**Note:** An approximation may be used instead of the quadratic formula when the concentration of  $\text{H}_3\text{O}^+$  produced is less than 5% of the original acid concentration (or the concentration of the acid is 1 000 times greater than the  $K_a$ ). The same approximation can also be used for weak bases. The formula of the carboxylic acids have been written so that the COOH group can be easily recognized. Either the common or IUPAC name is acceptable.
