

Project management

Michael Sars Norum Ola Haavik Lecture in "TDT4290 - Kundestyrt prosjekt", IDI, NTNU 03.9.2009

Agenda

• Who is BearingPoint

- How do we get projects ?
- How to organize a project ?
- How to plan a project ?
- How to follow up a project ?
- Project Definition Plan / Project handbook
- Project management tips & tricks

BearingPoint is one of the Europe's leading consulting firms

BearingPoint. Management &Technology Consultants

- BearingPoint has more than 3 250 employees in 14 countries.
- In the Nordics we are 250 employees, including 60 in Oslo.

Some of our clients

The technology part of BearingPoint is called Information Management and work mostly with Business Intelligence BearingPoint. Management &Technology Consultants

Konsulentskolen er et tilbud til studenter på nest siste året

VIL DU....

- Lære grunnleggende problemløsnings-, fasiliterings- og presentasjonsteknikker som er nyttige i både studie- og jobbsammenheng
- Knytte kontakt med erfarne BearingPoint konsulenter
- Bli kjent med dyktige studenter fra BI, NHH og NTNU
- Delta på sosiale aktiviteter

- BearingPoint inviterer nest sisteårs- studenter til å delta på KONSULENTSKOLEN – en unik mulighet til å få innblikk i en konsulents spennende og utfordrende hverdag
- Hoveddelen av kurset består av to samlinger i Oslo
- Søknadsfrist for konsulentskolen 2009/2010 er 1.oktober 2009

Agenda

- Who is BearingPoint
- How do we get projects ?
- How to organize a project ?
- How to plan a project ?
- How to follow up a project ?
- Project Definition Plan / Project handbook
- Project management tips & tricks

BearingPoint. Management & Technology Consultants

- 1. The Client knows us or have heard about us, and contacts us directly with a problem or a project opportunity
- 2. We know about the Client and do see that he or she does have a challenge/problem, and then contact the Client directly with a project suggestion or proposal
- 3. Open tenders

How does an open tender usually works?

1. RFI (Request for Information)

 Either sent to selected companies or publicly announced (mandatory for public sector)

2. Pre-qualifications

Shortlist of the most interesting candidates

3. RFP (Request for Proposal)

 Usually a detailed requirement specification sent to the candidates on the short list.

4. Evaluation and Negotiations

Usually 1–3 candidates are taken to negotiations

5. Signed Contract

Finally ready to start working on the project

BearingPoint

Agenda

- Who is BearingPoint
- How do we get projects ?
- How to organize a project ?
- How to plan a project ?
- How to follow up a project ?
- Project Definition Plan / Project handbook
- Project management tips & tricks

The chance for success for a project increases with a well defined project mandate, clear objectives and a structured set of roles in the organization

BearingPoint

A project's success is judged by how well the objectives are achieved within the boundaries of its mandate

Project mandate (= mission)

 The mandate is the purpose of a project combined with what authority the project is given within which borders

Project objectives (= goals)

- Result objectives a set objectives that this project should meet to be successful
- Effect objectives a set of long term consequences this project must enable to be successful

BearingPoint

Consultants

Overview of a normal project organization in larger implementation projects

Management &Technology Consultants

BearingPoint

Development project (SI)

Receiving client project ("Mottaksprosjekt") All projects should be organized with a steering committee and project manager from the client and a project manager from the System Integrator (SI)

(System Integrator is used here as a term for the consultant firm that deliver the consulting services)

The Steering Committee

Description

The Steering Committee is overall responsible for the project.

BearingPoint

- Tasks and responsibilities
 - Manage goals, scope and realization of the business case
 - Approve schedule, deliveries and change orders within the project
 - Ensure that the project receives enough internal resources
- Participants:
 - The Steering committee consists of decision makers from the client
 - The engagement managing director from SI participates in the Steering committee without the right to vote
 - The project managers from the client and service provider reports to and participates in the Steering committee

Reference Group

Description

 The Reference Group is not responsible for any deliverables but is used

BearingPoint

- partly to make sure that the project is rooted in different part of the organization and
- partly to check out and verify different solutions
- Participants:
 - Key personnel form different divisions/departments within the client organization

The clients project manager

Description

 The project manager from the client is responsible for the daily management of the project

BearingPoint

- Tasks and responsibilities
 - Daily responsibility for the project as a whole
 - Responsible to coordinate receiving activities at the client with the development project
 - Responsible for reports the Steering Committee (reports will be done in collaboration with project manager from SI)
 - Responsible for organizing, mobilize and implementation of the receiving client project
 - Responsible for the client's achievement, tasks and resources within the project
 - Follow-up risk

The project manager from the systems integrator

Description

 The project manger from the systems integrator has the daily responsibility for the development project and project resources

BearingPoint

- Tasks and responsibilities
 - Daily responsibility for organization, mobilizing and accomplishment of the development project
 - Responsible for achievement, tasks and project resources
 - Responsible for the collaboration together with Project Manager from the client
 - Preparation responsible of status reports from the development project
 - Prepare detailed,
 - Time and project plan
 - Project scope
 - Responsibility of project resources
 - Administrative routines
 - Follow-up risk
 - Quality assurance on deliveries

Key roles in a development project

Description

 In an development project, there are often a lot of project members with roles related to functionality, technology or test.

BearingPoint

- The key roles in these three areas are:
 - Functional Architect
 - Technical Architect
 - Test manager
 - Developer

Key roles in a the receiving project

Description

 The receiving project is the team at the client with roles related to functionality, environments, organization or test.

BearingPoint

- The key roles in these four areas are:
 - Functional expert
 - Test manager (acceptance test)
 - Technical roll out manager
 - Change manager

A Skill matrix is a tool for assessing the skills requirements and where there are competency gaps that need to be filled within the project team

In BearingPoint we always focus on Values and ground rules in setup of our projects

BearingPoint. Management &Technology Consultants

Commitment to Client's Success

Commitment to Each Other's Success

Leaders Who Serve

Teamwork & Collaboration

Integrity in our actions

Speed With Purpose

Stewardship

One Firm

Goal of values section

- Refresh our values and guiding principles
- Define ground rules for the project

The values process

- For each value: examine what the project has to focus on in order to live up to this value
- 2. Document the result
- 3. Follow up actions and ground rules!

Agenda

- Who is BearingPoint
- How do we get projects ?
- How to organize a project ?
- How to plan a project ?
- How to follow up a project ?
- Project Definition Plan / Project handbook
- Project management tips & tricks

"Plans are nothing; planning is everything." Dwight D. Eisenhower

Sometimes a plan is something!

BearingPoint. Management & Technology Consultants

Planning is all about breaking the project into manageable pieces

BearingPoint. Management &Technology Consultants

Start project planning by creating a work breakdown structure (WBS)

Management &Technology Consultants

BearingPoint

Work Breakdown Structure

- Focused on <u>end-deliverables</u>
- Hierarchical structure which sub-divides all the work elements
- The lowest level of work element is called a task package
- Not necessarily a right or wrong structure

The work breakdown structure should give input to the project plan

- A WBS defines WHAT solutions to develop
- A project plan defines HOW to develop the solutions
- There is normally a one-to-many relationship between task package and activity

Task Name	Budget	EAC	Resource	1	1997 Fob	Mare	l Anr	1997 Mari

- Your new business idea is to sell school books over the Internet
- How does your WBS (work breakdown structure) look like?

Documenting the plan

- Once the planning is complete the plan needs to be documented
- There are several ways to document the plan, many which will be overkill for most situations
- A simple tool like Excel will usually work quite well for most projects
- If planning a very large project or a project with strict requirements regarding tracability to performance and change a more advanced tool can be utilized

BearingPoint

The project plan results in an baseline for progress in the project often called the S-curve

BearingPoint

Management &Technology

Consultants

Planning for iterations is not very different, in fact it can make the task of planning and preparing easier

Planning for iterations

- Creating a detailed plan for the entire project upfront can be hard and near impossible if the deliverables are unknown
- Planning for iterations divides the project into smaller packages that can be planned in detail as the project progresses
- However, using an iterative approach does not exclude the need for an initial analysis of the domain and work to be performed and the creation of a masterplan, work has to be divided between different iterations and the iterations need to be placed on a timeline
- The first work to be performed in each iteration will be to create a detailed plan for the work to be performed

Agenda

- Who is BearingPoint
- How do we get projects ?
- How to organize a project ?
- How to plan a project ?
- How to follow up a project ?
- Project Definition Plan / Project handbook
- Project management tips & tricks

What do you need to know to follow up a project?

As a project manager you need in-depth knowledge of your project's:

- Progress according to plan
- Last period's activities
- Next period's planned activities
- Important unsolved issues
- Risk issues
- Resource issues
- Scoping issues
- Business Case

Knowledge of these areas is needed in order to successfully manage the project and report to project stakeholders such as project sponsor, steering committee and others.

BearingPoint

The three questions of the daily SCRUM:

BearingPoint

- What did I do yesterday?
- What will I do today?
- Is there anything that can or will obstruct my work today?

All risk elements should identified and tracked on a weekly basis. Each risk element should be assigned a probability, consequence, action and responsible person

#	Description	Risk
1	Not access to key personnel	1x8=8
2	Non-key resources tied up on other project	2x3=6
3	Low management support in client organization	4x7=28
4	Wrong architecture decisions due to unclear requirements from the client	8x8=64
5	Slow response from the clients verification team	5x2=10
6	Complex integration to back systems delays the project	3x5=15
7	Fail to fulfill end-users expectations	6x9=54

Progress control is all about ensuring that you are on time and within budget

BearingPoint. Management & Technology Consultants

What are the benefits and disadvantages of "no tracking"? When can we use it?

- Absolutely no chance of knowing the exact status ("we're almost 90% done")
- WILL result in budget overruns
- MAY very well result in a delay
- Normally works OK for very small projects (1–2 people, 2–3 weeks)

The second level of tracking a project is by tracking milestones

- Works OK for medium sized projects (2–3 people, 2–3 months)
- Useful method for project with vague or undefined outcome (e.g. strategy or restructuring projects)
- Time Between Milestones (TBM) should be less than 3–4 weeks
- Status report should include:
 - Activity/milestone
 - Original deadline for milestone
 - Status (either "According to schedule", "Met" or a new revised date)
 - Changes since last status (i.e. "are we getting even more delayed than at the last status?")

The third level of tracking a project is Earned Value Analysis (EVA)

No tracking Progress Control Earned value analysis

Management

& Technology Consultants

BearingPoint

- The best technique for controlling the work
- Used for medium size projects and up to large programs consisting of multiple projects
- Is based on the calculation of some few key indicators which are compared to the project baseline
- Gives a simple, effective and lucid status

Earned Value Analysis (EVA) graph

Information available when planning

Budget = Original budget, usually fixed

Planned earned = Budget over time

Information reported by each project member

Actual Work = Actual time, i.e. number of hours used

Estimate To Complete (ETC) = Estimated time to complete task

Indicators that must be calculated

Estimate At Completion (EAC) = Actual + ETC (i.e. the estimated total cost) **Variance (VAR)** = Budget - EAC (i.e. budget variance)

Earned value = Budget - ETC (NB: earned is always against budget)

		Week 1	Wеек 2		
	Total budget	20	20		
Deperted	Planned earned	5	15 (20)		
Reported	Actual this week	15	10 (25)		
	ETC ?	10	5		
	EAC	15+10=25	25+5=30		
Indicators	VAR	20-25=-5	20-30=-10		
	Earned Value	20-10=10	20-5=15		

→ Don't mix up ETC with remaining Budget!

ETC = Estimate To Complete EAC = Estimate At Completion VAR = Variance

What characterizes this project?

Project Definition Plan / Project handbook

Project management tips & tricks

BearingPoint. Management &Technology Consultants

The PDP is composed in cooperation between the service provider and the project manager and will contain practical information on the project execution

Content of the PDP:

- Description of background and goal setting
- Mandate
- Organization
- Project plan
- Method/approach
- Routines and guidelines
- Quality assurance

When starting the project, make sure you:

- 1. Know which problem the client wants you to solve
- 2. Make the client knows which problem you are solving
- 3. Solve the right problem
- 4. Manage your client's expectations

Make sure you have a firm contract with agreed deliverables and capture it all in your PDP

Agenda

Phases in a team

Conflict management in a team

How to handle difficult people

Problem

Late without a reason

The quiet person

The unfocused talkative person

The stubborn/ negative person

How to handle

- Rules and consequences
- Don't update the person
- Let someone else update
- Ice breaker/laughs
- Ask about something well known
- Thank for input
- Time limits
- Ask for a short version
- Avoid eye-contact
- Recording-role?
- Questions
- "W.D.Y.P"?
- Refer to facts
- Use voting techniques
- Permit change without loosing face

The person who disturbs

How manage persons who disturb

How to handle difficult situations

CHANGES

OHAN DES

Situation

Question to agenda/process

- Last minute changes
- Meeting time
- Participants

Discussions not relevant for the workshop purpose

Questions you cannot answer

Participants question the workshop purpose

Role of consultants is questioned

How to handle

- Refer to preparation & purpose
- Rework agenda with the group
- Go/no-go?
- Discuss changes to agenda
- Decide potential follow-up
- Freeze frame resulting in
 Parking lot, or
 Reworked agenda
- Workshop setting ≠ present deliverables!
- Prepare for these questions with client
- "W.D.Y.P"?
- Seek support from client sponsor
- Who can find the answer?
- Prepare for with your colleague
- Find out the real question "Why do you ask?"
- Seek support from client sponsor
- Describe your view prevent argumentation
- Secure and communicate clear consultancy roles
- Find out background for question
- Follow-up with the individual
- Remember: Don't take it personally

Any questions?
