**PUTTING POWER  
IN THE RIGHT HANDS.**

*A few decades ago, a computer that could do what this tiny micro-chip can do today, occupied the space of a 2-car garage. It cost so much that only governments and huge businesses could use it.*

*Then, 25 years ago in Toronto, we formed a company that would put computer power in the hands of everyone.*

*Now there are Commodore PETS in most Canadian schools. There are nearly half a million Commodore VIC-20's in Canadian households.*

*And any serious student or corner businessman can easily afford a Commodore 64 with all the peripherals and software he or she needs. Because we deliver high performance at low price, we have put more computers into this world than any other company.*

*Quick thinking, mind expanding, vision making, dream seeking, power to the people.*

 **commodore**  
**COMPUTER**  
25th ANNIVERSARY

Over the last quarter-century, Commodore International's founder and president Jack Tramiel has led the company on a heady ride from retail typewriter repair shop to global giant in the micro-electronics industry.

Commodore has progressed to its present status as one of the top personal computer manufacturers in the world from typewriter repairs and sales in 1958 through adding machines, office furniture, electronic calculators and digital watches during the '60s and early '70s, then to personal computers beginning in 1977. The company's sales are now running over \$680 million (U.S.), which is a long way from the \$3.5 million attained in 1962, the first year Commodore was listed as a public company.

Much of Commodore's success can be attributed directly to Jack Tramiel, who has both the knack for anticipating consumer needs and the hustle of a determined entrepreneur to turn his ideas into profits.

Commodore Business Machines Limited first set up shop early in 1958 at 2 Toronto Street in the city's downtown core. Later that year, having grown to a strength of five employees, the company moved to more spacious quarters on Davenport Road. Two more moves for expansion purposes brought the company to 501 Yonge Street, then 680 King Street West at Bathurst in 1959, where Commodore continued in sales and repair.

While operating from the King Street shop, Commodore advanced into the manufacture of typewriters with the acquisition of a factory in West Berlin, Germany.

Early in the 1960s, Tramiel began selling and servicing a wide range of office equipment, and distributing nationally for an office furniture company.

By 1962 the Commodore label on typewriters and adding machines had become a basic inventory essential in most major department stores and catalogue houses throughout Canada, and Commodore staff were retailing products in the United States at locations leased in leading department store chains. This year also marked Commodore's entry into the rapidly expanding field of office copying machines with the introduction of its Drycopy machine.

Ever innovative and entrepreneurial, Commodore in 1962 broadened its horizons even more by introducing a stair-climbing wheelchair. Entering the marketplace before many buildings were adapted to accommodate the handicapped, this product disappeared as wheelchair ramps became more common.

In its next year of operation Commodore took over a larger premises at 946 Warden Avenue in Scarborough. At this location the company continued distributing office machinery and furniture, and began distributing for Pearsound, makers of radio and stereo equipment. Today, 20 years later, this Warden Avenue building is still a Commodore distribution centre, and also its manufacturing site for the C-64 and VIC-20 in Canada.

In 1965 Commodore acquired the furniture manufacturer for whom it was distributing, and moved its operation to what is now Commodore's present Canadian headquarters on Pharmacy Avenue. Commodore still manufactures office furniture (mainly filing cabinets and desks, plus metal housings for the CBM 8032 and SuperPET) at this plant in Scarborough.

Also in 1965, Commodore sold its adding machine plant and instead found a company in Japan to make adding machines for Commodore

# THE COMMODORE QUARTER-CENTURY

*Top of Commodore's 1968 line of typewriters, Model 2200 offered the "best portable typewriter value, dollar for dollar" of machines in its class, according to its advertising. (Top)*

*Commodore Model 202 adding machine, 1968 vintage, was very modern and efficient, including some automatic functions.*

*The popular Commodore 64, shown here with a Commodore colour monitor, has many applications for home, educational and small business users.*

*Commodore's new "B" Series business microcomputer, available also with an integral display monitor, has a minimum RAM configuration of 128K, expandable to 896K and has numerous business applications. (Bottom).*

to distribute. While in Japan, Tramiel got his first look at an electronic calculator, and he quickly deduced that this product would mean the death of the mechanical adding machine. With the Commodore philosophy that "if we are not our own competition, then someone else will be", Tramiel moved quickly and found manufacturers to produce electronic calculators under the Commodore name. Thus, the company was right there in the market when it began to take off.

Commodore began manufacturing its own electronic calculators in 1969 using Texas Instruments chips. In fact, Commodore was the first company to bring out a "hand-held" calculator - the C108 - an example of what has become a long history of Commodore "industry firsts" in marketing value, innovation and performance in new products.

The market for this type of product is easy to see by looking at a breakdown of Commodore sales in 1969. Figuring machines accounted for 81% of sales, while furniture made up 11% and typewriters dropped to only 8% of company sales.

Up to 1974 Commodore expanded its line of calculators from simple four-function machines to memory machines, scientific machines and keyboard programmable models. Commodore was largely dependent on third parties for the chips and displays that went into the products it was making.

In 1975, Texas Instruments decided to begin manufacturing calculators. At the same time, chip prices dropped to \$1 from \$12, and Commodore was caught with a big inventory of chips and calculators while market prices plunged. It was this incident which led to Tramiel's decision that Commodore would be a company that controlled its own destiny, and not be at the mercy of other manufacturers.

Commodore purchased MOS Technology, one of its semiconductor chip suppliers, in 1976, and worked its way to become vertically integrated. This vertical integration allows Commodore to supply its own needs, and it gives the company significant lead time in new product development which means manufacturing cost advantages - and that translates into price / performance benefits for consumers.

The acquisition of MOS Technology was followed in the next 18 months by two further key acquisitions: a chip manufacturer and a manufacturer of liquid crystal displays. As a result of these investments, Commodore had in-house expertise and production in more key technologies than most electronics companies several times its size.

Also in 1976, Commodore reorganized its corporate structure as Commodore International Ltd. and moved its financial headquarters to The Bahamas. The operations headquarters are now located in West Chester, Pa.

The next year was the watershed for Commodore when in 1977 - still anticipating the future in true Commodore style - the company introduced its first personal computer: the PET. It was this original machine, launched at the Hanover Fair in Germany and the Consumer Electronics Show in the U.S., that helped give birth to the personal computer market of today.

The PET sparked another period of rapid growth which is still underway today. It was marketed world-wide and really took hold in the European market because of the widespread, loyal dealer network Commodore had developed in its distribution of calculators. Commodore dominates the personal computer market in Europe today with

more than 50 percent of the market in many countries. In fiscal 1983 (year ended June 30) European sales reached more than US\$155 million, almost 23 percent of Commodore's total sales.

After the PET line was completed with the 4000 and later the CBM 8000 series micros, the next major product from Commodore was the very popular VIC-20. The prototype of the VIC-20 was previewed at the National Computer Convention in Chicago in 1980, and it was first launched in the Seibu Department Store in Tokyo, Japan because, as Jack Tramiel said about the threat of competition from Japan, "the Japanese are coming, therefore we must become the Japanese."

Commodore sold 800,000 VIC-20s world-wide in 1982, reached the 1 million mark early in 1983, and they are now being shipped at the rate of 100,000 units per month.

The company didn't stop with that success either, but continued research and development and in August, 1982 shipped the first Commodore 64. By March, 1983 The 64 was being shipped at the rate of 25,000 machines a month.

Commodore has become the largest unit seller of microcomputers in the world. And, according to a Dataquest study published in Electronic News recently, Commodore is No. 1 in computers priced under \$1,000 with an estimated 43% dollar volume share in the U.S.

As well as the obvious success the company has achieved in the home market, the Commodore name is familiar in both the business and education markets for personal computers with its SuperPET and CBM lines, and The 64 is also being used for a number of functions in small business.

In Canada, Commodore holds about 65 percent of the national market for computer in education (in Ontario it has captured 80%). Penetration is also significant in U.S., British and European schools and universities.

Commodore has become an international company, with manufacturing facilities in Japan, Hong Kong, West Germany, the U.K., Pennsylvania and California in the United States and Scarborough, Ont. In fiscal 1983 world-wide sales increased 44.7 percent over 1982's US\$304.5 million to reach over US\$680 million. By the end of fiscal 1984, Commodore will be a billion-dollar-plus company.

Wall Street financial analysts who follow Commodore (shares have been traded on the New York Stock Exchange for three years, and on the American Exchange several years prior to that) state that much of the company's success is due to its flexibility and willingness to adapt quickly to - and even lead - changes in technology and in the marketplace. Jack Tramiel puts it more simply: "The minute you're through changing, you're through." The company's track record of tradition and steady growth have resulted in an organization whose sophistication in research and development and in product engineering are second to none.

The commitment and dedication to research

and development - over \$37 million was invested in R & D last year - will lead to advances in technology and product application from Commodore in the years ahead. The company is driven by technology, and prides itself not only on giving its customers the products they want, but on introducing products the public didn't even know were available.

Commodore has programmers, systems designers and engineers working full-time to develop improved microprocessors, more efficient manufacturing techniques, enhanced quality control procedures, improved product design and engineering and, perhaps most importantly, an accelerated software development program.

Commodore is further expanding its software development in the United States and Canada with both in-house and external programming teams. The results of this program will certainly be evident to users of Commodore computers late in 1983 and throughout 1984.

Commodore remains a firm believer in the adage that if you just stand and watch the world go by, it will. So, the company continues to advance with a planned series of new proprietary systems, including a family of advanced microprocessors and peripheral integrated circuits for high-speed, low-power battery-operated computer systems, and improved video graphics.

In addition, investigation into advanced microprocessor architecture is well underway that could lead to even lower-cost 16-bit Commodore computers.

The most recent results of Commodore's high-level quality and value approach are the advanced "B" series business microcomputer and the portable Executive 64. The "B" series has a minimum RAM configuration of 128K, expandable to 896K. It is ideal for variable work situations, especially where high output levels are demanded. The Exec 64, weighing only 27.6 pounds, can go anywhere with no difficulty. It has 64K RAM, a built-in five-inch monitor and floppy disk drive with 170K capacity.

Another recent step has been the development of a sophisticated new voice synthesizer for the Commodore 64. The Commodore speech module plugs directly into the Commodore 64, and at present has a vocabulary of 235 words. This is the first voice I/O product to be developed at the company's speech Technology Division in Dallas, Texas.

Commodore is celebrating its 25th year with an international extravaganza being held in Toronto, Canada early in December. The "World of Commodore" Show is the first truly international computer show to be orchestrated by a single microcomputer company.

It's not the first "first" from Commodore, and it certainly won't be the last. Tramiel sees success as stemming from sales to the masses, not the classes, and to do that products have to be high on quality and innovation while being low on cost. Commodore has achieved this goal in the past, and intends to make sure it happens again and again in the future.

**ADVANTAGE Computer Accessories**

1020 Meverside Dr., Units 7 & 8, Mississauga, Ontario L5T 1J4 (416) 676-1200

Jeff and Marilyn Mitchell "designed" their new program themselves. CodeWriter wrote all the computer code. The Mitchells' dream is thriving on fulfilling other people's wishes. Their new home business needs very special information fast: Which fantasies are still open?

What's our next completion date? Can we get a list of all fantasies needing out of state travel?

They got it all—with no computer hassle.

And you can too, with CodeWriter. No programming. No. 'computerese'. At home or at the office, you create your own programs to handle any information you want—at your fingertips; Payables, receivables, inventory, credit cards, tax details, club or church records—always organized your way.

You work with CodeWriter in plain English. Simply 'draw' any screen layout, add any calculations you'd like done—or help messages you need—and you're done. CodeWriter writes all the BASIC code.

**"This is our first business, our first computer, and our first program—and we really did it ourselves!"**

In minutes you've got YOUR OWN PROGRAM on YOUR OWN DISK. You don't need CodeWriter again until you want a new program.

You can begin with **Home FileWriter™** and expand to more complete business systems with full report and menu design features.

You can get CodeWriter for the Commodore 64®, Atari®, Apple®, IBM PC®, Commodore Business Machine®, Victor 9000®, and Kay Pro II®, computers. Prices range from \$69 to \$249.

You think this much power can't come this easy? There are thousands of CodeWriter systems in use all over the world—80% are first time computer owners. CodeWriter writes solutions the first time you try!

## SPEED UP ANY BASIC PROGRAM WITH OUR COMPILERS

Up to 40 times speed increase, reduced program size.

### BASIC COMPILERS

**Petspeed Compiler** for 4000/8000 series \_\_\_\_\_ £125.00

**Integer Basic Compiler** for 3000/4000/8000 series £75.00

### CROSS-COMPILERS FOR BASIC

**Portspeed:** Compiles source on 8000 series to run on CBM 64 \_\_\_\_\_ £125.00

**X-64:** Integer compiler compiling on 8000 series giving machine code executable on CBM 64 \_\_\_\_\_ £125.00

**B-Port:** Compiles source on 8000 series to run on 700/B-128 series \_\_\_\_\_ £450.00

**X-700:** Integer compiler compiling on 8000 series giving machine code executable on 700/B-128 \_\_\_\_\_ £450.00

## GIVE YOUR VIC OR 64 FULL IEEE AND RS232

Not a cartridge. Compatible with any software.

**Interpod:** Free-standing interface giving IEEE488 and RS232C capabilities to CBM64/VIC20 \_\_\_\_\_ £99.95

### SPECIAL OFFER

Order 5 or more Interpod before 5th November 1983 and get a free Portspeed!

All prices are exclusive of VAT. There is also a small charge for post and packing. Dealer discounts are available on all products except the 700 cross-compilers.

Compilers are supplied ex-stock; Interpod supplied 7-days ex-stock.

### COMMODORE SOFTWARE

Native compilers for the CBM 64 and the 700/B-128 are available only from Commodore.

# Tax Pack <sup>TM</sup>

I designed Taxpack so you could do something really practical with your VIC 20.

Peter Lambert, MBA  
Vice-President,  
Product Development  
Cosmopolitan Software

**Taxpack**  
Powerful income tax computing software specially designed for the VIC 20.

See us in  
Booth 323

Now you can use your VIC 20 to perform all the calculations on your Canadian T1 general tax form. *Taxpack* guides you easily through every aspect of the form with friendly prompts and a comprehensive instruction manual. This new software is available on cassette tape and will run on the standard 3.5k memory in your VIC 20 home computer.\* *Taxpack* lets you tackle your income tax form at your own pace. A convenient save-and-restore function lets you record and review historical results. Professional editing features assure easy and accurate data entry. *Taxpack* puts the power of tax modelling and planning for subsequent years in your hands, today.

### Many happy returns

Because you can calculate and preview more tax scenarios with *Taxpack* than you'd have the patience or the time to do manually, this software can help you save tax dollars. Custom-tailored to the

Canadian T1 general form, *Taxpack* will be updated every year to reflect changes in the government's income tax regulations. Innovative program design allows us to update *Taxpack* within days of the new T1's availability.

### Special introductory offer

Order early and get your *Taxpack* for only \$19.95! That's a ten dollar saving off our regular retail price of \$29.95. If you're giving *Taxpack* for Christmas, we'll send you a special gift card to put under the tree. To use your *Visa* or *Mastercard*, phone us toll free; or, send your cheque or money order with the handy mail-order form attached. We'll confirm your order by return mail. Your up-to-date *Taxpack* cassette and manual will be shipped within 15 days of the release of the 1983 T1 general form.

\*The cassette also includes an expanded version of *Taxpack* with enhanced display features, for the VIC 20's with 8k+ memory expansion.

To order with *Visa* or *Mastercard*  
call us toll-free:

**1-800-268-6364**  
(from B.C., call 112-800-268-6364)

### Satisfaction Guaranteed

We guarantee that you will find *Taxpack* an excellent software value. If you are not totally satisfied, drop us a note to say why, and return the product post paid to us within 10 days for a full refund of the purchase price.

### I Want Taxpack!

# THE COMMODORE COMMITMENT

Commodore was born here in Canada 25 years ago. And although Commodore is an international company today, they continue to make more jobs for Canadians. In the past quarter century, Commodore has come a long way. The year 1977 marked a watershed for Commodore, for this was when it produced its first microcomputer. Also that year Commodore introduced microcomputers into Ontario schools—the first company in Canada to do so.

During the 70's, Commodore expanded its operations worldwide and acquired its own chip-making facility. Thus, from concept through design, research and development,

production, technical support and software offerings Commodore is the most vertically integrated personal computer company in the business. Born in Canada 25 years ago and committed to producing state-of-the-art technology at affordable prices.

This is the world of Commodore.

These were the factors that made House of Computers and Questar select Commodore over 5 years ago and why we continue to market and support Commodore computers today and in the future.

Our commitment to support has made our firm a leader not only in the home and personal computer marketplace, but also in

the professional, business and educational fields. Like Commodore we are a long term company dedicated to customer satisfaction.

"This is the World of Commodore."

"This is our total commitment to you."

## OUR GUARANTEE

**When you buy your Commodore system from either of our 2 locations we not only give you the highest level of support, service, and selection, but also the best price. We will match or better any advertised price, by a Canadian authorized Commodore dealer on in-stock Commodore product.**

See us at booth number 218 & 219.
