, leaving considerable scope for other objectives as outlined earlier. Besides,

it is realised from the experience in other countries and lessons from $% \left(1\right) =\left(1\right) \left(1\right)$

our own past that there are more effective and less effective ways to

stimulate black business advancement. Thus, pursuing the fundamental $% \left(1\right) =\left(1\right) +\left(1\right$

goal of black advancement does not free us from the obligation of

weighing up the merits and risks of alternative support policies. $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

3.4.8 The scarcity of public resources available for SMME support constitutes a fundamental constraint upon all support policies. It

also forces us to constantly weigh up the public-sector cost of specific policies against the expected results of the support programmes. It is in this sphere where the need is greatest to

from practices in other countries, to compare the experience gained by

different institutions in these countries and to look for more efficient programmes.

3.4.9 Acceptance of the market orientation of our economic system and of the

government's fundamental budget constraints also forces us to look at

alternative funding, the leveraging of public funds, the effective use

of foreign donor funds and technical assistance, the introduction of

tax and other incentives to change private-sector attitudes, and

self-help or local community efforts to support small enterprises.

3.4.10 While the inevitability of budget constraints is stressed here, it is

also accepted as a fundamental principle that the overall share of $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1\right)$

budget support available for small enterprises - at central,
 provincial and local government level - is currently too low
compared

to the important role of this sector in the economy

3.4.11 Given the wide range of constraints or problems experienced by small

 $\,$ enterprises and given their diversity, it follows logically that a

 $\hbox{ national small business-support strategy will consist of a } \\ \hbox{ whole }$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

also finds a steady increase of specialised support policies, in

particular in the wealthy industrial countries. Such proliferation $% \left(1\right) =\left(1\right) +\left(1\right)$

of policies also has dangers, like the high cost to the fiscus and

the overlapping of programmes.

In the light of our limited public-sector resources it will thus be

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

support programmes. In fact, to counter the proliferation of programmes which might result from inter-provincial competition, the

central government may have to set national guidelines for key policy

areas. Preference will be given to policies which strengthen ${\tt access}$

to resources and steps to level the playing fields between established $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

and emergent enterprises. In addition, sunset clauses will have to be

built into programmes in order to prevent an escalation of cost over $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

the years.

3.4.12 While there can be little doubt about the need to restructure the

have to be gradual. This is necessary since implementation capacity $% \left(1\right) =\left(1\right) +\left(1\right)$

cannot be created easily, but can be destroyed instantly if institutions are dissolved. With the implementation of small business

support spread over many different bodies, and with the restructuring $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

of support agencies coinciding with a restructuring of all the provincial development agencies, this process is likely to extend over

at least the next two years. In this context the (re-)training of the

staff of different small business-support bodies is quite critical, as

is the evolving composition of staff at managerial level. 3.4.13 As far as the range of development support agencies is concerned, the

government accepts the diversity, both at national and at regional/local levels. The following institutions are seen as vital $\frac{1}{2}$

for the promotion of the SMME sector, with some indication of $\operatorname{current}$

and expected reform processes given in Part Five of this White Paper.

- The private sector has to play the most important role, through the $% \left(1\right) =\left(1\right) +\left(1$

supply of commercialised services for small enterprises, cooperation $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

and subcontracting between small and bigger enterprises, partnerships, $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

joint ventures and franchises as well as social responsibility commitments of the corporate sector related to small business development.

 $\ -$ The government recognises the diversity of legal and organisational

forms in which small enterprises can be structured. Cooperatives are

one of these forms, distinct from single proprietorships, partnerships $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

and closed corporations. The government is committed to facilitate

co-operative ventures within the strategy framework outlined in this

White Paper. If necessary, this will include legislative changes to

fully recognise co-operatives as legal entities.

 $\mbox{-}$ At central government level the Department of Trade and Industry is

the department primarily responsible for the formulation, co-ordination and monitoring of national policies related to small

enterprise. In the provinces appropriate government departments as $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) =\frac{1}{2}\left$

well as local agencies still have to evolve, in co-operation with the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

private and parastatal sectors.

- Parallel to the private, profit-orientated sector, non-governmental

support organisations (NGOs) and business chambers as well as industry $% \left(1\right) =\left(1\right) \left(1\right) \left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

policies.

 $\ -$ Foreign donors and multilateral aid as well as technical assistance

agencies already play an influential role in the policy planning and

pilot programme phase. In future it will be important that their

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

integrated with local efforts. Duplication of programmes or the

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

discouraged, in particular where the discontinuation of foreign support is likely to create new demands on the public sector.

3.4.14 It is taken as undisputed that an overall economic policy stance that

facilitates high economic growth and fiscal as well as price stability, constitutes the most significant macro-economic "support

policy" for an expanding small business sector.

3.4.15 South Africa's evolving small business-support strategy and

general approach towards small business promotion cannot be isolated $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

from the broader southern African (SADC) scene. Most of our neighbouring countries currently also grapple with the shaping of a

coherent, effective and feasible small business-support strategy.

The government will actively communicate with neighbouring countries $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

and/or the SADC about the basic structure of our small business-support framework and the needs, merits and challenges of

joint support programmes.

3.4.16 Finally, the principles underlying this strategy are not static, nor

is it possible to pursue each one fully right from the start. Gradualism is inevitable, being a consequence of financial and human

resource capacity constraints. It furthermore follows from the $\ensuremath{\mathsf{need}}$

to design and negotiate effective, people-centred implementation $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

processes and systems, which always takes time.

3.5 Targeting support

3.5.1 The vastness and complexity of the small business sector combined with

serious financial and human resource constraints with respect to

support programmes and policies make it essential to focus or target $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

 $\ensuremath{\mathsf{SMME}}$ support. This not only implies that publicly-funded support

cannot be made available to every category of SMME that experiences $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

sectorally and otherwise differentiated and packaged to suit the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

particular needs and circumstances. Such packages can consist of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

specific combinations of support policies of the types outlined in

Part Four of this document.

3.5.2 All over the world it has become customary to develop differentiated,

targeted support packages. The support can be financial in nature or

related to controls, training, export facilitation, etc. In $\ensuremath{\operatorname{South}}$

Africa there has been a tendency during the 1980s to move away from $% \left(1\right) =\left(1\right) +\left(1\right)$

complex support packages, on the grounds that they are difficult to $% \left(1\right) =\left(1\right) +\left(1\right)$

design in a way acceptable to diverse pressure groups, and that their

implementation demands effective organisation and good control systems, which may be difficult to establish. Yet, the government

believes that on balance they help save scarce public funds and $\ensuremath{\mathsf{will}}$

be more effective in the targeted areas.

This approach implies not only different sets of support policies to

address problems of medium, small and micro-enterprises as well as

survivalists, but also adjustments for different industrial, services

 $\,$ and primary subsectors. The same applies to the differentiation of

support for women, rural enterprises, school leavers, physically

handicapped people and other special target groups.

3.5.3 Such targeted support packages cannot be designed by the DTI or other

government departments in isolation; they have to evolve out of preparatory research, close interaction between all the stakeholders

in the target areas, and negotiations between the public sector and $% \left(1\right) =\left(1\right) +\left(1\right)$

motivated requests to assist subsectors or target groups, with the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

funding coming from existing support programmes and, if necessary and

acceptable to government, additional direct financial support from $% \left(1\right) =\left(1\right) +\left(1\right)$

government. Such differentiation places additional demands on the $% \left(1\right) =\left(1\right) +\left(1\right) +$

implementation agencies, yet it is necessary to save public funds, $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left$

 $% \left(1\right) =\left(1\right) \left(1\right)$ prevent the distribution of subsidies to those not in need and it can

help to make policies more effective.

3.5.4 It would be futile to draw up a final List of sectors or target groups

warranting support packages, since circumstances may change over time.

 $\label{eq:funding} \mbox{funding constraints will influence the range that can be considered}$

and needs vary between the different regions. The following areas $% \left(1\right) =\left(1\right) +\left(1\right) +$

and/or target groups seem particularly relevant, with emphasis
furthermore on enterprises owned or controlled by entrepreneurs
from

formerly disadvantaged communities:

- agro-businesses and small-scale farming and fishing
- small-manufacturers with focus on clothing, furniture/carpentry,

metal works, arts and crafts, etc.

- small-builders/contractors
- transport-sector operators (taxis, freight carriers, tour operators)
 - start-up and expanding enterprises owned by women and, in particular, women with children
 - small-exporters revealing comparative advantages
 - small-scale tourism-industry operators
 - youth self-employment (with the focus on school leavers and unemployed youth)
- self-employment start-up efforts by retrenched people and those in

resettlement areas

 $\ -$ rural business start-ups and expanding firms including the retail

sector

- physically disabled people involved in self-employment
- small-scale mining
- small enterprises in disaster areas
- SMMEs in ecologically sensitive activities small-scale hitech

ventures with a strong catalytic role

3.5.5 Depending on the response to these support possibilities the government might allocate an increasing share of the resources made

available for SMME support towards such integrated programmes. In all

cases the government will, however, only contribute part of the required programme funds and in doing this will also consider the

compliance of recipients with other principles embodied in this strategy framework. Detailed attention will also be given to the

development of effective implementation machinery for such sector $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

support programmes, and for strict controls in the use of funds.

3.5.6 Since the preparation of specific new programmes of targeted support

 $\ensuremath{\text{may}}$ take considerable time the government will consider financially

supporting preparatory research and/or part of the cost of pilot

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

by foreign donors and other support agencies in the $\ensuremath{\mathsf{SMME}}$ sphere.

3.5.7 Within the context of support targeting the category survival enterprises deserves particular attention, given its vast size and the

inability of most of the 'self-employed" people to improve their

position. Support can come from basically three directions, viz.

- RDP-related health, education, housing and other social-development

programmes

 $\mbox{-}$ efforts by formal (small as well as larger) businesses to draw these

- targeted SMME support packages related to one of the above categories Since many of the survivalists would rather be in employment than self-employment, improvements in their literacy and skill levels will get priority in the government's support. Table 2 Ten key principles underlying the government's national smallbusiness strategy 1 The strategy is based on a joint vision for big, medium and small business in South Africa. 2 All the segments of the small business sector - survivalist, micro-, small and medium enterprises - need attention. 3 The business efficiency and competitiveness of the whole small enterprise sector has to be developed, with due recognition of social, other compliance standards relevant to an internationally competitive economy. 4 An integrated support strategy has to give attention to both the supply and demand side of small business activities. 5 Black advancement in the enterprise sector is a key factor in all spheres of the strategy; special emphasis also falls on other marginalised or disadvantaged groups.

6 The scarcity of public funds demands careful prioritisation of

programmes and the skilful matching of different resources.

support

survival operators into the mainstream of business

7 Support policies will be sector-focused and targeted with application of public funds and full recognition of the market orientation of our economy. 8 The institutional framework for small business support has to be restructured in order to reflect the evolving institutional diversity, the provincial thrust of policy implementation and effective bottom-up and top-down co-operation and co-ordination. 9 Ultimate responsibility for the national strategy rests with the Department of Trade and Industry 10 The private enterprise sector, co-operatives, NGOs. business associations and foreign assistance programmes all have a critical role to play in an integrated small business strategy.

PART FOUR

Elements of the support framework The active promotion of SMMEs depends on the interaction of a wide range of actors in an equally wide range of support areas. It ranges from self-help activities of groups of small enterprises and the abolition of regulatory obstacles to the better co-operation between small and bigger enterprises with respect to subcontracting and the granting of direct financial concessions by central or provincial governments. In this section of the White Paper the focus is on support areas with greater or lesser degree of government involvement. It largely excludes a more detailed discussion of the many steps that are - or could be the private sector, by NGOs or local authorities. This focus on the role of government can easily create the mistaken impression that government

determined to follow a top-down, interventionist strategy of $\ensuremath{\mathsf{SMME}}$ support,

which would go against the principles outlined earlier. To prevent such

impression, some reference will also be made to the role of non-governmental sectors or agencies in specific support areas, without thereby

prescribing the nature of their support action.

The sequence in which the support areas are presented here does not imply a

ranking of their significance. As explained earlier, effective support will

often require a support package consisting of different policies, tailor-made for specific SMME target groups. Research and more detailed

planning about such support packages and programmes will be the responsibility of the DTI, together with the SBDA, provincial governments

and the support agencies; with the NSBC likely to comment on the outcome.

4.1 Creating an enabling legal framework

In order to formally recognise the importance given to the small-enterprise

sector in the process of economic reconstruction and development, and to

facilitate policy implementation in different areas, the government is

committed to pass a number of enabling acts. The experience from other $% \left(1\right) =\left(1\right) \left(1\right)$

(semi)developed countries in Europe, Asia and Latin America shows that

properly designed acts can play a positive role, as long as the purpose and

principles are clear and phasing-out dates are set for affirmative changes.

It is too early at this stage to detail the number of key acts needed to

create an enabling legal framework. Besides, in some cases changing market $% \left(1\right) =\left(1\right) +\left(1\right)$

behaviour in anticipation of legal steps may obviate formal legislation.

The following areas, however, warrant serious attention.

4.1.1 A national Small Business Act

This should give formal recognition to the government's involvement in

 $\,$ small business support. It could constitute the statutory base for

the SBDA and other statutory bodies in this sphere. In order to facilitate the differentiation of support, such an act should also

define the main categories of SMMEs and it could introduce the principle of automatic phasing out of developmental support (also

known as sunset clauses). The act will also have to address the principle of SMME membership of some (self-chosen) business association as precondition for their eligibility of state support.

This act could also incorporate an appropriate legal framework for

those co-operatively organised small enterprises which currently fall $% \left(1\right) =\left(1\right) +\left(1$

outside existing legislation on co-operatives.

4.1.2 A Transaction and Procurement Act

 $\mbox{\sc Market}$ access for small enterprises is a major issue in South Africa

as elsewhere in the world. Voluntary action by large enterprises,

parastatals and government departments can go a far way towards better $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

laying down certain conditions and principles - about set-asides for $% \left(1\right) =\left(1\right) +\left(1\right$

small enterprises, producers, non-discriminatory public-sector procurement rules and incentives for big business subcontracting to

small enterprises - could accelerate progress and lead to
 participation among all firms rather than only a few
progressive ones.

It could also highlight commitment needed from small enterprises and $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

the supply of support services.

4.1.3 A Small Business Finance Act

A new act, or the addition of relevant clauses to existing legislation, could address a number of fundamental issues regarding

the access to finance by SMMEs. This could include steps to encourage $% \left(1\right) =\left(1\right) +\left(1$

existing financial institutions to become more active in the SMME-market segments, the facilitation of deposit-taking by lender-NGOs, the recognition of certain non-conventional collateral

types and the widening of scope for more specialised lending and

investment institutions focusing primarily on SMME needs.

These are possible steps in three important areas. The unfolding of

support programmes may necessitate further enabling legislation, for

example in areas related to LSCS, training, taxation and labour relations. At the same time the government is committed to keep the

 $\ensuremath{\mathsf{small-business}}$ environment as $\ensuremath{\mathsf{market-orientated}}$ and unfettered by

burdensome legislation as it is practically possible.

4.2 Streamlining regulatory conditions

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

local level - is responsible for the legislative and regulatory
 framework and its ongoing adjustment, it is also its role to
assure

the appropriateness of these rules and regulations for the small-business sector.

All over the world, and certainly also in South Africa, there is $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) =\left$

discussion and frequently disagreement about the proper degree of $% \left(1\right) =\left(1\right) +\left(1\right) +$

regulation and deregulation in the business scene. Unduly strict $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left($

regulations often harm small and, in particular, emergent enterprises

and benefit the larger, established ones, whereas less regulation may $% \left(1\right) =\left(1\right) +\left(1$

lead to aggressive competition between market entrants, to the neglect

of worker interests, or to health hazards and environmental destruction.

4.2.1 Government is committed towards appropriate regulations, which are the

result of transparent, consultative processes, with all the interest $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

groups having a chance to state their interests and concerns, and with $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

national economic growth and job creation within the RDP framework the $\,$

overriding objective.

4.2.2 Based on this approach the DTI, in co-operation with the Competition

Board, will closely monitor and, where possible or necessary, $\operatorname{\textsc{co-}}$

ordinate and assist the regulatory reform process, with particular $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

emphasis on the following spheres:

 investigations by different central government departments and consultations with relevant stakeholders about the appropriateness of

existing and proposed legislation and regulations in the fields of

taxation, labour (including Industrial Council agreements), zoning and

building controls, tendering procedures, training requirements, health

and occupational conditions, etc., and how they can be made more $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

suitable for small enterprises;

- investigations by the Competition Board about possible small business

constraints inherent in our present competitive structure and how

these could be overcome, either through legislative changes or a more $% \left(1\right) =\left(1\right) +\left(1$

proactive enforcement of the board's recommendations; in addition to

the matters raised in section 4.1, attention will be given to the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

possible need for legislation to strengthen small enterprises in their $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

access to raw materials and other inputs controlled by monopolistic $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

suppliers;

- steps taken by provincial and local governments to reduce

legislative and regulatory conditions.

Through its support for Local Service Centres, the government \mbox{will}

also assure that attention is given to these important issues at

grassroots level and that close interaction is maintained between $% \left(1\right) =\left(1\right) +\left(1\right) +$

central government and grassroots needs. Furthermore, the DTI, in $% \left(1\right) =\left(1\right) +\left(1\right) +$

consultation with the SBDA and the Competition Board, will regularly

review progress in this important sphere and its assessment by $\ensuremath{\mathsf{key}}$

players in the small business sector.

4.2.3 It is generally known that small enterprises often find it difficult,

financially or for other reasons, to avail themselves of the due

 $\,$ process of law in order to defend their interests. The government is

 $% \left(1\right) =\left(1\right) \left(1\right)$ committed to facilitate feasible avenues of legal assistance that

could help level the legal playing fields for small enterprises, with $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

particular attention to those disempowered in the past on the basis of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

race or gender.

4.2.4 The government will also support steps to reform the current small-

claims-court system, with particular attention to

- increasing the number of court outlet points,
- raising the level of claims falling within its jurisdiction (to about R30,000),
- integrating it more closely with the legal framework, thereby
 (i.a.)

providing access to interdict procedures,

- enabling members of closed corporations to utilise the services of

the small claims court,

- strengthening co-operation with the Department of Justice.
- 4.2.5 Establishing a user-friendly environment also calls for the simplification and standardisation of documents. This includes:
 - business registration and licensing;
 - financial and loan applications;
 - purchasing and sub-contracting (tender) document;
 - export documentation and other commercial documents;
 - registration of contracts at fair-trading boards;
 - simplified tax return forms for small businesses;
 - the collection of industrial data and other statistics.

A task group is to be appointed from among relevant government departments and concerned parties to study and make recommendations

about the simplification of existing systems and to suggest improvements. Progress in this area will also be documented in the

annual SMME review.

4.3 Access to information and advice

Lack of access to appropriate, relevant and understandable information and

advice is one of the most important problems of small enterprises, in particular micro-enterprises, survivalists and small start-up enterprises.

Due to past discrimination and lack of opportunities this problem is ${\tt most}$

severe among black entrepreneurs.

The significance of this constraint is recognised all over the world. In

many of the more developed countries the bulk of government-funded assistance to the small business sector centres almost exclusively around

these needs. In South Africa some progress has been made with the preparation of information material relevant for small enterprises and the

dissemination of information and advice. Yet, to date the number of enterprises effectively reached remains small, compared to the vast number

of people involved in self-employment in both urban and rural areas. 4.3.1 As an operational principle, information and advice should be as

focused and sector-orientated as possible and it should be supplied at $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

grassroots level wherever this can be done. Responsibility for the $% \left(1\right) =\left(1\right) +\left(1\right)$

 $\,$ preparation and dissemination of relevant material falls on all the

agencies active in the SMME support sector, i.e. public, parastatal, $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2$

private and NGO, operating at the national, provincial and in particular local as well as sectoral levels.

4.3.2 With the help of the national small business strategy, government

wants to get business information and advice within reasonable distance to all enterprises and to those interested in self-employment.

The involvement of government will be guided by the following principles:

- The DTI accepts responsibility for the dissemination of both data

and information related to the national small-business scene, the $% \left(1\right) =\left(1\right) +\left(1\right) +$

strategy framework and the availability of support services all over $% \left(1\right) =\left(1\right) +\left(1\right$

the country. This will be done through an Annual Small Business Report or Handbook, which is to be produced in co-operation with the $\,$

SBDA.

- In order to facilitate the systematic spread of business-related

information and advice, the establishment of a decentralised, country-wide network of Local Service Centres (LSCs) is envisaged.

These will supply more than just information and advice, but that

particular function will be included in virtually all of them (see $5.8\,$

for more details).

 As a rule the government will not be directly involved in the preparation or dissemination of information and advice. The bulk of

this should be undertaken by private institutions, NGOs and $\operatorname{self-help}$

or group initiatives, with financial support as far as possible within

the constraints of the budget - largely limited to information seekers

unable to meet the cost of such services. Such support will primarily

be channelled via the LSCs.

4.3.3 In many cases the passive availability of information and advice is

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

operating as mentors and interacting regularly with advice seekers can

be very effective, especially if the advice is focused, the mentor has $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

entrepreneurs. Several mentor advisory schemes are already in operation. Some are working on a voluntary basis, some are funded

through parastatals, NGOs or local authorities while others are provided as part of corporate social responsibility. An increasing

number are directly or indirectly linked to normal business relations, $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

i.e. they are supplier-driven, consultancy-driven or banklinked, to $% \left(1\right) =\left(1\right) +\left(1\right)$

mention a few. It is expected and hoped that these mentoring relationships, which often evolve into more comprehensive partnerships, will further expand, without the need for substantial

 $\hbox{ financial support by the state. Where assistance is still } \\ \hbox{ necessary}$

to help emergent enterprises or the survivalist segment, it will also

be channelled through LSCs.

4.3.4 Reliable statistical information is important for the small business

sector, for small-enterprise support agencies and for the central as

well as provincial governments to monitor policy effectiveness and $% \left(1\right) =\left(1\right) +\left(1\right)$

facilitate forward planning. At present the statistical base is extremely poor with respect to most aspects of small-enterprise development in South Africa. The task to upgrade and regularly update

relevant trends cannot be the responsibility of government alone. The $\,$

 $\ensuremath{\mathsf{most}}$ effective approach will need the co-operation of the following

parties:

 The Department of Trade and Industry (Chief Directorate: Small Business), which - after consultation with all relevant parties
 will

determine the range of statistics to be prepared or monitored by

central government;

 Central Statistical Services, who should collect as much of the relevant data as is possible within the framework of its resources and

techniques;

- the SBDA, which should focus in particular on support programmes and $% \left(1\right) =\left(1\right) ^{2}$

related trends;

- provincial governments, development agencies and in particular the $% \left(1\right) =\left(1\right) +\left(1\right$

university-based small-business units, who will be encouraged to

closely monitor regional and local trends, within the broad national

framework set by the DTI;

- the Council for Scientific and Industrial Research (CSIR), which is

to be actively involved in the development of the LSC network;

- the private sector, responding to market needs for data or supplying

statistics on a contractual basis to public-sector organisations.

The envisaged Annual Report on Small Business will also contain a

summary and analysis of current trend data.

4.4 Access to marketing and procurement

Small-enterprises usually regard market constraints and the inability to

sell their products and services as one of the most serious obstacles to the $\,$

starting of businesses and growth beyond mere subsistence level. This perception is parallelled by many studies - in South Africa and internationally - which view market access as a critical factor in business

growth, in particular in the case of entrepreneurs from disadvantaged communities.

Responsibility for steps to overcome this constraint falls upon many different groups: individual entrepreneurs and groups of small businesses,

which have to compete with others for the same clients, local government and

business associations, who should reconsider regulations hindering \max

access of newcomers, the established business community, who should practise

what they preach by. opening up competition rather than controlling markets, and public-sector departments as well as big enterprises, who

should re-orientate procurement towards small-enterprise suppliers and $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

subcontractors. The government is committed to facilitate this $\operatorname{complex}$

process in a number of ways:

4.4.1 Encourage the Competition Board to take the necessary reform steps to

prevent restrictive practices vis-a-vis small enterprises and to make

the Competition Board more accessible to SMMEs;

4.4.2 consider steps which could include tax incentives, procurement quotas,

voluntary commitments, etc., to motivate the big-business sector to $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

systematically expand its links with small enterprises. In this respect sector-specific and localised efforts are likely to bear

better results and minimise confrontation, compared to national rules $% \left(1\right) =\left(1\right) +\left(1$

or guidelines;

4.4.3 propagate and encourage the simplification of tender procedures among

all public-sector and parastatal tender authorities, in order to make $% \left(1\right) =\left(1\right) +\left(1$

it easier for small enterprises to compete and eliminate gender bias;

several steps in this direction have recently been implemented; 4.4.4 further adjust public procurement practices at central, provincial and

local government levels, and by parastatals, in order to facilitate $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

the granting of some proportion of contracts to black-owned or

controlled enterprises, and encourage small-business tendering for $% \left(1\right) =\left(1\right) +\left(1\right)$

such contracts. In this context the efforts undertaken by the ${\tt Public}$

 $\label{thm:continuous} \mbox{Works Ministry and other government and/or provincial} \ \mbox{departments}$

within the RDP framework, to address the unemployment problem through $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

labour-intensive construction, are also of direct relevance to the $% \left(1\right) =\left(1\right) +\left(1\right)$

 $\,$ small-enterprise sector. As outlined in the RDP, attention will be

given, wherever practically possible, to the involvement of $\ensuremath{\mathsf{small}}$

and/or emergent (subcontractors. The DTI will encourage cooperation $% \left(1\right) =\left(1\right) +\left(1\right)$

between relevant departments as well as private-sector institutions $% \left(1\right) =\left(1\right) +\left(1\right)$

and NGOs to reach SMMEs and to mobilise training and mentoring support

for small contractors, so that they are able to tender successfully;

4.4.5 facilitate, where necessary the ability of small enterprises to meet

the conditions of such contracts. This will be done primarily through

the support of Local Service Centres and, in particular, business $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

linkage programmes;

4.4.6 encourage the development of more appropriate small-enterprise export-

support programmes, to either adapt, supplement or replace existing $% \left(1\right) =\left(1\right) \left(1\right)$

 $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1$

exporters. Such programmes could cover special finance schemes, exhibition facilities, new types of export trading houses, adjusted

export credit-guarantee schemes, an expansion of the export \max

assistance scheme and special training efforts. They should be sector-specific and locally focused, wherever this is feasible. 4.4.7 All of the above steps will only be effective if small enterprises at

the same time work hard to increase the quality of their goods and

services, diversify their product range in response to changing $\ensuremath{\mathsf{market}}$

opportunities and commit themselves to the development principles $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

embodied in this White Paper. Neither government nor bigger businesses can be expected to purchase products of poor quality or

inferior to other locally produced or imported products. To overcome $% \left(1\right) =\left(1\right) \left(1\right)$

these problems it is necessary to integrate supply and demand side $% \left(1\right) =\left(1\right) +\left(1\right)$

efforts in the small-enterprise sector, i.e. link the above steps $% \left(1\right) =\left(1\right) +\left(1\right) +$

with policy proposals related to training, finance, technological $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

assistance and sector-support programmes.

4.4.8 Closely linked to marketing and supply problems of SMMEs are issues

related to reasonable access to raw materials and quality services at $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1$

affordable prices. There are many ways of addressing these problems, $% \left(1\right) =\left(1\right) +\left(1\right$

including bulk purchases by clusters of firms or through sector associations, assistance to individual firms via extension networks

and the discouragement of supplier monopolies. Government favours ${\tt a}$

diversity of approaches, adapted to sector as well as regional needs.

Its support, if necessary, will be channelled through LSCs, business

opportunity centres and other linkage agencies focusing on particular

categories of enterprises.

4.5 Access to finance

In surveys among small enterprises all over the world, access to finance

comes out as one of the most urgently felt needs. This remains true even $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

though other problem areas (like marketing, technical skills, poor product

quality, weak management, etc.) often aggravate the financial position of

small enterprises and hamper their access to funds.

The financial needs of different types of SMMEs vary widely, with access

problems particularly severe in rural areas, among start-up micro-enterprises and among those owned or controlled by women as well as

other formerly disempowered groups, and in certain higher-risk business $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

categories.

The government is committed to strengthen the link between small enterprises $% \left(1\right) =\left(1\right) +\left(1\right$

and existing as well as evolving financial institutions, so that available $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1$

funds are channelled to areas where they are most urgently needed. Areas

for direct or indirect government and parastatal involvement in the financial sphere include the following.

4.5.1 Commercial banks

Not unlike other developed countries, South Africa's commercial banks have

in the past been reluctant to provide comprehensive services for the fragmented, risk-prone and geographically dispersed small-enterprise sector.

This applies in particular to black emergent enterprises, where apartheid

restrictions, forced removals, influx control, migrant labour and job reservation all militated against the gradual development of bank-client

relations in both the urban and rural areas. It is only logical, therefore,

that commercial banks have for long been reluctant to risk their clients'

funds through loans to and investments in black-owned or -controlled enterprises.

During recent years there are welcome signs that commercial banks are giving

increasing attention to the needs of SMMEs, with many innovative financing

schemes having been introduced to assist particular types of ${\tt SMME}$ clients.

Through the DTI and the SBDA proactive contact will be established with

commercial banks to become aware of their longer-run strategy within the RDP

framework of making banking services more accessible to township people and

black enterprises. These contacts should reveal areas where government

might consider more specific catalytic support or greater urge towards

affirmative action, with a Small Business Finance Act one of the options.

4.5.2 SMME-focused financing institutions

About a dozen former homeland development corporations (or their small

business subsidiaries), the SBDC and a few other specialised lending institutions like Get Ahead, the Informal Business Enrichment Centre (IBEC).

tried to fill part of the vacuum in SMME funding, with traditional schemes

like gooi-goois and stokvels also playing a significant role. These institutions are essential for the type of loans where the risk and transactional costs are still too high for conventional commercial banking

practice.

While government firmly believes that the primary source of finance and

related financial services for the small-enterprise sector should be the

established and newly evolving banking and financial-services sector,

that taxpayers' funds cannot be used to fill any major gap in the supply of

funds required by the small-business sector, some assistance seems necessary

to fill certain of the funding gaps that still exist.

Support is envisaged along the following lines, with details still to be

worked out in consultation with local institutions and foreign technical

advisors:

 $\mbox{-}$ initial start-up equity and overhead cost of these specialised agencies

has to come from local or foreign donors or through a government (marketing) grant

- concessionary (lower-interest) loan capital for on-lending has to be

provided by local or international wholesale financing agencies (like the $\,$

DBSA, the IDC or an evolving small-enterprise finance trust)

- commercial funding to supplement the other two sources, but at market-related interest rates
- $\mbox{-}\mbox{ongoing}$ subsidisation or matching grant finance for aftercare and other

support services necessary to safeguard the portfolios and fulfil a developmental role.

It is the long-run vision of government that over the years the grant and

concessionary funding share will decline and commercial funding of ${\sf SMME-focused}$ financing institutions will increase. In the meantime the

scarcity of government resources demands careful targeting of such concessionary and grant funding.

4.5.3 Micro-enterprise finance

In addition to the above institutions NGOs have over the past decade become

increasingly involved in the supply of micro-loans and related services to

micro- and survivalist enterprises. In the short run such schemes, which

are highly significant for certain segments of the SMME sector (e.g. the $\,$

rural and informal sector) are only sustainable with some grant funding

and/or if the micro-loans are combined with other partially sponsored support services.

Within its own funding constraints and with due recognition of the goals and

priorities stipulated in this White Paper, the government will continue to

supplement other donor agencies' efforts to help micro-enterprise funding

agencies. Much of this support is likely to be channelled along parastatal,

provincial and local government levels and in interaction with the private

sector. Major emphasis will also have to fall on capacity-building efforts

and the supply of seed capital.

4.5.4 Venture finance

The creation of equity funds to address the equity needs of SMMEs should be

private-sector-driven. The public sector will, however, assist in capitalising some of the funds targeted at disempowered entrepreneurs with

viable business propositions. This could best happen via ${\tt SMME-focused}$ financing institutions.

4.5.5 Credit guarantees

In order to strengthen the commercialised funding of SMMEs, the government

and relevant private institutions are developing an expanded and differentiated credit-guarantee system, which will be commercially run and

jointly funded. Such a system also offers scope for targeted additional

support to the disempowered, women and other categories of entrepreneurs.

4.5.6 Deposit-taking by lending NGOs

In order to strengthen their ability to mobilise funds for microloans and

other programmes, government will look into the feasibility of an expansion $\ \ \,$

of deposit-taking facilities towards approved NGOs.

4.5.7 Alternative collateral

Given the critical role collateral plays in the attraction of conventional

bank credit, attention will be given to the recognition of other types of

securities and collateral substitutes, especially in the rural areas where

land is communally held and with respect to women entrepreneurs.

4.5.8 Information on access to finance

In as far as lack of knowledge about available financing programmes or the $\ensuremath{\mathsf{C}}$

process of application constrains access for individual small enterprises,

the proposed national network of service centres can also play a significant

role. LSCs could also facilitate the establishment of special local lending

programmes as a form of joint action between financial institutions, parastatals, NGOs and local authorities or community groups.

4.6 The physical infrastructure

The development and financing of business and industrial premises (shops,

offices, factories, market stands, hawker shelter, etc.) and infrastructure $% \left(1\right) =\left(1\right) \left(1\right$

facilities, including the supply of electricity, water, telecommunication

connections, sewage, street lights, parking facilities, etc., is usually $\ensuremath{\mathsf{S}}$

seen as the responsibility of either the private sector or local authorities, rather than the government.

Yet, due to the past neglect of the needs of black townships and emergent $\ensuremath{\mathsf{E}}$

enterprises a serious backlog of even basic facilities has emerged in both

rural and urban area and has been identified in the RDP as one of the $\ensuremath{\operatorname{areas}}$

deserving special attention. Here we refer to the supply of electricity to

businesses, basic services and the road infrastructure in commercial

industrial areas, facilities for fresh produce and other markets, industrial

incubator structures, telecommunications, postal delivery services and

appropriate business zoning and planning processes.

Recent political changes, the prospects of less violence and crime in the

townships, and the gradual emergence of legitimate local authority structures have increased the chances for greater private-sector and local-authority involvement in the improvement of township business infrastructures. In addition, parastatals like Eskom and Transnet/Intersite

and the regional development corporations are increasingly involved in this

sphere, with funds solicited from wholesale financing institutions, regional

governments or foreign sources. Nevertheless, it seems likely that requests

and proposals in this sphere will figure prominently in local RDP committees, especially in the rural areas and in new urban townships. Government support will be guided by the following principles.
4.6.1 Given its limited budget, the DTI is not in a position to directly

channel funds for such projects. Its role will be the monitoring of $% \left(1\right) =\left(1\right) +\left(1\right)$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

co-operation between different government departments and levels of $% \left\{ 1,2,\ldots ,2,\ldots \right\}$

government, wholesale financiers, parastatals and the private sector. $\ensuremath{\mathsf{e}}$

4.6.2 Much attention has recently been given to the need for industrial

incubators (hives) and commercial premises at rentals affordable for $% \left(1\right) =\left(1\right) +\left(1\right$

emergent enterprises. These needs can be handled in different ways:

- The incubator (or industrial start-up premises), if not established

through private enterprise, can be viewed as a variation of LSCs, for $\,$

which structured support programmes can be developed.

 Existing suppliers of such accommodation, like the SBDC and the regional development corporations, have to consider the need for and

justification of rental subsidies and the feasibility of such subsidisation within their own funding as well as other possible

support programmes. The SBDC already has such a scheme, but this $\ensuremath{\mathsf{may}}$

need adjustments to strengthen its development impact.

 $\mbox{-}$ The DTI and/or provincial governments could investigate the scope

 $\label{formula} \mbox{ for an affordable system of start-up rental subsidies with sliding}$

scales of subsidisation for specific categories of emergent entrepreneurs (e.g. small manufacturers and rural hives). Such

scheme might also help motivate the private sector to construct more

incubators and other small-business premises.

4.6.3 Special attention has to be given to the planning and physical infrastructure needs of women entrepreneurs. This includes a flexible

planning approach towards home-based enterprises, the provision of

creche facilities close to businesses, and more public toilet facilities.

4.6.4 In the rural areas and many of the resettlement villages there is

often a critical shortage of built-up work spaces, combined with the $\,$

lack of access to electricity, water and telephones. Government matching-grant funding for physical infrastructure needs (mainly via

the RDP) may have to focus very strongly on these basic needs, together with efforts to improve transport to remote places.

4.6.5 High crime rates and continuing violence are serious obstacles to

small-business growth since they increase the risks for small enterprises and often cause major losses of stock, damage to buildings

or reduced turnover. Attempts by central, provincial or local authorities and other agencies to help establish peace in the townships and decrease the crime rate should also be seen as important

stimulants for SMME growth.

4.7 Training in entrepreneurship, skills and management

The acquisition of relevant vocational, technical and business skills is

generally regarded as one of the critical factors for success in $\ensuremath{\mathsf{small}}$

enterprises. In addition, literacy and entrepreneurial awareness are seen

as particularly important to enable people to advance from survivalist

activities into larger and better earning enterprises. With the rapid expansion in the range and number of small enterprise all over the country,

South Africa faces a daunting challenge in the sphere of small-business-orientated education and training.

Responsibility for education, training and experience transfers rests on a

wide range of institutions, including the central and provincial tiers of

government, NGOs, parastatals and the private sector. This also applies to $% \left\{ 1,2,\ldots ,2,\ldots \right\}$

the sphere of entrepreneurship sensitising, the training in skills relevant

to small enterprises in different sectors and industries, and the acquisition of management experience by small-business owners and staff.

During the past few years the range of training programmes made available $% \left(1\right) =\left(1\right) \left(1\right)$

for and relevant to small businesses has expanded considerably. In fact, a $\,$

general lack of awareness about the spread of already existing facilities $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

and what they offer the small-enterprise sector or those interested in a

business career, constitutes one of the shortcomings of the whole training

process

Bearing in mind the diversity of SMMEs and the wide range of training suppliers, the governments sees the following challenges as core elements

in a national training strategy for small enterprises.

4.7.1 Knowledge about presently available training programmes has to be

disseminated more effectively to reach entrepreneurs all over the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

country. Such information should also help match particular needs and $% \left(1\right) =\left(1\right) +\left(1$

specific training programmes. The planned national grid of LSCs should play a significant role in this process.

4.7.2 School curricula and other school-related activities should give more

scope for the inculcation of entrepreneurial attitudes and a $\ensuremath{\operatorname{\mathtt{general}}}$

awareness about self-employment opportunities.

4.7.3 All suppliers of training have to reconsider the nature, content and

effectiveness of their programmes, taking into account the $\ensuremath{\mathsf{small-}}$

business environment in the different sectors of the economy and $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

working closely with the business sector. Thus, training has to become far more sector-specific, focusing on the particular needs and

 $\,$ practical problems of small enterprises. Different programmes will

have to be developed for i.a.

- survivalist entrepreneurs lacking even basic literacy
- $\mbox{-}\mbox{micro-enterprises}$ in rural areas, where language capabilities are

critical for the absorption of experience

 women entrepreneurs wanting to focus on particular issues and problem areas and needing particular time considerations to match home

duties and training

- business and skill needs in sectors like construction, manufacturing, small-scale agriculture, tourism, etc.
- self-employment problems experienced by the youth, where the emphasis will have to fall on awareness about opportunities and development paths

In addition, training should in general help to break with traditional

gender roles in business and skill categories.

4.7.4 Training programmes have to be modular, so that trainees can combine

training from different institutions. Linked to this is the need for $\ensuremath{\mathsf{T}}$

some accreditation of small business-related programmes, in order to $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

 $\,$ protect trainees and allow training paths. A two-pronged strategy

will have to be considered by the relevant institutions, after broad-based consultation:

- greater concern for SMME-related training needs and programmes in $% \left(1\right) =\left(1\right) +\left(1\right)$
 - the activities of established industry training boards and
- the establishment of a new Informal-Business Training Board to give

particular attention to training issues related to micro- and survivalist enterprises which are unlikely to be addressed by the

levy-funded Industry Training Boards. This would include issues like $% \left\{ 1,2,...,n\right\}$

certification, accreditation, matching grants and better coordination of these training efforts.

4.7.5 Raining incentives of different government departments have to be

coordinated more effectively. This will have to include the $\operatorname{manpower}$

training programmes funded by the Department of Labour for the unemployed, those linked to RDP-funded labour-based construction

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

SMMEs.

4.7.6 Serious attention has to be given to the staff training needs of $\ensuremath{\mathsf{SMME-}}$

support agencies, in order to expand their capacity to handle the $% \left(1\right) =\left(1\right) +\left(1\right) +$

challenges emanating out of this White Paper. Responsibility for this $% \left(1\right) =\left(1\right) +\left(1$

 $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right$

the small-business units attached to some universities, as it rests

with the broader training community. Once again, the needs of $\ensuremath{\text{rural}}$

areas and small, community-based NGOs trying to support microand $\ensuremath{\mathsf{S}}$

survivalist enterprises have to be addressed proactively.

4.7.7 Parallel to more training efforts it is necessary to expand applied

research about problems, needs and development trends in South Africa's SMME sector, and about developments in southern Africa.

These efforts should occur in close co-operation with tertiary education institutions, the business sector and relevant parastatals

and government departments. Given strong interest among foreign donor $% \left(1\right) =\left(1\right) +\left(1$

agencies and other institutions in this element of South Africa's

development process, the mobilisation of research funds and the arrangement of joint projects should not be too difficult.

4.7.8 In tandem with increased training there is also need for the rapid

expansion of business-mentorship systems of the type developed in the $% \left(1\right) =\left(1\right) +\left(1$

but also new approaches like small-industry extension workers. These

schemes should include general, volunteer-type mentorships as well as

 $\,$ sector- or industry-focused technical and business mentoring, with the

cost shared by different stakeholders. The government will channel

its support primarily via LSCs.

4.7.9 Another important avenue for intensive experience exchange are business internships and traineeships for SMME managers at well-run

enterprises. This approach, which is comparable to apprenticeships

emphasised so much in other countries, also has to be expanded rapidly

in South Africa, with particular focus on black and women entrepreneurs. Franchises, joint ventures and other types of partnership agreements can play a similar role and should also

expanded further in South Africa.

4.7.10 Although the main thrust in all these spheres has to come from the

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

order to help co-ordinate initiatives and work out a new approach $% \left(1\right) =\left(1\right) +\left(1\right) +$

towards limited financial support for SMME-focused training, an institution closely linked to the SBDA will be established as soon as

possible.

be

4.8 Industrial relations and the labour environment

The relationship between labour and small enterprise is complex and open to

frequent misunderstanding. At one level – survivalist activities and the $% \frac{1}{2}\left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2$

majority of micro-enterprises there is little difference between the worker

and the enterprise; earnings generated by the enterprise, net of direct

expenses for material and other inputs, are identical with the remuneration

of the operator, who is usually also the owner and the only worker. In

fact, the majority of these micro-enterprises employ no outside labour; at

best they engage other family members and relatives, with individual rewards

entirely dependent on earnings and the needs of the household. Any improvement in the business will improve net income and the earnings of the

household.

With respect to small and medium enterprises there is widespread belief that

the relationship between labour and enterprise is adversarial, i.e. owners/operators want to keep labour's remuneration as low as possible in $\ensuremath{\mathsf{N}}$

order to be able to compete with larger enterprises. Linked to this perception is an antagonistic attitude vis-a-vis industrial councils, trade

unions, the Department of Labour and other authorities, which are alleged to

artificially increase the cost of labour – thereby endangering the competitiveness of these enterprises.

A view more in line with the RDP and modem international thinking holds that $% \left(1\right) =\left(1\right) +\left(1\right$

more egalitarian labour relations in SMMEs and a participatory style of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right)$

management, combined with deliberate attempts to improve the skills base

results in higher levels of productivity, which enhances the competitiveness

of enterprises. Similarly, steps to safeguard the basic interests of workers should not be confined to the rigid enforcement of existing

industrial council agreements but should seek to develop the industrial

relations system in such a way as to take into account the needs and interests of small enterprises.

In working towards such a new dispensation for labour in small enterprises,

government will support reforms in the following areas.

4.8.1 The particular needs and interests of small enterprises should be

accommodated through greater flexibility and simplicity in the present $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

exemptions from industrial council agreements, or a dual system of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

collective bargaining, industrial councils should become more representative of the different industries, including the small-enterprise segments. Agreements should be negotiated to

provision for the needs and interests of small enterprises. 4.8.2 Government will support initiatives for encouraging a greater degree

of organisation of workers and employers in this sector as well as

voluntary participation by employers in collective bargaining. 4.8.3 Where industrial councils do not exist, or collective bargaining is

not feasible, government would like to see other appropriate ways

evolving to safeguard minimum labour standards. In fact, adherence to $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

certain basic standards may in future become a condition of eligibility for concessionary finance and other services. Attention

will also be given to support programmes to address specific shortcomings in basic standards.

4.8.4 Where appropriate, survivalist enterprises should have beneficial

access to the services provided by LSCs in the labour sphere. 4.9 Access to appropriate technology

Just like training, finance and business premises, technology is often seen

as an important factor influencing the success of small enterprises,

always accessible to them. This applies to both ends of the technology

 $\ensuremath{\operatorname{spectrum}}$, viz. sophisticated technology needed for the competitiveness of

small enterprises in the modern manufacturing and services sectors, and

"appropriate' technology for small enterprises operating in the labour-intensive, low-skill spheres. Both of these areas deserve more attention and may justify some government support.

4.9.1 Over the past few years a number of institutions have started to focus

on the technology needs of small enterprises, with the CSIR the most $% \left(1\right) =\left(1\right) +\left(1\right$

important parastatal. The DTIs Support Programme for Industrial Innovation can also be used for this purpose, as could research sponsored by the Foundation for Research Development (FRD) and

more

make

the SMME-related issues and technical research. In fact, the time $% \left(1\right) =\left(1\right) +\left(1\right) +$

seems ripe for a well propagated, multi-year programme, spearheaded by

the CSIR, involving all the relevant bodies, both public and private, $\ensuremath{\mathsf{c}}$

to systematically address small-enterprise needs in the field of $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

appropriate technology. Much of this will, however, have to be implemented in the context of specific industry or sector programmes.

Financial commitments of the state will have to await the preparation $% \left(1\right) =\left(1\right) +\left(1$

of detailed proposals based on broad consultation. Significant resources may also be forthcoming via foreign donor programmes and

private-sector involvement.

4.9.2 At the grassroots level the proposed network of LSCs would seem to be

the best channel to filter technology information through to individual small enterprises and to identify needs that warrant subsidised research. Even here the focus should, as far as possible.

be sectoral, giving special attention to the particular economic

structure and sector specialisation in each LSC neighbourhood. For

example, in the rural areas a lot of emphasis will have to fall on

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

technology.

4.10 Encouraging joint ventures

The needs of small and medium enterprises are often so complex that even a

comprehensive range of support services cannot do justice to all the requirements. The most effective way to acquire experience and skills,

enter new markets, structure additional financing and meet market competition is quite often the entering of a joint venture with an experienced local or foreign partner. This can happen among small numbers

of co-operative partners, it can be a black/white partnership, a big business/small enterprise link-up, a franchise relationship or some three-pronged foreign/local venture. Lately, there has been increasing

interest in black/white partnerships and joint ventures incorporating foreign trade or investment partners.

In other developed countries such joint ventures are far more prevalent than $% \left(1\right) =\left(1\right) +\left(1\right$

in South Africa, where racial segmentation, oligopolistic exclusiveness and $% \left(1\right) =\left(1\right) +\left(1\right)$

sanctions as well as disinvestment have prevented such developments in the $\ensuremath{\mathsf{I}}$

past. Lack of experience and the effect of economic stagnation have

strengthened distrust around joint ventures in the past.

Political changes and the dawn of a new economic strategy, with its emphasis

on exports, international competitiveness and co-operation at all levels,

are currently generating strong interest in joint ventures, with particular

attention to black-owned or -controlled enterprises. This interest, and the

active involvement of foreign donor agencies and larger investment groups in

the facilitation of such ventures, suggests that there may be no specific

need for public funds for that purpose. This, however, should not preclude

parastatals, like the IDC, the SBDC and the regional development corporations, from taking up shares in joint ventures, either directly or in

trust for local partners unable as yet to fund the purchase of shares, or $% \left(1\right) =\left(1\right) +\left(1\right) +$

from other types of supportive involvement.

Since there still exists considerable suspicion and fear about the risks and

possible disadvantages of joint ventures and co-operative enterprises, Local

Service Centres might be used to channel information about joint ventures

and other types of partnerships, and facilitate networking at grassroots

level. In addition, the government will explore the need and scope for an

appropriate coordinating mechanism to ensure that foreign joint-venture

initiatives give due attention to black partners, contribute effectively to

capacity building among emergent enterprises and fit in generally with the $\,$

RDP framework.

4.11 Capacity-building and institutional strengthening

As in other areas of the socioeconomic development process organised business has an important role to play in the strengthening of small business interests. This relates as much to business organisations operating

at national and sectoral level, as it applies to those focusing on the $% \left(1\right) =\left(1\right)$

provincial and local level. Of particular concern are those organisations

that represent the interests of emergent small, medium and microenterprises.

Compared to the more developed countries, South African business organisations are financially weak, and most of them have a very limited

capacity to actually support and strengthen small businesses. A high degree

of fragmentation further weakens these institutions, with the legacy of

apartheid all-pervasive.

In some countries the government has brought about unity, more effective

compliance to development policies and greater financial strength of organised business through compulsory membership of a national body and the $\ensuremath{\mathsf{C}}$

delegation of certain statutory functions to these associations. This government is very concerned about the fragmentation and relative

weakness of existing small-business associations. At the same time it respects the autonomy of organised business, which looks back on a long

tradition of voluntary membership and demand-driven services. Against this background the government would like to consult with all relevant stakeholders about developments in, among others, the following

directions.

- 4.11.1 Each SMME should be a member in at least one business-related association of their own choice.
- 4.11.2 There should be freedom of association, combined with the development

of a system of voluntary accreditation (at provincial or $\operatorname{national}$

level) for business associations wanting to be eligible for any type $\ensuremath{\mathsf{L}}$

of government support or involvement in the government's ${\tt SMME-support}$

strategy. Through such accreditation minimum standards would be set

with respect to accountability and transparency.

- 4.11.3 Associations with significant support will be eligible for representation on the envisaged NSBC.
- 4.11.4 Accredited business associations can operate as LSCs, if they maintain the services related to different types of LSCs.
- 4.11.5 Accredited business associations can also supply other services which

qualify for financial assistance, like training programmes for particular target groups, micro-enterprise support schemes, raw material acquisition schemes, etc.

4.11.6 The DTI, SBDA or provincial SMME desks can use accredited business

associations to implement any of the support policies. This is more $% \left(1\right) =\left(1\right) +\left(1\right)$

likely to occur in rural areas. Such involvement should make

associations eligible for capacity-building support.

4.11.7 Existing business associations should be encouraged to adjust their

member base and member services, in order to become more representative and inclusive in terms of gender, race, size of business, degree of informality and controlling structure.

4.11.8 All accredited business associations should be actively involved in

the planning, implementation and monitoring of SMME-related development strategies at local and provincial levels, with particular

 $% \left(1\right) =\left(1\right) \left(1\right)$ emphasis on the needs and capacities of the different economic and

business sectors.

4.11.9 Small enterprises should be effectively represented at all tripartite

socioeconomic and RDP-related forums.

4.12 Differential taxation and other financial incentives Over many years representations have been made for the differential treatment of small enterprises in order to reduce their tax burden and facilitate the reinvestment of small-enterprise profits, which are often

the only basis for new investments or the expansion of existing small enterprises.

South Africa's tax system is currently under investigation by the ${\tt Katz}$

Commission on Tax Reform, with several of the proposals contained in the $\ensuremath{\text{T}}$

Interim Report (dated 18 November 1994) applying to small enterprises. In

rejecting several of the requests put forward to the commission, it argued

that too wide a range of tax concessions or concessions offered to poorly

defined segments of the business community will lead to large-scale $\ensuremath{\text{tax}}$

avoidance and loss of state revenue.

Without committing government at this stage or entering a debate about the $\ensuremath{\mathsf{L}}$

merits of different proposals the following list includes suggestions $\ensuremath{\mathsf{made}}$

to the DTI for consideration by the tax authorities at this or some later $\ensuremath{\mathsf{I}}$

reform stage. Some of the proposals are alternatives to non-tax support $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

policies, which could have been included in the respective earlier sections

of this part of the White Paper. Concluding the list are a few other financial incentives that warrant reconsideration under the appropriate programmes.

4.12.1 For many years there have been representations for a lower

corporate taxes for small enterprises, comparable to the situation in $\ensuremath{\mathsf{S}}$

the United States and in several other countries.

4.12.2 An alternative to the above is the exemption of a minimum amount of

profit from taxation, in order to encourage reinvestment.

- 4.12.3 More generous depreciation allowances could have a similar effect to
 - a tax-free profit level.
- 4.12.4 Exemptions to or rebates from import duties on manufacturing inputs

and capital equipment could be important to re-exporting small businesses (like boat builders) where significant cashflow is tied up

in import duties.

4.12.5 With the cost of tax compliance often quite substantial for small

enterprises, it has been suggested that higher write-offs could be

granted for expenses incurred, The same has been suggested for training, research, technology transfer and export marketing expenses.

4.12.6 To stimulate subcontracting by larger firms and greater volumes of

loans to small enterprises by the banking sector, tax incentives have

also been proposed. This could similarly apply to profitorientated $% \left(1\right) =\left(1\right) +\left(1\right)$

research, consultancy, training and technology transfer institutions $% \left(1\right) =\left(1\right) +\left(1\right$

who are to be encouraged to shift their focus to $\ensuremath{\mathsf{SMME}}\xspace-related$ issues,

even though those clients are not able to afford the same fees. $4.12.7~{\rm Tax}$ incentives have also been suggested to help overcome the gender

bias of larger firms and service establishments $vis-g-vis\ SMMEs$ owned

by women.

4.12.8 A different type of proposals relates to the normalisation of $\ensuremath{\text{tax}}$

arrears of SMMEs, including those involved in VAT, income tax, import $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

duty and other tax non-payments. As in the case of bond and $\ensuremath{\operatorname{rental}}$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

successfully, such a normalisation might open the gate to far higher

future levels of tax compliance, especially if the transition happens $% \left(1\right) =\left(1\right) +\left(1$

during an upward phase of the business cycle and coincides with other $% \left(1\right) =\left(1\right) +\left(1$

 $\,$ SMME support action. To strengthen future compliance, eligibility for

all public-sector support would be made conditional to such compliance.

4,12.9 At local authority and Regional Services Council (RSC) level the

differentiation of rates and user charges could also be an instrument

for the promotion of small enterprises.

4.12.10 In the industrial sector the industrial-development incentives

granted under the Regional Industrial Development Programme (RIDP) $\$

have for many years largely excluded small enterprises. More recently $\ensuremath{\mathsf{N}}$

an adjusted set of simplified incentives (Small Enterprise RIDP/SRIDP) $\$

has been made available to smaller enterprises, without attracting $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right$

 $\,$ vast numbers of applications. Where the RIDP is as a whole under

reconsideration, the particular needs of small-scale manufacturers may $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

call for a totally different application of funds available for that $\ensuremath{\mathsf{T}}$

sector. The DTI is currently negotiating the transfer of the ${\tt SRIDP}$

allocation to the Directorate for the targeted assistance programme.

4.12.11 The same remarks about the RIDP can apply to export incentives

provided under GEIS and the EMA scheme to small-scale exporters. To $\,$

reach a large number of SMMEs, a sector or niche-focused export-facilitation process may be far more economic than cash

payments to a few applicants.

4.12.12 Finally, direct funding supplied to accredited training institutions

under the Department of Labour's unemployed training programme has

been criticised on the same grounds. If channelled through provincial

 $\ensuremath{\mathsf{SMME}}$ desks, sector associations, regional development corporations or

other sector-focused channels more effective use may be made of those $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1$

funds.

Government is interested to have all of these proposals and issues $% \left\{ 1,2,\ldots ,2,\ldots \right\}$

discussed in the relevant bodies, including the NSBC. As far as the $\,$

Katz Commission's proposals in the Interim Report are concerned, the $\,$

following two are particularly relevant to SMMEs:

- a non-compulsory once-off tax amnesty;
- further investigation should be undertaken on the possibility of

initiating an incentive for investment in small firms, similar to the

UK Business Expansion Scheme.

._____

small

PART FIVE

Institutional reform

The responsibility for support and assistance to medium, small, micro- and

survivalist enterprises falls upon a wide range of organisations, associations or agencies. They include all levels of government, a whole

range of parastatals, a large number of NGOs and community-based organisations (CBOs), the full spectrum of business associations, an increasing number of private institutions and several foreign donor agencies. The commitment to this national strategy and the degree of

operation between all these organisations largely determines the effectiveness of our national small business-support system, which was seen

as being critical for the rapid unfolding of the South African small-enterprise sector.

The government has no intention to curtail this diversity of support agencies, but it has every intention to make sure that scarce public resources are channelled in the most effective way through this system.

This section outlines an institutional framework designed to achieve these $\ensuremath{\mathtt{goals}}$.

5.1 The Department of Trade and Industry (DTI)

5.1.1 Within the national government the DTI is the coordinating body for

all policies related to the small business sector and for all SMME-support programmes directly or indirectly assisted by the government. It is also responsible for the co-ordination of

business strategies pursued by the provincial governments within the $% \left(1\right) =\left(1\right) +\left(1\right$

national policy framework.

5.1.2 A Chief Directorate for Small Business will be established in the

department, to incorporate the existing unit for small business and to

be responsible for all matters related to the government's support for $% \left(1\right) =\left(1\right) \left(1\right)$

small, medium, micro- and emergent enterprises.

5.1.3 Co-operation between different government departments in matters

relating to small business support will be monitored by the DTI, using $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

appropriate channels and committees. An Interdepartmental $\ensuremath{\mathsf{Committee}}$

on Small Business has already been established.

5.1.4 Given the growing importance of foreign investment to South Africa -

also to the small-business sector — the DTI Chief Directorate will

 $\mbox{\sc maintain}$ close links with the Investment Centre recently proposed by

the department.

5.1.5 With only a small staff the Chief Directorate will rely on the close

co-operation with the NSBC, the SBDA, the provincial SMME desks and $\,$

regional development corporations to further detail, plan and implement the different support strategies outlined in this White

Paper. This will always be done in close interaction with the $\ensuremath{\mathsf{SMME}}$

sector itself and its representative bodies.

5.1.6 The DTI will maintain strict control over organisations receiving or

channelling public-sector funds for small business support. Each $\,$

 $\ensuremath{\text{project's}}$ funding will be based on agreed upon Terms of Reference and

a Memorandum of Understanding. Monitoring and evaluation on an input/output basis will be done at the end of specific project phases,

and will be based on mutually agreed and objectively verifiable indicators. Recipients of financial support will be under contractual

obligation to utilise the funds strictly within the framework of the

respective programmes.

5.1.7 At the end of each financial year the DTI will conduct a detailed

evaluation of 20 per cent of the organisations who receive $\ensuremath{\operatorname{financial}}$

support from the public sector. The organisations will be ${\tt randomly}$

selected. The evaluation will be conducted by the DTI itself or by an $\,$

appointed agency. Sufficient funds will be allocated for the evaluation of programmes.

5.1.8 In Part Seven of this White Paper future funding options for the

strategy outlined are briefly discussed. The bulk of the public funds

are likely to be channelled through this department.

5.1.9 The department, in co-operation with the SBDA, will prepare an Annual

 $\,$ Small Business Review, to be tabled at the NSBC and in parliament.

This document will, among others, outline progress made over the year $% \left(1\right) =\left(1\right) +\left(1$

in the different problem areas and with all the support programmes.

It will also set bench marks for progress in South Africa's $\ensuremath{\mathsf{SMME}}$

sector and try to quantify macro trends. The first review will also

contain a summary of the March 1995 conference and should appear by $\,$

mid-1995.

5.2 The National Small Business Council (NSBC)

5.2.1 Given the wide diversity of support agencies, business associations

and public-sector bodies involved in support of and assistance for $% \left(1\right) =\left(1\right) =\left(1\right)$

small enterprises, and given the complexity of the small business $% \left(1\right) =\left(1\right) +\left(1\right) +$

sector, it has been agreed upon that an inclusive National ${\tt Small}$

Business Council be established as soon as practically possible, most

likely within the broader ambit of the National Economic Development

and Labour Advisory Committee (Nedlac), The NSBC will, in close co-

operation with the DTI, sanction the national small business-support $% \left(1\right) =\left(1\right) +\left(1\right$

 $\label{eq:framework} \mbox{ and become an effective national sounding board of small}$

business interests and concerns.

5.2.2 Initial proposals for the role, functions and composition of the NSBC

the council will be autonomous of government and consultative in

nature, but it will operate in close interaction with relevant

as well as provincial government departments.

5.2.3 Organised business, NGOs active in the SMME sphere and parastatals

involved in support for small enterprises will also be represented on $% \left\{ 1\right\} =\left\{ 1$

the NSBC, which is likely to meet at quarterly intervals.

5.2.4 The SBDA will provide the secretariat for the NSBC.

5.2.5 The provincial governments will be represented on the NSBC; it will,

however, be left to them to decide what other consultative bodies they

establish at provincial level to co-ordinate and steer small business- $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

support activities.

5.3 The Small Business Development Agency (SBDA)

5.3.1 In order to co-ordinate and facilitate the implementation of the

different strategy areas that form part of the national small-enterprise strategy, the government will establish a new Small Business Development Agency, operating separate from the DTI though.

closely linked to it.

5.3.2 The SBDA will consist of a number of autonomous operational units or

subsidiaries, with each an executive director at the head. Some of

these units will be located at the agency headquarters, whereas others $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

could be located in other provinces or towns.

5.3.3 The agency will be a not-for-profit entity, with a board of directors

not exceeding 16, including the chief executive officers of all the $% \left(1\right) =\left(1\right)$

operational units as executive directors and a small number of external non-executive directors, including the Chief Director for

small businesses of the DTI as well as directors representing $\ensuremath{\mathsf{key}}$

stakeholder groups.

5.3.4 While details about the SBDA are still being worked out and under

consultation, the following operational units seem likely to evolve:

- a Property Trust (taking over some of SBDCs property assets)
- an SMME Finance Trust
- a co-ordination unit for Local Service Centres
- a credit-guarantee facility (taking over SBDCs credit-guarantee scheme)
- a unit to co-ordinate sector-support programmes
- an SMME export-support programme
- a Training and Information Unit
- a Programme Development and Administration Unit (the core unit, which also includes the NSBC secretariat)
- 5.3.5 Each of the SBDA units will be funded differently, in line with the

nature of the activities. Initially, public-sector assets taken over

from the SBDC will constitute the financial base of some of the units, $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

with others funded by donor contributions or allocations from the $\ensuremath{\mathsf{DTI}}\xspace$.

The principle of differentiated funding and unit-autonomy will also be

 $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left($

financed through the DTI. In this way each of the units will have to $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

explore the full range of financial resources and adjust its activities according to its means.

5.4 Wholesale funding agencies

A number of national development agencies have in the past played a significant role in the provision of capital and recurrent funding for

small-enterprise support programmes. In some cases, like the IDC and the

South African Foreign Trade Organisation (Safto), these programmes have been

implemented directly by these bodies, whereas others, like the DBSA,

Independent Development Trust (IDT) and Kagiso Trust, channelled their funds $\,$

through provincial or local implementation agencies which can be viewed as

"retailers". The latter included regional development corporations (like

Transido, KFC, BNDC, CSBC, etc.), NGOs and CBOs.

The Small Business Development Corporation operated both as wholesaler $\,$

(channelling some of its funds to NGOs) and as retailer (at times even

considering loan funds from the wholesalers).

While the government is keen to see some rationalisation and streamlining of

the complex structure of national, regional and local funding and implementation bodies, the present structure can only change gradually. It

is therefore foreseen that the wholesalers will continue to supply concessionary funds for implementation agencies at regional and local level.

At the same time, close co-operations between the SBDA units and these

wholesalers should help to bring about a gradual streamlining of the funding

process.

5.5 Restructuring the SBDC

Since the release of the Discussion Paper in October 1994, considerable

progress has been made to restructure the SBDC on a basis acceptable to $\ensuremath{\mathsf{kev}}$

shareholder groups, including the government. While details are being worked out, the likely changes most relevant for this White Paper can be

summed up as follows:

5.5.1 The corporation will continue to exist as a private-sector-dominated

partnership of government and the corporate sector.

5.5.2 The SBDC will narrow the focus of its activities to the financing of

viable small enterprises.

5.5.3 Programme funds made available to the SBDC over the past decade (but

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

with the SBDA to be the main channel.

5.5.4 The SBDC will co-operate with the establishment of the different SBDA

units, providing technical and other support and assisting in the $% \left(1\right) =\left(1\right) +\left(1\right) +$

operational running on an agency basis as long as this is required.

5.5.5 The government's shareholding of the SBDC will be held by the SMME

Finance Trust, which will also be able to operate as a wholesaler for $% \left(1\right) =\left(1\right) +\left(1$

other SMME finance agencies.

5.5.6 The SBDC will continue as a national institution with a regional

office network. The extend to which this network of $\operatorname{\text{\rm six}}$ regional

offices will expand to cover every province or be reduced in order to $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

allow other regional development corporations to take over some of the $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

functions, will be determined by developments at provincial and national level.

5.5.7 Regional committees will be transformed into regional boards, with the

composition of the board to include provincial development agencies, $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

the provincial government and the private sector.

5.5.8 The SBDC's organisational structure, finance policy and management

culture will be reformed, in particular with respect to

 the composition and powers of various committees and board structures; the highest decision-making structure will have to reflect

its target group;

- the composition of the loan book; it has to move away from a 30/70

structure of black/white loan volumes;

- the structure of the corporation's senior staff.

A compromise along these lines should safeguard the continuation of $% \left(1\right) =\left(1\right) +\left(1\right)$

SBDC services, yet allow a new national and regional structure to $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left($

evolve over the next two years. At the same time it should be clear

that in future public-sector support funds will be channelled strictly

in accordance with the principles established in this White Paper. $\,$

Where appropriate, the SBDC will be used to implement such programmes,

just as other organisations capable to do so will be used. 5.6 Small-business support at provincial level

5.6.1 This White Paper has outlined a national strategy to support small

enterprises, based on the explicit understanding that responsibility

for such support is shared between national and provincial governments. In fact, it has been stressed that the devolution of ${\sf of}$

responsibilities goes much further, with attention falling increasingly on the local level of government and non-governmental

agencies.

5.6.2 Responses to the Discussion Paper indicated that provincial governments, regional development corporations and organised business

 $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right)$ feel strong about their partnership role in the shaping of support

policies and their adaptation to local and provincial needs and circumstances. Such differentiation is plausible and can be achieved,

but it also has distinct risks and limitations. Thus,

- much of the funding for SMME support at provincial level, including

the provision of share capital for development corporations, will have

to come from central government;

- certain of the publicly funded programmes - like export subsidies,

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

to be uniform for all the provinces in order to prevent confusion

and/or competitive "bidding' for higher incentives;

- not all the provinces have the capacity to develop "own" programmes

and effectively control their implementation;

- costly overlaps of programmes and implementation staff should be $% \begin{array}{c} {\rm and} & {\rm one} \\ {\rm one} \end{array} \label{eq:costly}$

prevented.

5.6.3 Thus, much of the policy implementation will be planned at national

level (by the DTI or the SBDA units), with the active and continuous $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

participation of provincial representatives, but it will be operationalised at grassroots level through a whole range of organisations. Regional development corporations and regional SBDC

offices may be the most suitable bodies for some of the implementation $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left$

tasks, whereas existing or new training bodies may be suitable for

others, Local Service Centres for another few, and so on. $5.6.4~{\rm It}$ follows from this approach that the provincial SMME desks, which

have been proposed in the Discussion Paper and which are likely to

evolve from now on, will remain small, with their main focus on the

effective linking of national or sectoral programmes and local or $\frac{1}{2}$

regional implementation bodies. They should also facilitate forum-type contact between all the SMME stakeholders in the provinces $\,$

and channel their grievances or proposals to relevant implementation $% \left(1\right) =\left(1\right) +\left(1\right$

or policy-making bodies. Through their representation on the $\ensuremath{\mathsf{NSBC}}$ the

 $\,$ SMME desks are, in fact, playing a critical role in assuring the

grassroots orientation of our national SMME strategy.

5.6.5 Each of the provinces has one or more development corporations focusing (i.a.) on the needs of small enterprises. The future relationship between these bodies has to evolve in the light of regional needs, the relative significance of each and the existence of

other bodies, like the SBDC, IBEC, Get Ahead, etc. In several provinces the merger of existing development corporations is currently

under consideration. Where all the shares are held by the state (formerly the homelands and now the provincial governments) such steps

are logical, even though top-down mergers do not necessarily improve

operational efficiency or strengthen the focus of operations. Thus, $% \left(1\right) =\left(1\right) +\left(1\right)$

it is possible that other considerations — like the involvement of the $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1\right) +\left($

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

or the existence of other bodies — may soon lead to tendencies in the $\,$

opposite direction, viz. a partial privatisation, unbundling and

stronger geographic, sectoral or functional focusing of the corporations.

None of these processes should be prevented or accelerated unduly. It $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1$

will probably take another two years for an efficient support structure to evolve in each region. In this process one or other $\ensuremath{\mathsf{C}}$

organisation - the provincial SMME desk, one of the evolving corporations or a broadly-based NGO - may crystallise out as the most

effective coordinating instrument for $\ensuremath{\mathsf{SMME}}$ support in the province.

5.7 Local authorities

5.7.1 All over the world there is increasing realisation that the most

 $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left($

or metropolitan area. Local authorities have direct "contact" with

each enterprise, down to those involved in survival activities, and

their administrative infrastructure could be useful for the implementation of support programmes.

5.7.2 In our past, local authorities have seldom played a significant supportive role with respect to SMMEs. More recently there is greater

understanding and tolerance in matters like informal markets, hives

and incubators, flexible zoning, business-infrastructure facilities,

etc. This trend is likely to increase rapidly, as the composition of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left(1\right) +\left(1\right) \left(1\right) \left($

elected local councils changes and new municipalities struggle to

increase local job creation and rates-generating business activities.

5.7.3 Once again, this White Paper cannot prescribe to local authorities how

they should structure their support for SMMEs. Many of the principles $% \left(1\right) =\left(1\right) +\left(1$

and programmes outlined here should be of direct relevance to local

governments. Besides, NGOs, organised business, LSCs (assisted by the $\,$

 $\ensuremath{\mathsf{CSIR}})$ and the development corporations are also important players at

the local level. The real challenge actually lies in the effective

orchestration of all the efforts of these bodies, together with the $\ensuremath{\mathsf{E}}$

programmes implemented via the SBDA and other national agencies, in a $\,$

way that local economic development is strengthened and small enterprises are supported.

Where local authorities - or other local institutions, like community

development corporations or business chambers — play a proactive, $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left($

facilitatory role in this co-ordination process, they can be of $\ensuremath{\mathsf{great}}$

help to the provincial desks as well as the SBDA (which will most $% \left(1\right) =\left(1\right) +\left(1\right) +$

probably establish a section or unit for local SMME-support programmes). Where no such inclination exists, the provincial desks.

the SBDA and other local, regional or national agencies may have to $% \left(1\right) =\left(1\right) +\left(1\right)$

play a more proactive role in those local areas, at least until attitudes change.

5.8 Local Service Centres

One of the most important instruments to spread support for small enterprises at local level is the envisaged nation-wide network of Local

Service Centres (or, more appropriately, called Business Service Centres).

Following on the strong positive response to this proposal in the $\operatorname{Discussion}$

Paper, a task team coordinated by the CSIR, which also includes foreign

experts in this field, currently investigates the preconditions for the

evolution of such a nation-wide network. Based on the already existing

range of information or service centres established and run by a diversity

of organisations, the strategy aims at its expansion towards a fairly dense

national grid. The team will also prepare proposals for a support programme $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right)$

for LSCs and the structuring of a monitoring and co-ordination body to lead $\,$

the whole initiative. The following points summarise the essence of the $% \left(1\right) =\left(1\right)$

envisaged approach.

5.8.1 The LSC network should enable the government's small enterprise support, and that of other support agencies, to reach all corners of

our country.

5.8.2 The LSCs should have as lowest common denominator the provision of

information and advice services to small enterprises in their vicinity. To achieve operational efficiency and maintain acceptable

standards of service, Local Service Centres have to be accredited with

the SBDA (or an appointed agency) in order to be eligible for government support.

5.8.3 In addition to the common services of business-information centres.

 ${\tt LSCs}$ - which can be set up by any type of SMME-support agency or

through any local initiative — can each expand their services to

include (i.a.) training, mentoring, business plan preparation,
 marketing and subcontracting support (e.g. the Business
Opportunity

Centres), etc.

5.8.4 Each LSC has to have its own control structure, with accreditation

likely to demand proof of accountability and transparency.

5.8.5 The government will not be responsible for the funding and/or management of local service centres. It may, however, on the basis of

criteria and guidelines still to be worked out, financially support

some of the activities undertaken by certain of the centres. Such

support will be conditional to the centres meeting specific conditions $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

and remaining registered with the SBDA.

 $5.8.6\ \mathrm{In}$ order to make available support services of good quality, the LSCs

will be encouraged to enter franchise-type relationships with the $% \left(1\right) =\left(1\right) +\left(1\right) +$

suppliers of information, advice, training and other services.

The

government (via the SBDA) may consider to financially assist these

franchises with respect to programmes directly relevant for formerly $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2$

disempowered entrepreneurs or LSCs in low-income urban or rural communities.

5.8.7 As far as practically possible, LSCs should encourage groups of small

enterprises to strengthen their co-operation within particular sectors, industry niches or geographic regions. Training and mentoring efforts to strengthen such group action may also qualify for

some support.

5.8.8 As soon as the LSC concept has been detailed and accepted, multi-year

targets will be set. Ideally, LSCs should be located within easy

access to SMMEs in every province and district. LSCs should also be

able to link clients to other centres or information facilities in the $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

country, using computerised exchange networks.

5.8.9 Compared to all the other policy areas forming part of the national

strategy, the establishment, maintenance and gradual expansion of a $% \left(1\right) =\left(1\right) +\left(1\right)$

 $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

small business support in the near future and it is likely to demand \boldsymbol{a}

substantial share of public sector funding for the small

field. It should, in fact, be the one programme that can best help to

integrate services available for small enterprises at the local level.

5.9 NGOs and small-business support

Many NGOs are actively involved in small business support, with their funding coming from local or foreign sponsors. While it is not foreseen

that these NGOs will in future be fully funded by either the DTI or other $\,$

government departments, they should be eligible for programme funding with

respect to areas of their expertise. In addition, NGOs could function as $\ensuremath{\mathsf{S}}$

LSCs, with some of their activities directly assisted by government. Those

wanting to be eligible for support will have to be accredited with the SBDA.

5.10 Organised business

Reference has been made earlier to the important role chambers of business $% \left(1\right) =\left(1\right) +\left(1\right)$

and sector or industry associations play in the support of SMMEs. This

trend is likely to increase further, in line with trends towards more inclusive membership structures. Business associations can also play

critical role in the planning and successful implementation of the ${\tt LSC}$

system. Where they directly supply services to their clients which are

related to state-assisted programmes, these associations — if accredited — $\,$

should also be eligible for support.

PART SIX

Action programme

We have so far outlined the different elements of the national SMME-support

strategy and the evolving institutional framework through which the strategy $\ensuremath{\mathsf{T}}$

should be implemented. We can now look at the process of strategy implementation based on a broad time framework.

6.1 An integrated view

In order to put the strategy process into an overall perspective, the Diagram on page 50 illustrates the link between the enabling environment and

the institutional support framework, the two aspects covered in Parts Four

and Five of this White Paper. Guided by the overall vision of growth and

development promotion (A) within the RDP, the hundreds of thousands of small $\,$

enterprises (B) operating in the economy so far dominated by big business,

multinationals and parastatals (C), should gradually face an improved business environment (D), due to the impact of the different support agencies (E).

While general support, like better access to finance, training, marketing,

etc. would benefit all SMMEs in the particular sphere, it is a central part $% \left(1\right) =\left(1\right) +\left(1\right)$

of the government's policy that, as far as practically feasible and financially possible, specific target areas should be supported on the basis

of tailor-made support packages. The target areas (F) have been mentioned

in section 3.5, and further references have been made in later sections.

The elements of these packages will depend on the particular needs and

problems of the target groups as well as resources available. As a rule,

the package elements will consist of combinations of policies discussed in

Part Four (D).

It should be clear that all these policies, institutions and systems cannot

be developed overnight. Even with a vigorous approach by government, it

will take a few years to address all the aspects in the enabling environment

and to establish all the support agencies. A ten-year horizon will be needed to reach all the target groups through systematic programmes. By

then it should be possible to start phasing out some of the targeted programmes and to reallocate resources.

Given the diversity and complexity of issues, policies and support agencies,

it is not possible to spell out clearly how the government will go along to

implement this framework. After all, much will depend on the cooperation

of the private sector, NGOs and parastatals with their support action. Yet,

within a broad time framework the following action programme summarises the $\,$

government's commitment for the road ahead.

6.2 Short-term: Action since mid-1994

The activities listed below have started after the change-over in government

and they are likely to dominate the scene up to April 1995.

- Preparation of the Discussion Paper and analysis of grassroots feedback
- Initiation of institutional reform processes (e.g. SBDC)
- Preparation of the White Paper and confirmation by cabinet and parliament
- Interim Committee for the NSBC
- Preparations for the establishment of the SBDA
- Presidential Conference on Small Business with implementation proposals
- Establishment of Chief Directorate in the DTI
- Assessment of existing business-service facilities and planning of ${\tt LSC}$

strategy

- Start of re-orientation of state procurement toward small-enterprise $% \left(1\right) =\left(1\right) +\left(1\right) +\left($

suppliers

During this period no additional budget funds were available; most of

initiatives were funded via foreign support.

6.3 Short-term: Fiscal year 1995/96

The tentative budget is likely to cover R180 million including RDP allocations, supplemented by foreign donor funds. The following action is $\frac{1}{2}$

scheduled:

- Establishment of the NSBC within the Nedlac framework
- Establishment of the SBDA
- Establishment of the SMME Finance Trust
- Implementation of SBDC reforms negotiated early in 1995
- Preparation of legislative proposals (enabling acts)
- Negotiation with provinces about their role and resources in $\ensuremath{\mathsf{SMME}}$ support
- Preparation of the first SMME Annual Review (October 1995)
- Development of key support programmes (via the SBDA)
 - * Black advancement
 - * Local Service Centres (core grid)
 - * Expand the credit-guarantee scheme (positioned outside the SBDC)
 - * Export-support strategies
 - * Co-ordination and accreditation of training
- Focus on initial high-priority target areas (Phase I)
 - * Women entrepreneurs
 - * Youth self-employment
- $\ensuremath{^{\star}}$ Planned rural infrastructure development, also focusing on the needs of

SMMEs

6.4 Medium-term developments 1996/97 - 1997/98

These will be the first two budget years prepared after acceptance of

White Paper. This should enable a substantially higher budget allocation.

The following priorities seem logical.

- Develop a systematic funding framework for SMME support
 - * and communicate this to the SMME community and the NSBC
- Develop monitoring and evaluation systems for programme assistance
- Expand access to finance for micro-, survivalist and small enterprises
- Expand the LSC network grid
- Facilitate the development of further sector and target programmes (Phase

II)

- Strengthen the capacity-building process, in particular for
 - * provincial SMME support staff
 - * business and sector/industry associations
- Expand links with the SADC countries in SMME support areas
- 6.5 Medium-term developments 1998/99 1999/2000

At this stage the full spectrum of enabling policies should be in place and

all the support agencies should function. It is now a question of reaching

out to all parts of the country and strengthening existing programmes.

- Further expand financial resources for SMME support (especially joint

funding)

- Broaden core programmes (access to finance, etc.) to reach all parts of $% \left(1\right) =\left(1\right) \left(1\right) +\left(1\right) +\left(1\right) \left(1\right) +\left(1\right) +\left($

South Africa

- Systematically expand sector/target programmes (Phase III)
- Start shifting emphasis in SMME support from central/provincial to local

economic development

- Regularly monitor and adjust existing programmes
- Expand interaction with the SADC and other African countries as well as $% \left(1\right) =\left(1\right) +\left(1\right) =\left(1\right) +\left(1\right) +$

multilateral bodies

6.6 Longer-term action 2000 to 2005

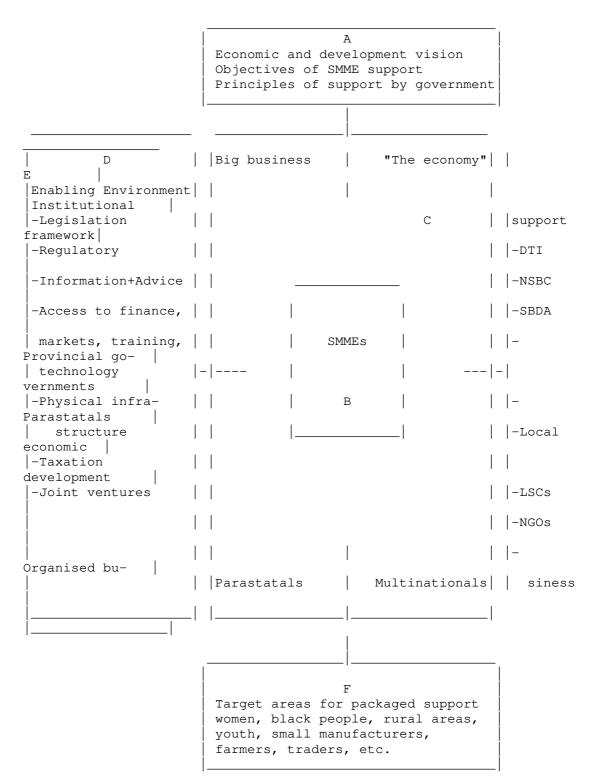

Much of the action will be determined by the progress made up to 2000, the $\,$

unfolding of targeted programmes and the provision of resources.

- Further expansion of target programmes (Phase IV)
- Beginning of the phasing-out of some programmes (sunset clause to become

effective))

- Ongoing streamlining of the institutional framework
Diagram: The national SMME-support strategy in perspective

- Further decentralisation of support to local/sector levels
- Shift of the balance of support from government to private sector
- Expand efforts to assist survivalist enterprises to move into micro-enterprises or outside employment

The further detailing of this preliminary action programme will take place

during the presidential conference at the end of March 1995. Systematic

reviews and policy previews will also be contained in the ${\tt Annual}$ ${\tt Small}$

Business Reviews to appear during spring of each year.

PART SEVEN

Funding the national strategy

7.1 The challenge

This White Paper presents a comprehensive strategy for SMME support, including a wide range of possible programmes. Its goal is to reach small

enterprises across the country, and to achieve a significant and lasting $% \left(1\right) =\left(1\right) +\left(1\right) +\left$

increase in the role of SMMEs in South Africa's growth and development.

Substantial financial resources will be needed to implement the proposed

strategy — undoubtedly much more than the resources made available in the

past, when SMME support reached only a small fraction of the small-business $% \left(1\right) =\left(1\right) +\left(1\right)$

community.

This need arises at a stage when fiscal discipline is critical for the

achievement of stable growth in South Africa, while strong competition

between the financial demands of different RDP sectors - like education,

health, housing, water supply, etc. - make it extremely difficult for government to respond to demands for disproportionately high increases in

allocations.

There is ample evidence that public-sector funding for $\ensuremath{\mathsf{SMME}}$ support has been

extremely low during the past decades. Direct spending via the Department

of Trade and Industries has seldom been higher than about R60 to 80 $_{\rm million}$

 $\ensuremath{\text{p.a.,}}$ whereas total government and parastatal allocations for SMMEs all over

the country (including the former homelands) may still have been less than

about R700 million, or 0,6 per cent of gross budget spending in 1993/94.

The situation was further aggravated by the fact that a relatively large

part of the loan funding for SMMEs benefited entrepreneurs who could easily

have been financed through normal commercial channels.

With DTI spending on SMME development in the 1995/96 fiscal year expected to

reach R180 million, a major upward shift will have occurred in the state's

commitment towards the sector. The increase reflects the combination of $\ensuremath{\mathsf{RDP}}$

allocations of R100 million and regular departmental funds of R80 million.

Leaving aside departmental expenses, funds to operate the NSBC and an operational grant for the new SBDA, a total of about R140 million is earmarked for support programmes related to (i.a.) information centres,

micro-finance and credit guarantees, targeted assistance programmes and $\ensuremath{\mathsf{C}}$

institutional capacity building.

In order to mobilise all the available resources and co-ordinate programmes

optimally, the department intends to closely monitor all the funding earmarked for small-enterprise support by different state departments. This

also includes close co-operation with the provincial governments. $\overline{\mathbf{z}}$

7.2 Funding sources

assistance, and is it expected that the central government has to somehow

find the necessary funds. In the different strategy sections of Part Five, $% \left(1\right) =\left(1\right) +\left(1\right)$

emphasis was already placed on the diversity of support programmes and an $\,$

equally wide spread of possible funders. In order to get this diversity and

its significance into perspective we briefly List the full range of funding

sources for SMME support programmes and support action. To stress the fact $% \left(1\right) =\left(1\right) +\left(1\right)$

that central government budget funding is only one of the sources, this

category is shown last on the List and self-help programmes first.

7.2.1 Self-help activities by groups of small businesses, operating

operative or in loose associations (e.g. to facilitate marketing or $% \left(0\right) =\left(1\right) +\left(1\right)$

experience exchange).

7.2.2 Community self-help programmes to facilitate self-employment or the

start-up of enterprises (e.g. youth schemes in rural villages

urban neighbourhoods).

- 7.2.3 Private-sector-funded (profit-orientated) services to SMMEs, e.g.
 - credit through commercial banks or specialised institutions
 - joint ventures, franchises, partnerships
 - corporate social responsibility programmes
 - business link-ups (subcontracting from bigger businesses)
 - consultancies for SMMEs, including voluntary mentoring
- $7.2.4\ \mathrm{NGO}$ involvement in support programmes, funded from own revolving funds

or grants from other aid agencies

- e.g. mini-loan schemes, training schemes, marketing support,
- 7.2.5 Services provided by business associations to SMMEs, either fully

costed or subsidised from own funds (cross-subsidisation) or external $\ensuremath{\mathsf{c}}$

support

- e.g. the South African Chamber of Commerce (Sacob), the National $\ \ \,$

African Federation of Chambers of Commerce (Nafcoc), etc.

7.2.6 Local-authority services to or support for SMMEs, provided at cost,

 $% \left(1\right) =\left(1\right) \left(1\right)$ via rates and taxes, or in a subsidised form (cross-subsidisation or

funded from external subsidies)

- e.g. hawker stands, municipal hives, open markets, information centres. The funding could also be pooled between several local authorities or subregions.
- 7.2.7 Parastatal or statutory bodies involved in SMME support (fully or ad

hoc)

- use of own revolving funds/capital, e.g. the SBDC and regional development corporations
- $\ -$ functionally specialised associations offering services at cost or

on a subsidised base (with funding from external sources or $\ensuremath{\mathsf{cross}}\xspace-$

subsidisation) e.g. Safto (export support), universities (training

for SMMEs), CSIR

- 7.2.8 Wholesale funding agencies for SMME loans or other programmes
 - concessionary loan finance (DBSA, IDC)
 - grant funds (IDT, Kagiso Trust)

These agencies can tap government funds as well as capital- \max

sources and foreign donor funds.

- 7.2.9 Provincial governments, funded from regional sources, loans or central-government transfers
 - staffing of provincial SMME desks
 - support for provincial/local development corporations
 - provincial SMME-support programmes
 - 7.2.10 Foreign technical or financial assistance (grant or loan)
 - government-to-government programmes or multilateral aid
 - funding or assistance to other implementation agencies
 - regional joint programmes (SADC)
- 7.2.11 Central government funding of SMME-support programmes DTI operating

cost of Chief Directorate

- NSBC operating cost
- SBDA operating cost
 - * Local Service Centre support
 - * Finance Trust and Export support
 - * Other programmes handled via SBDA
- Direct or indirect funding of provincial support
- Tax incentives
- Other incentives (e.g. RIDP, Department of Labour, GEIS/EMA)
- Special RDP funds
- 7.3 Leveraging programme funding

All over the world the shortage of public-sector funds to meet all the

programme needs has led to innovative ways of leveraging available resources, i.e. mobilising other financial resources through the prudent

use of state funds. Matching grants are the best-known examples. In that

case state funds only become available if the implementing agency mobilises

other financial sources. This could be direct contributions from the client

entrepreneurs, cost-sharing contributions from other partners in the programme (e.g. big business in subcontracting support schemes) or joint

sponsorship from other agencies. The range of combinations is virtually

unlimited.

Aside from multiplying the resource input, matching grants and similar $\ensuremath{\mathsf{cost-}}$

sharing schemes have the advantage that they exert additional discipline on $\ \ \,$

the programme managers; if others also have to contribute, state funds may

be less easily misused.

7.4 Meeting the challenge

The funding of support programmes in an economically responsible way constitutes the biggest challenge of the whole national strategy. Throughout the White Paper emphasis has been placed on ways to reduce the

cost of support programmes or to spread it over a wider range of support $% \left\{ 1\right\} =\left\{ 1\right\} =\left$

agencies. Similarly, the benefits of support programmes have to be disseminated as widely as possible, in order to reach SMMEs in all the

corners of the country. What is more, wherever feasible small enterprises

should themselves contribute to the cost of support services. In this way

the funding capacity should increase as the geographic coverage and comprehensiveness of the support programme expands.

It is not possible at this stage to put this process into specific quantitative terms, which also include expected claims on the fiscus. Yet,

to conclude this section a few fundamental principles are put forward, which

- if adhered to - could help us to meet the financing challenge. Funds have to be mobilised from the widest possible range of sources, including local public and private sources as well as foreign assistance.

In order to achieve the type of breakthrough envisaged in this White Paper,

allocations for SMME support in the central government's budget should

increase to at least about one per cent of total budget spending for the

next decade.

SMME support has to be closely integrated with all other development support

programmes of the RDP.

- \mbox{All} the programmes have to be based on strict financial discipline and

have to be structured in a way that self-help and own financial contributions by entrepreneurs are encouraged and gradually increased.

 $\mbox{-}$ All targeted assistance should include sunset clauses and safeguards

against built-in cost escalation.

It is these challenges that constitute the basis of the task ahead for the

implementation of the national strategy.
