## 1. Introduction

### 1.1. Outline

This document describes TANSO-FTS Level 1 products produced with GOSAT data processing system.

GOSAT data processing system uses TANSO-FTS Level 0 data and then applies geometric and radiometric correction to produce following Level 1 products:

- Level 1A product
- Level 1B product
- Level 1A calibration product
- Level 1B calibration product
- Level 1A Lunar calibration product
- Level 1B Lunar calibration product

TANSO-FTS Level 1 products are in HDF5 (Hierarchical Data Format Version 5). They are produced with HDF library 1.66.

### 1.2. Baseline Documents

Following documents give the baseline for the design of products:

(1) JMP2.0

- JMP2.0 Specification (Technical Information Document of Geographical Survey Institute: E · 1-No.281, in Japanese)
- JMP2.0 Explanation (Technical Information Document of Geographical Survey Institute: E · 1-No.282)

(2) HDF5

- HDF5 Reference Manual (Release 1.6.6)
- HDF5 User's Guide (Release 1.6.6)

(3) Engineering Specification Document (ESPC)

- ESPC for global earth observation data processing system (for GOSAT), in Japanese (JX-ESPC-100149C)
- GOSAT TANSO ATBD(I) (SAT-060021)
- Algorithm design description for TANSO Level 1 Processing (draft), in Japanese (GOSAT-TANSO 処理-004\_4)
- Definition of JAXA GOSAT Products, in Japanese (NEB-0760004)

(4) CCSDS 133.0-B-1: Space Packet Protocol

## 2. Overview of products

### 2.1. Definition of processing level

Level 1A: Raw interferogram data obtained TANSO/FTS are reformatted and geometrical information are appended to produce level 1A products.

Level 1B: Non-linear correction, phase correction, and complex Fourier transformation are applied to sensor interferogram to produce level 1B products.

Table 2-1 gives definitions of TANSO-FTS processing level. (NB: Items for Level 1B processing may be subject to revise.)

**Table 2-1 Definition of TANSO-FTS Level 1 Products**

Type	Definition	Sensor Operation Mode	Appended information
Level1A	<p>Raw interferogram data obtained TANSO/FTS are reformatted and geometrical information are appended to produce level 1A products.</p> <p>One product contains followings:</p> <ul style="list-style-type: none"> <li>• Observation mode product: 1/60 data of one satellite revolution in time</li> <li>• Targeting mode product: One continuous set of target mode data</li> </ul>	<ul style="list-style-type: none"> <li>• Observation Mode (day/night)</li> <li>• Observation Mode II</li> <li>• Target Mode (Target Mode/Sunglint)</li> </ul>	<ul style="list-style-type: none"> <li>• Engineering value conversion parameters</li> <li>• Geolocation of observed point</li> <li>• Direction of Sun and Moon</li> <li>• Land/Sea flag</li> <li>• Quality Assurance Information</li> <li>• Ancillary data in Level 0</li> <li>• Ephemeris and attitude information</li> <li>• Calibration data information (Information of the closest calibration data before the observation time is given. If the closest past calibration data is not insufficient, the information of the closest calibration data after the observation time is given. Both these calibration data are insufficient, the next closest past calibration data information is given.)</li> <li>• Information on the range of wave number or optical path difference used for phase correction</li> <li>• Quality flag (Saturation flag at ZPD and flga for amplitude in lower frequencies)</li> <li>• Coefficients for non-liner correction</li> <li>• Method of Fourier transformation</li> </ul>

**Table 2-1 Definition of TANSO-FTS Level 1 Products**

Type	Definition	Sensor Operation Mode	Appended information
Level 1A Calibration	Raw interferogram data obtained TANSO/FTS are reformatted and geometrical information are appended to produce level 1A products. Type	Definition	Sensor Operation Mode	Appended information
Level 1B Lunar Calibration	Non-linear correction, phase correction, and complex Fourier transformation are applied to sensor interferogram to produce spectra accompanied with information of calibration earth surface albedo value (for bands 1-3) and spectral radiance (for band 4), same as L1B product One product contains followings: One continuous set of lunar calibration mode data	Lunar calibration mode	<ul style="list-style-type: none"> <li>• Engineering value conversion parameters</li> <li>• Direction of Sun and Moon</li> <li>• Quality Assurance Information</li> <li>• Ancillary data in Level 0</li> <li>• Ephemeris and attitude information</li> <li>• Phase correction information</li> <li>• Information on the range of wave number or optical path difference used for phase correction</li> <li>• Quality flag (Saturation flag at ZPD and flga for amplitude in lower frequencies)</li> <li>• Fringe count position of spike noise correction(s)</li> <li>• Coefficients for non-linear correction</li> <li>• Wave number of brightness spectrum (min, max, bin number)</li> <li>• Method of Fourier transformation</li> </ul>

## 2.2. Unit of products

Level 1A/1B products contain data defined by a baseline document (“Definition of JAXA GOSAT Products”). Detailed contents are described below.

- ① For observation mode (day/night) one product contains one scene data which is defined as 1/60 data of one satellite revolution in time.
- ② If mode change (observation mode (day), observation mode (night), target mode, calibration modes) happens in one scene, the scene is divided to sub-scenes at the mode change point. But, in case there are 2 or more sub-scenes with identical observation mode are combined.
- ③ One target mode product is a set of continuous target mode observation including target observation and sunlint observation.
- ④ All FTS bands data for the same exposure are stored in the same product.
- ⑤ The same exposure data in different bands never divided to separate products.
- ⑥ Calibration product contains all calibration data except for lunar calibration in one downlink (one Level 0 dataset) all calibration data except for lunar calibration in one downlink (one L0 dataset)
- ⑦ Lunar calibration data contains one continuous set of lunar calibration mode data
- ⑧ No overlap data between two continuous products.
- ⑨ One interferogram never divided to two or more products. If scene division timing appears in one exposure, this exposure data is included in the former scene.

Product example following above rules are shown below.

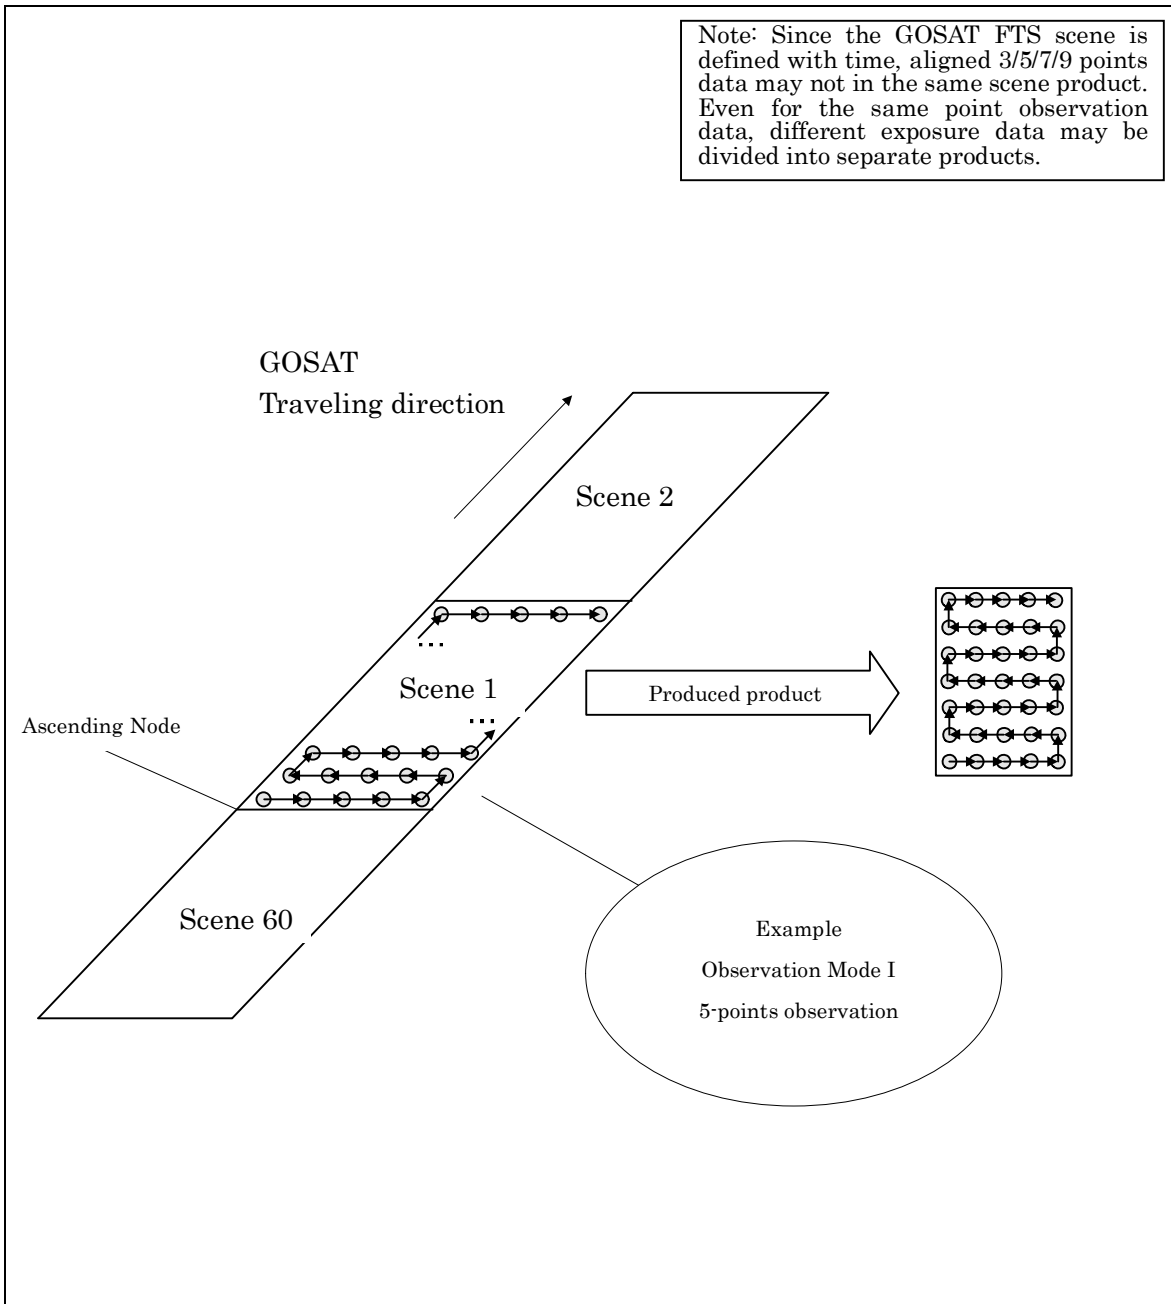

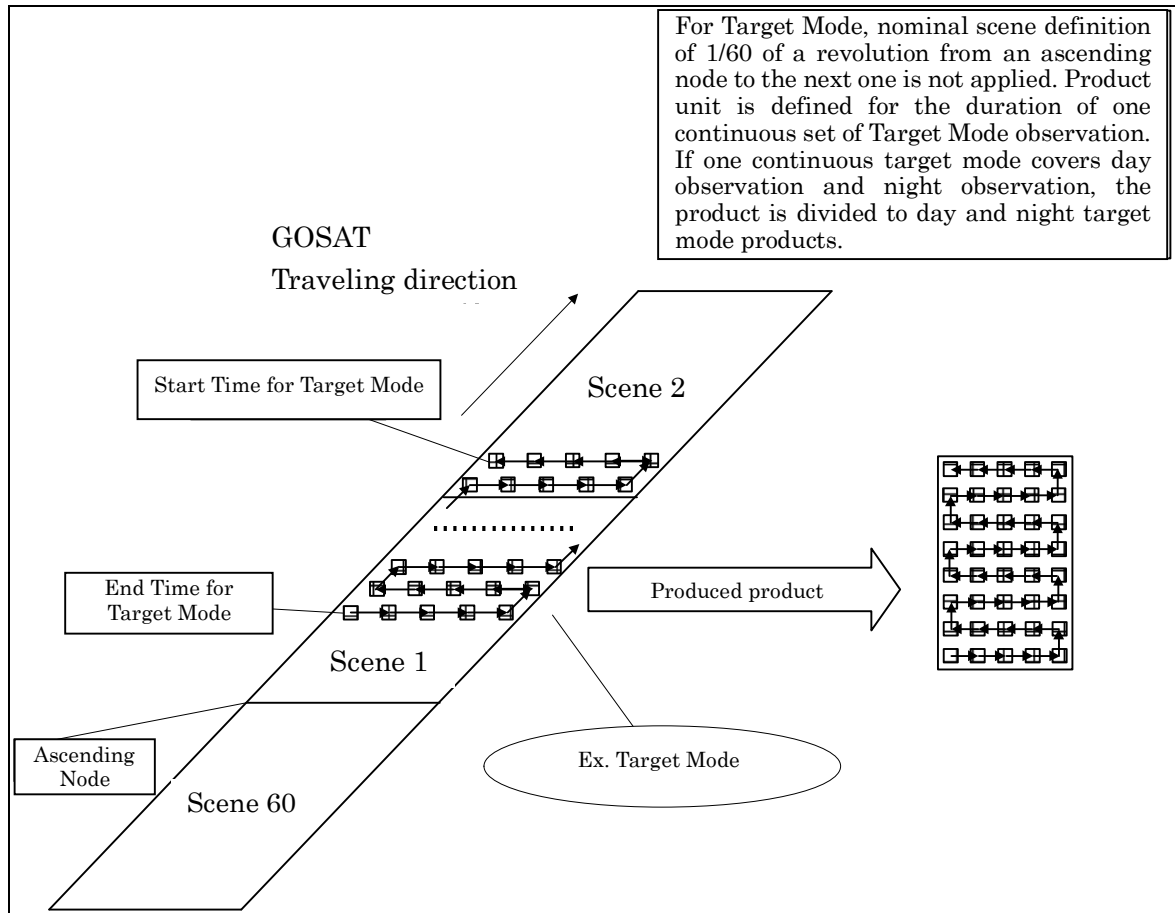

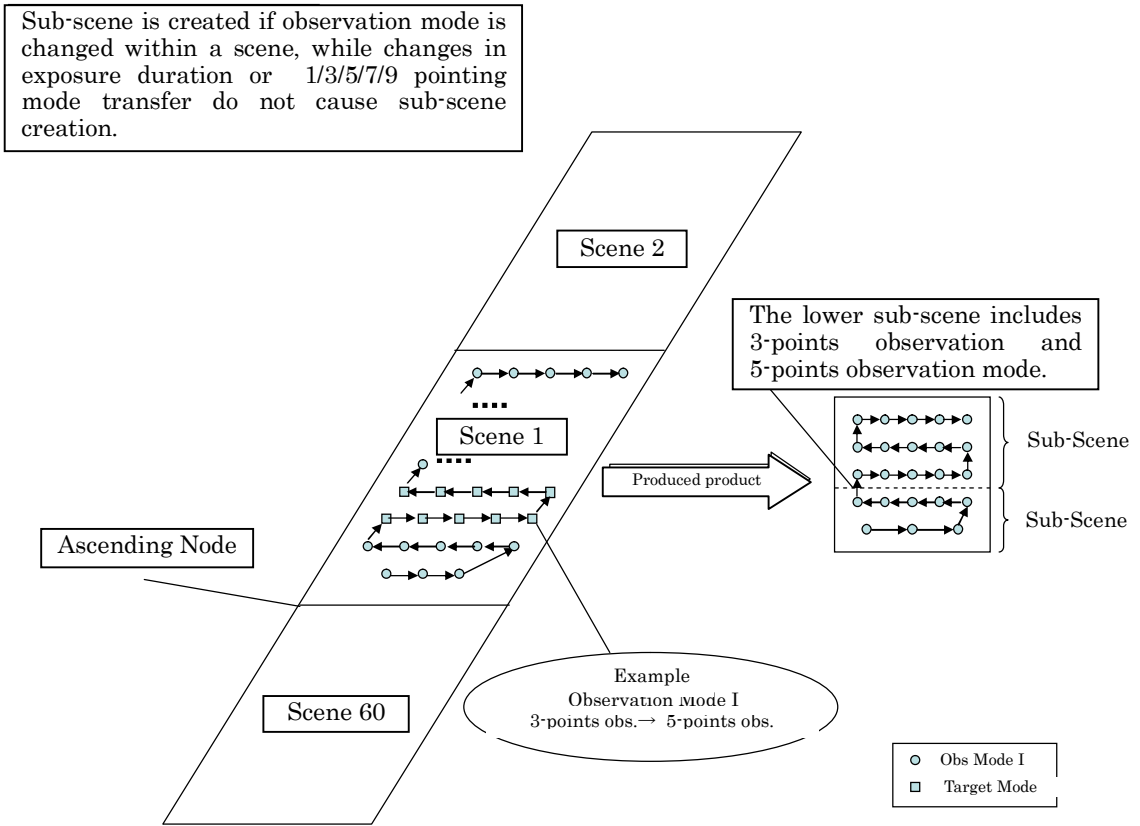

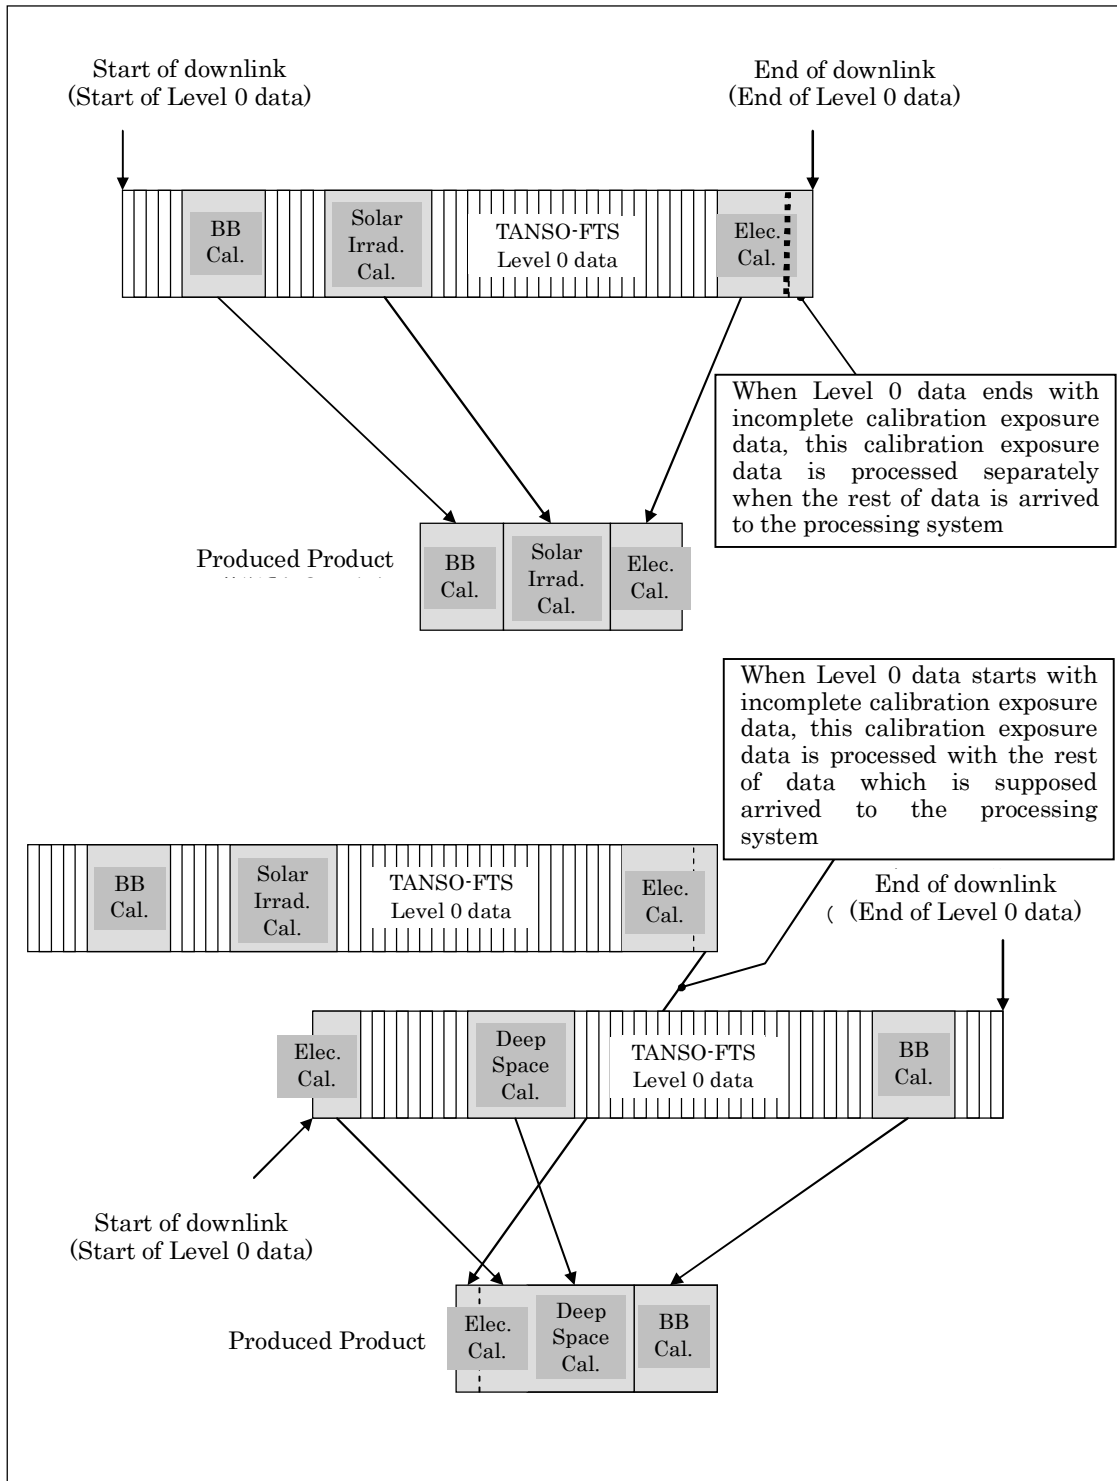

Figure 2-1: Product unit for Observation Mode I

2-2: Product unit for Target Mode

**2-3: Product unit when sub-scene is created**

**Figure2-4 Calibration mode product and case one calibration exposure divided to 2 sequential Level 0 data**

### 2.3. Data Contents

In TANSO-FTS nominal observation mode (Observation Mode I), equivalent distanced mesh points are observed systematically. TANSO-FTS scans Earth surface for cross track direction and observe 1, 3, 5, 7, or 9 locations per one cross-track scan. For 1 or 3 points scan mode, the same position is observed three times. Figure 2-5 shows an example of 5-points observation scan pattern. Table 2-2 gives information of exposure duration and number of exposures for the same point according to the each point-mode.

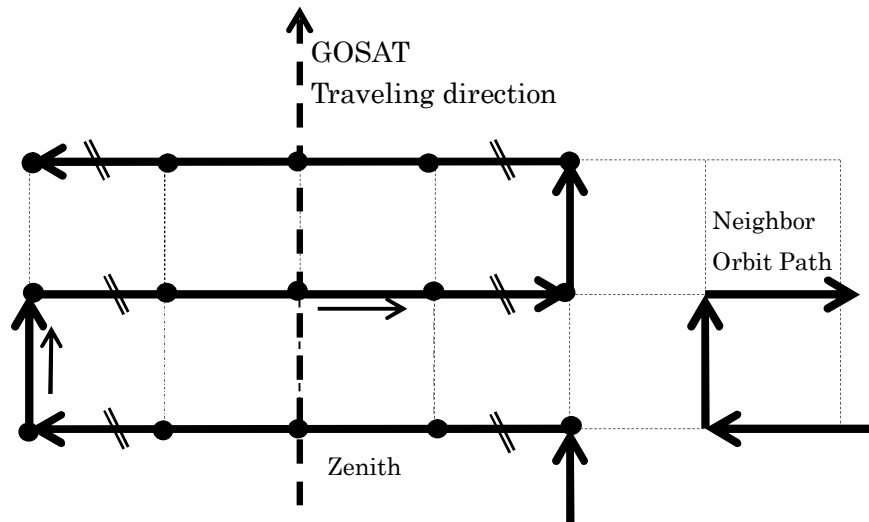

Figure 2-5 TANSO-FTS Nominal Observation Scan Pattern

Table 2-2 TANSO-FTS Scan Pattern and Exposure Pattern

Number of points For cross-track direction	Exposure Duration (sec)	Number of exposure for 1 point
1	4.0	3
3	4.0	3
5	4.0	1
7	2.0	1
9	1.1	1

For different TANSO-FTS scan pattern, exposure duration and turn-around time differ, and so product volume also differs. For Observation Mode II, AT/CT pointing direction will be fixed. Table 2-3 gives information on the data contents for each level and observation mode.

Table2-3 TANSO-FTS Data Contents

Processing Level	Observation Mode	Used Band	Data Contents (for one exposure)	Note
Level 1A	Observation Mode I (day)	SWIR(Band1-3) TIR(Band4)	SWIR band: 76,336 点×16bits	Nominal Observation
	Observation Mode I (night)	TIR	TIR: AC component 38,168 点×16bits	Ibid
	Observation Mode II	SWIR	TIR: DC component	
	Target Mode (day) (Sunlint・Target Mode)	SWIR TIR	38 点×12bits	Number of observation points differ from observation to observation.
	Target Mode (night) (Sunlint・Target Mode)	TIR		Ibid
Level 1A Calibration	Calibration Mode (Solar Irradiance)	SWIR	Ibid	Calibration using Solar Diffusion Reflector
	Calibration Mode (Blackbody)	TIR		Blackbody observation
	Calibration Mode (Deep Space)			Deep space observation
	Calibration Mode (Instrument Function)			Calibration using 1.55μm laser
	Calibration Mode (Electric)			Calibration using standard voltage signal input
Level 1A Lunar Cal.	Calibration Mode (Lunar)	SWIR TIR	Ibid	Calibration using moon for ~1.5 revolution duration
Level 1B	Observation Mode I (day)	SWIR TIR	SWIR each band: Defined wave number range × 32bits×2 (Real, Imagine)	Spectrum data are stored as real and imaginary parts for specified wave number range and no phase information is stored.
	Observation Mode I (night)	TIR		Ibid

Processing Level	Observation Mode	Used Band	Data Contents (for one exposure)	Note
	Observation Mode II	SWIR	TIR:	Ibid
	Target Mode (day) (Sunlint·Target Mode)	SWIR TIR	Defined wave number range × 32bits×2 (Real, Imagine)	Ibid
	Target Mode (night) (Sunlint·Target Mode)	TIR		Ibid
Level 1B Calibration	Calibration Mode (Solar Irradiance) ----- Calibration Mode (Blackbody) ----- Calibration Mode (Deep Space) ----- Calibration Mode (Instrument Function) ----- Calibration Mode (Electric)	SWIR TIR	SWIR each band: Defined wave number range × 32bits×2 (Real, Imagine) TIR: Defined wave number range × 32bits×2 (Real, Imagine)	Real and Imaginary part of spectral data for specified wave number region defined for each band. Phase information are not included specifically.
Level 1B Lunar Cal.	Calibration Mode (Lunar)	SWIR TIR	Ibid	Ibid

## 2.4. Geometrical Information

TANSO/FTS Level 1 products include geometrical information calculated using ephemeris, satellite attitude, and sensor geometrical configuration. The definitions of geometrical information are explained below.

### 2.4.1. Geolocation coverage of products

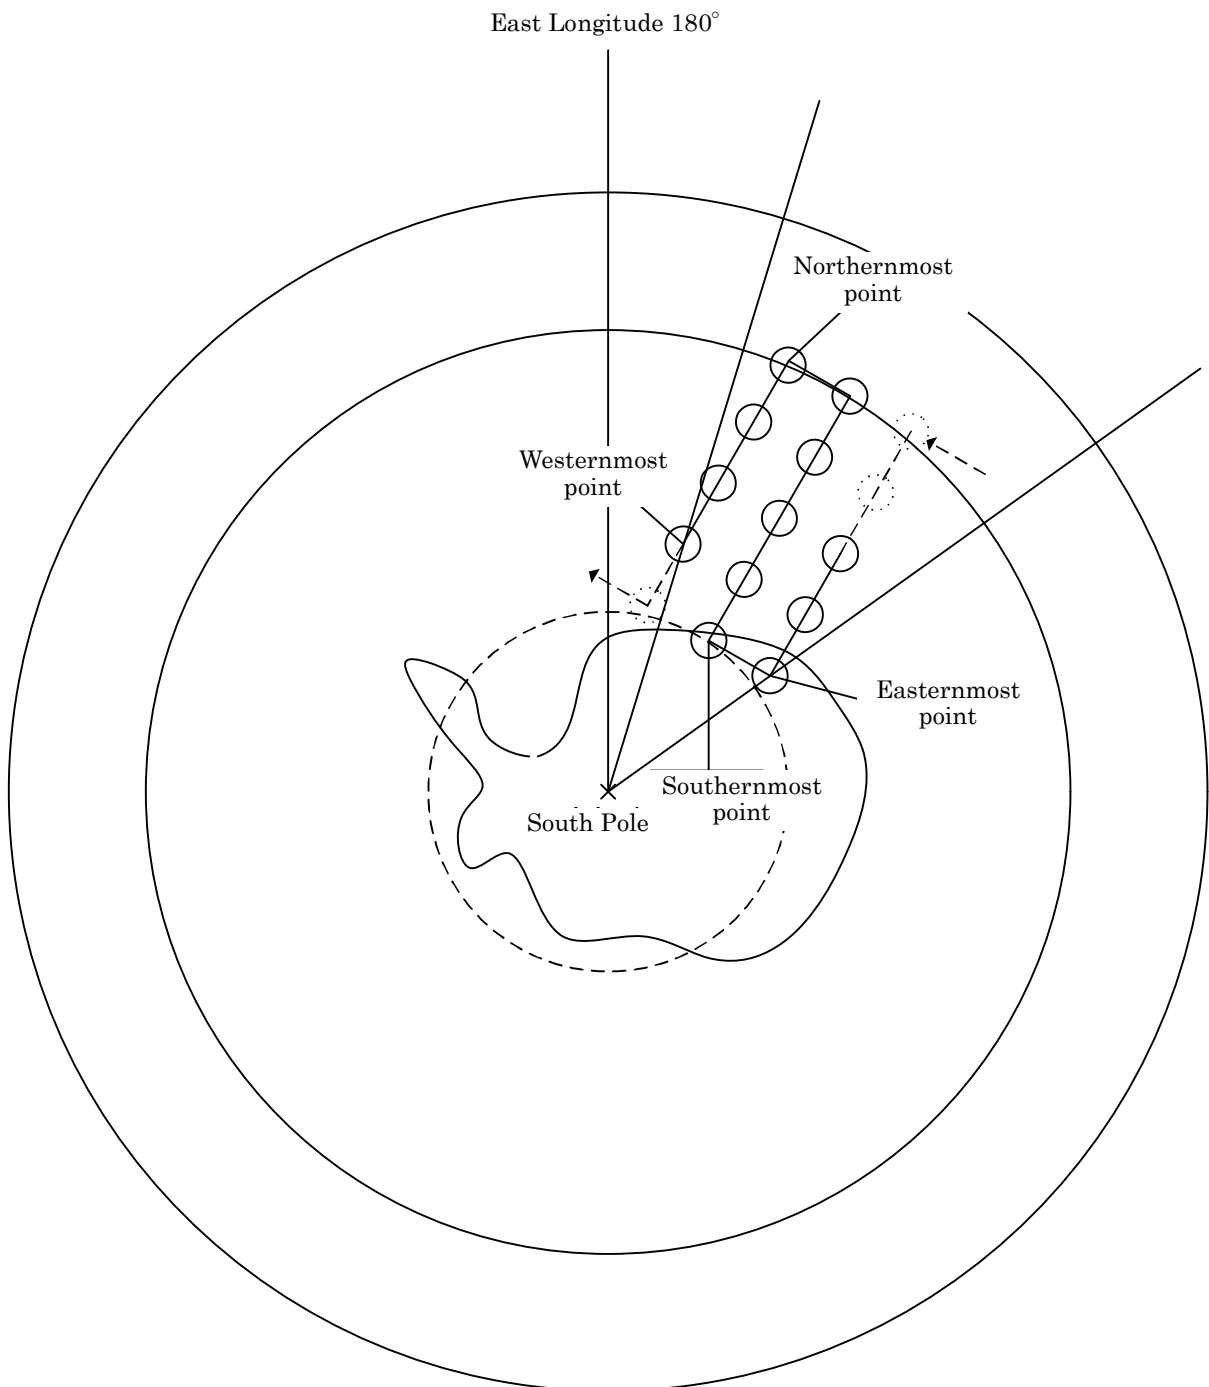

FTS L1 product includes Northernmost, Westernmost, Southernmost, and Easternmost points information to indicate geolocation area coverage. Northernmost point is defined as the northernmost point of the center of all geo-locations of observed interferogram (IGM) included in the product. The Westernmost point is also defined as the westernmost point of the center of all geo-locations of observed IGM included in the product. Southernmost and Easternmost points are also defined with the same way.

The Following shows an example.

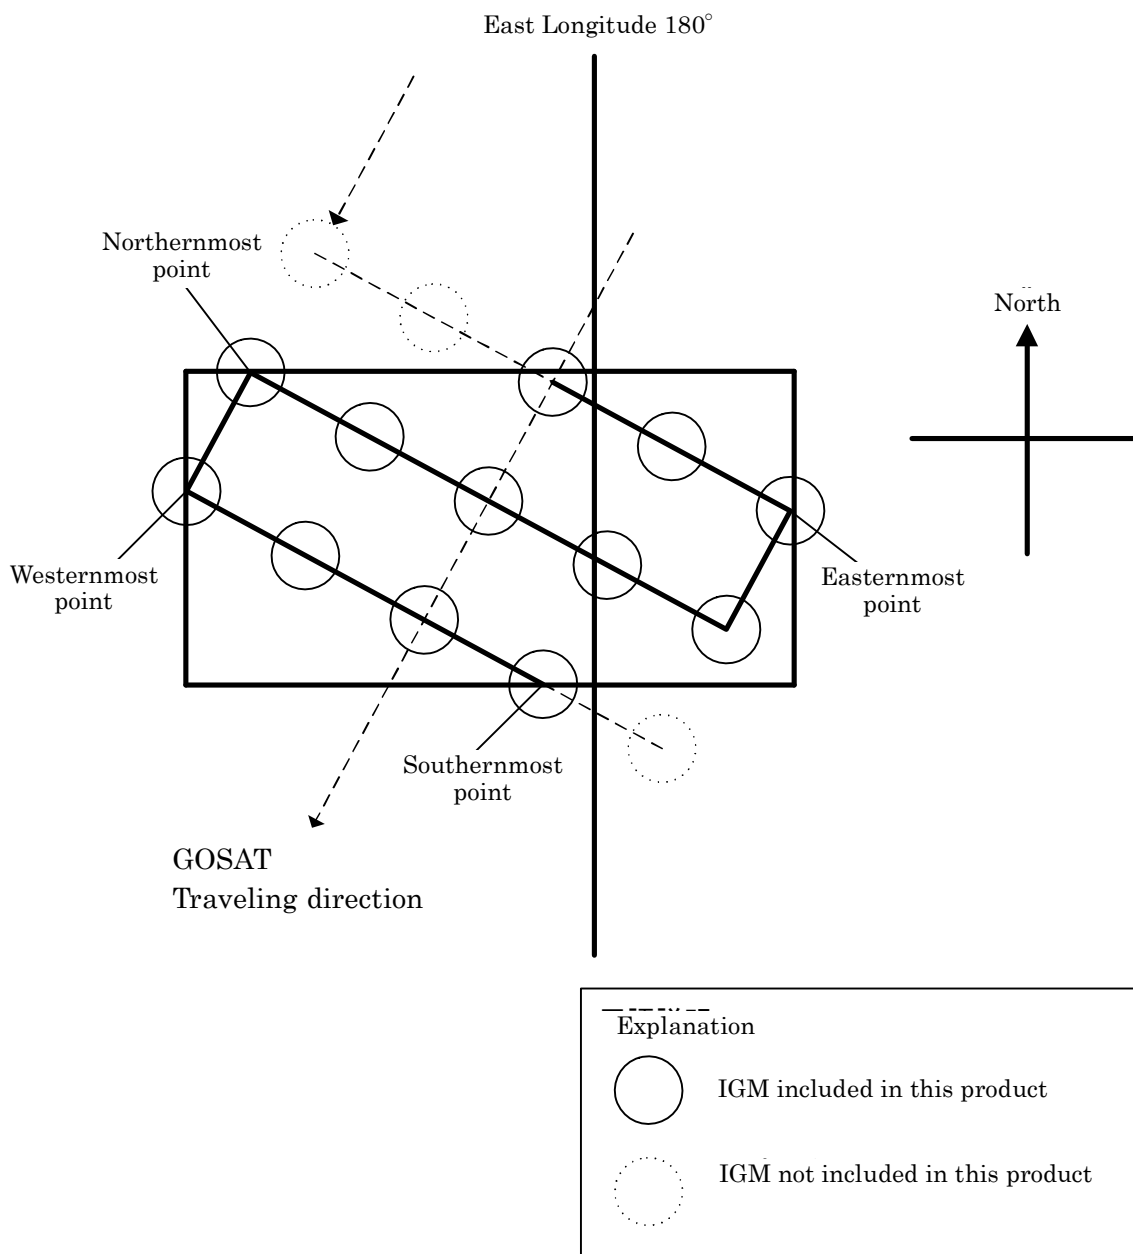

**Figure2-6 Example of Northern/Western/Southern/Eastern-most points**

As a special case, if one product includes data crossing near north or south pole Northernmost or Southernmost point is defined as the nearest point to the north pole or south pole. Easternmost and Westernmost points are defined as below:

**Figure 2-7 Example of Northern/Western/Southern/Eastern-most points near South Pole**

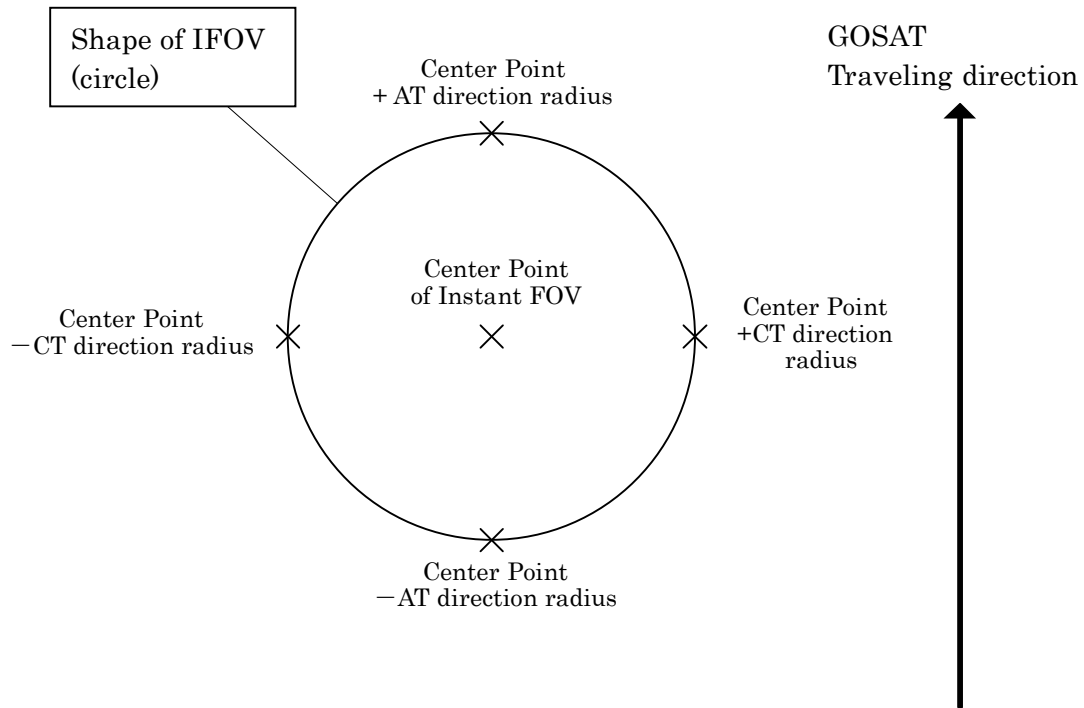

If data included in a product crosses over the east (or west) longitude 180° line, the Westernmost and Easternmost points are defined as below, which is the same way as Figure 2-6.

**Figure2-8 Example of Northern/Western/Southern/Eastern-most points crossing the east longitude 180° line**

**2.5. Land/Ocean Flag**

FTS Level 1 product includes Land/Ocean flag information to indicate whether the observed earth surface is land or water (ocean/lake/river). As shown in Figure 2-9, if all 5 points within an interferogram footprint are land, the flag is defined as land. If all of them are water, the flag becomes water. For the other cases, it is defined as mixed.

**Figure2-9 Points for Land/Ocean flag judgment**

## 2.6. Sunlint Flag

FTS L1 product includes Sunlint flag to indicate whether each exposure is sunlint observation or not. In case the land/ocean flag for a specified exposure is ocean or mixed, and if the incident angles of sun light and sensor line of sight agree at the observed earth surface point, and also if the azimuth angles of sun direction and satellite direction at the observed point differ by 180 degree, its sunlinting flag is defined as sunlint. By the way the agreement is judged with a certain criteria defined separately. Angles used for this judgment are shown in Figure 2-10.

**Figure2-10 Angles for sunlint judgment (Projection to X-Y plane)**

## 2.7. Sensitivity Correction Data

Sensitivity correction data for SWIR band are not included in FTS L1 product. The information are given in a separate file.

Sensitivity correction data will be available at GOSAT web pages at JAXA and NIES. (TBD)

## 2.8. Method of geometrical correction (Derivation of sensor line of sight)

### (1) Vector of sensor line of sight

The followings describe the derivation method for the vector of sensor line of sight in sensor (FTS) coordinate. If without sensor alignment error, the satellite coordinate and the sensor coordinate are identical. FTS pointing mechanism has its own coordinate, but AT/CT angles mentioned here are in sensor coordinate. The sensor alignment error evaluated on the ground before launch are used as default value, but the values derived from on orbit geometrical calibration may be used if necessary.

If we write CT angle and AT angle of pointing mechanism as  $\theta_{CT}$  and  $\theta_{AT}$ , respectively, ( $\theta_{AT}$  has the opposite sign and half value of what is output as sensor

telemetry), vector of the sensor line of sight is given as:

$$b_{LOS}(N, n) = a_{opt}(N, n) - 2(a_{opt}(N, n) \cdot n_{PM})n_{PM},$$

where  $a_{opt}(N, 0)$  is the light vector on FTS optical bench, which is given as

$$a_{opt}(N, 0) = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} \text{ in sensor coordinate. Alignment error will be handled by trimming this}$$

optical axis vector. Alignment error may differ among each band/channel, the error values are given for each  $N$  ( $N=1P, 1S, 2P, 2S, 3P, 3S, 4$ ). Besides the optical axis vector for the center position of FTS FOV, following 4 optical axis vectors are defined using FTS FOV radius angle of  $\theta$  r, which has a default value of 0.45 degree independent of band/channel:

$$a_{opt}(N, 1) = \begin{pmatrix} \cos \theta r \\ \sin \theta r \cdot \cos \theta_{CT} \\ \sin \theta r \cdot \sin \theta_{CT} \end{pmatrix}, \quad a_{opt}(N, 2) = \begin{pmatrix} \cos \theta r \\ -\sin \theta r \cdot \sin \theta_{CT} \\ \sin \theta r \cdot \cos \theta_{CT} \end{pmatrix},$$

$$a_{opt}(N, 3) = \begin{pmatrix} \cos \theta r \\ -\sin \theta r \cdot \cos \theta_{CT} \\ -\sin \theta r \cdot \sin \theta_{CT} \end{pmatrix}, \quad \text{and} \quad a_{opt}(N, 4) = \begin{pmatrix} \cos \theta r \\ \sin \theta r \cdot \sin \theta_{CT} \\ -\sin \theta r \cdot \cos \theta_{CT} \end{pmatrix}.$$

$n_{PM}$  is the normal vector of the pointing mechanism plane and written as

$$n_{PM} = \begin{pmatrix} -\sin(\pi/4 - \theta_{AT}) \\ -\sin(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \\ \cos(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \end{pmatrix}.$$

Then the vector of sensor line of sight corresponding to the light vector on optical bench is given as

$$b_{LOS}(N, 0) = \begin{pmatrix} 1 - 2 \sin^2(\pi/4 - \theta_{AT}) \\ -2 \sin(\pi/4 - \theta_{AT}) \sin(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \\ 2 \sin(\pi/4 - \theta_{AT}) \cos(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \end{pmatrix} = \begin{pmatrix} \sin(2\theta_{AT}) \\ -\sin(\theta_{CT}) \cos(2\theta_{AT}) \\ \cos(\theta_{CT}) \cos(2\theta_{AT}) \end{pmatrix}.$$

Likewise, the vectors of line of sights for outer 4 points are given as follows:

$$b_{LOS}(N, n) = a_{opt}(N, n) - 2(a_{opt}(N, n) \cdot n_{PM})n_{PM}$$

Polarization vectors are defined as follows. When TANSO-FTS directs zenith, the polarized light detected with the sensor on Z-X plane is the prime band (P-band) and that on Y-Z plane is the secondary band (S-band). Thus, the vectors for polarization axis for P and S band on optical bench are given as

$$a_{optP} = \begin{pmatrix} 0 \\ 0 \\ 1 \end{pmatrix} \quad \text{and} \quad a_{optS} = \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix}, \text{ since liner polarized light becomes maximum for this}$$

direction. Therefore, polarization vectors are given as:

$$b_{LOSP} = \begin{pmatrix} 2 \cos(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \sin(\pi/4 - \theta_{AT}) \\ 2 \cos(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \sin(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \\ 1 - 2 \cos^2(\theta_{CT}) \cos^2(\pi/4 - \theta_{AT}) \end{pmatrix} = \begin{pmatrix} \cos(\theta_{CT}) \cos(2\theta_{AT}) \\ \cos(\theta_{CT}) \sin(\theta_{CT}) (1 + \sin(2\theta_{AT})) \\ 1 - \cos^2 \theta_{CT} (1 + \sin(2\theta_{AT})) \end{pmatrix}$$

$$b_{LOSS} = \begin{pmatrix} -2 \sin(\theta_{CT}) \cos(\pi/4 - \theta_{AT}) \sin(\pi/4 - \theta_{AT}) \\ 1 - 2 \sin^2(\theta_{CT}) \cos^2(\pi/4 - \theta_{AT}) \\ 2 \sin(\theta_{CT}) \cos(\theta_{CT}) \cos^2(\pi/4 - \theta_{AT}) \end{pmatrix} = \begin{pmatrix} -\sin(\theta_{CT}) \cos(2\theta_{AT}) \\ 1 - \sin^2(\theta_{CT}) (1 + \sin(2\theta_{AT})) \\ \sin \theta_{CT} \cos \theta_{CT} (1 + \sin(2\theta_{AT})) \end{pmatrix}.$$

These polarization vectors are not used in level 1 processing, but information are given for users convenience.

(2) Alignment of pointing mechanism (PM) (Correction is done within the controller of pointing mechanism [TBD])

Error angles of TANSO-FTS alignment for PM-A and PM-B when FTS optics (FTS-OPT) directs zenith (sign of values are explained separately) are given in the table below.

	PM-A	PM-B
AT(LOS) (degree)	+0.15	+0.37
CT (degree)	-1.24	-0.24

The telemetry value for AT angle of pointing mechanism is twice of that of the actual mechanical rotation angle.

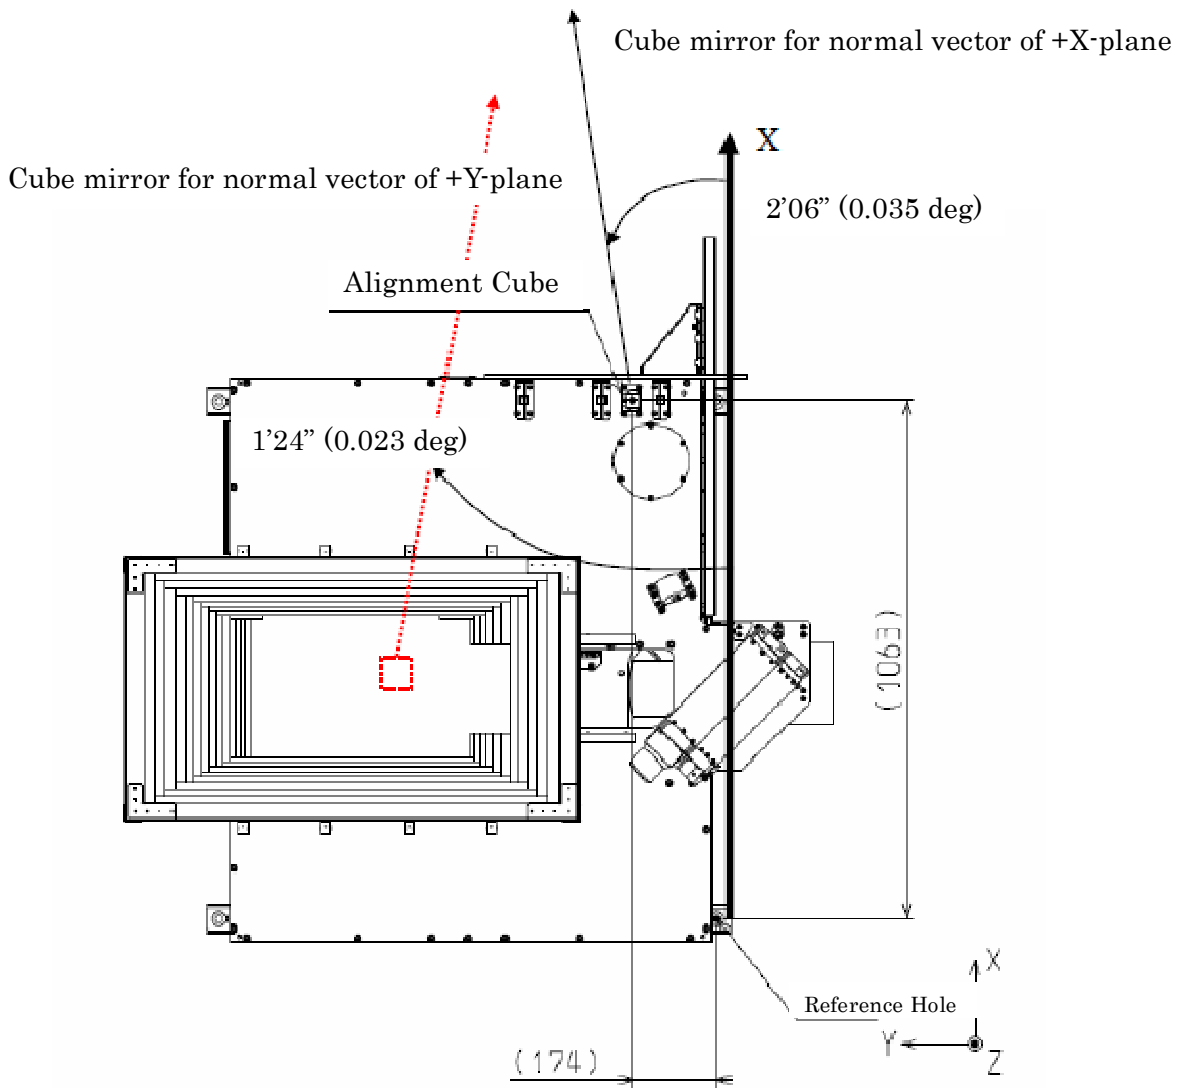

(3) Alignment error between FTS optical bench and satellite

Alignment error between the FTS optical bench and the satellite is corrected within the controller of pointing mechanism (TBD). And so, in level 1 processing and MMO planning, alignment error between the sensor coordinate and the satellite coordinate is taken care. The table below gives information

	around X-axis	around Y-axis	around Z-axis
Between FTS optical bench and TANSO FTS coordinate (degree)	Refer to the figure below	Refer to the figure below	Refer to the figure below
Between FTS coordinate and satellite coordinate (degree) ※	-0.01514	-0.01906	0.03069

※ The measured value in April 2008

Bench mirror for normal vector of -Y-plane

#### (4) Formula for alignment correction

In Target Mode planning in GOSAT Mission Management Organization (MMO) and geo-location derivation in level 1 processing, alignment error is taken in account. As described above, alignment errors between FTS optical bench and FTS PM and between FTS coordinate and FTS optical bench are corrected within the onboard controller of PM. No correction in ground system (MMO or L1 processing system) is necessary (To be confirmed). In the telemetry, the sign of values are in the original PM coordinate and not converted to the FTS or satellite coordinate.

The alignment correction between FTS coordinate and satellite coordinate is taken care of by MMO in planning using following formulae:

$$\begin{pmatrix} CT_{sat} \\ AT_{sat} \end{pmatrix} = \begin{pmatrix} 1 & \sin(0.003069) \\ -\sin(0.003069) & 1 \end{pmatrix} \begin{pmatrix} -1 & 0 \\ 0 & -1 \end{pmatrix} \begin{pmatrix} CT_{tc} \\ AT_{tc} \end{pmatrix} + \begin{pmatrix} -0.01906 \\ -0.01514 \end{pmatrix}.$$

Subscript sat means the variable is in satellite coordinate, and tc is for telemetry in PM coordinate whose sign is opposite to satellite coordinate.

### 3. Product Format

#### 3.1. Data Structure

TANSO-FTS Level 1 product includes metadata, global which contains the other sensor specific metadata, scan attribute which corresponds to each exposure point, ancillary data which do not coincide with each exposure, and image data, all of which follow JPM 2.0 standard.

Dataset structure of TANSO-FTS Level 1 product is given in Table 3-1.

**Table 3-1 Dataset Structure of TANSO-FTS Level 1 Product**

No	Group	Name	Outline
1	Global	Global	Items below are given as explanation of product type, contents, etc. following JMP2.0 standard. <ul style="list-style-type: none"> <li>• Product File Name</li> <li>• Sensor Name</li> <li>• Processing Level</li> <li>• Observation Mode</li> <li>• Processing Algorithm Name and its version</li> <li>• Start and end time of observation</li> <li>• Metadata items following JMP2.0 standard</li> </ul>
2	Exposure Attribute	exposureAttribute	Items below are given as information corresponding to each exposure: <ul style="list-style-type: none"> <li>• Time of observation</li> <li>• Geolocation of observed point (WGS84)</li> <li>• Quality information of data</li> <li>• Position of Sun and Moon</li> <li>• Land/Ocean flag, Sunlint flag</li> <li>• Raw ancillary data included in Level 0 data</li> <li>• Phase correction information</li> <li>• Quality flag (saturation flag at ZPD, amplitude of low frequency component)</li> </ul>
3	Interferogram	Interferogram	Sensor data are included as mission data for Level 1A <ul style="list-style-type: none"> <li>• Interferogram</li> </ul>
4	Spectrum	Spectrum	Spectral data are included which is transformed from interferogram for Level 1B <ul style="list-style-type: none"> <li>• Spectra (Real part &amp; Imaginary part)</li> </ul>
5	Ancillary	Ancillary	Items below are given as information not coincide with each exposure <ul style="list-style-type: none"> <li>• Calibration data</li> <li>• Engineering transformation coefficients for interferogram</li> <li>• Ephemeris data</li> <li>• Attitude data</li> <li>• Clock correction information</li> <li>• Non linearity correction coefficients</li> <li>• Range of wave number or optical path difference used for phase correction</li> <li>• Wave number of spectral radiance (Max, Min, &amp; elements)</li> <li>• Method of Fourier Transformation</li> </ul>

### 3.2. Details of raw ancillary data

FTS level 1 product includes raw ancillary data from sensor. Raw ancillary data is that in SP (Space Packet) format. Format of raw ancillary data is given below.

CCSDS PH	CCSDS Primary Header	6 octets
CCSDS SH	CCSDS Secondary Header	5 octets
ELU Header	Reserved	2 octets
	ANC/DATA	1 bit
	Sensor ID	7 bit
	Data Count	1 octet
	Segment Count	1 octet
Sensor Ancillary	FTS Status	6 octets
	Time Information	5 octets
	Sensor internal Counter Value	2 octets
	Reserved	1 octet
	PCD	118 octets
	FTS TLM	320 octets
Checksum	Checksum	1 octet

The increment of sensor packet sequence counter differs depending on sensor ID. Table3-2 gives increment information.

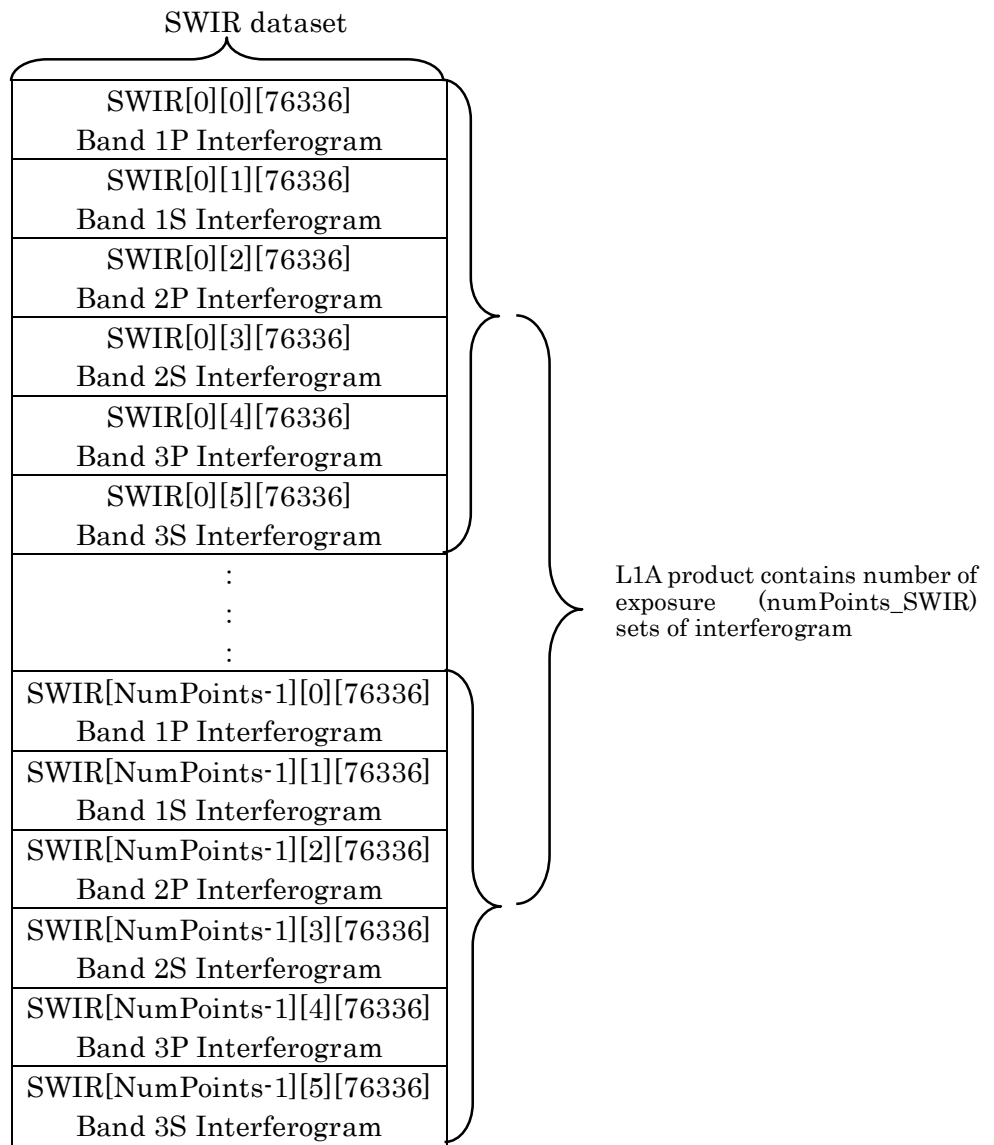

**Table3-2 Increment of Sequence Counter**

SENSOR ID (binary)	Increment
0001001	1
0000000	77 or 40

### 3.3. Details of Interferogram

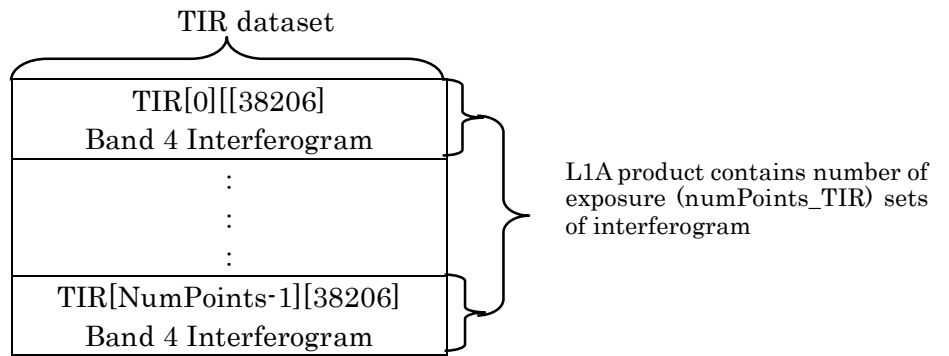

FTS Level 1A products contains interferogram data. Format of interferogram data part is given below.

Interferogram data (SWIR) has following structure in L1A product.

3-1 Details of Interferogram Format (SWIR)

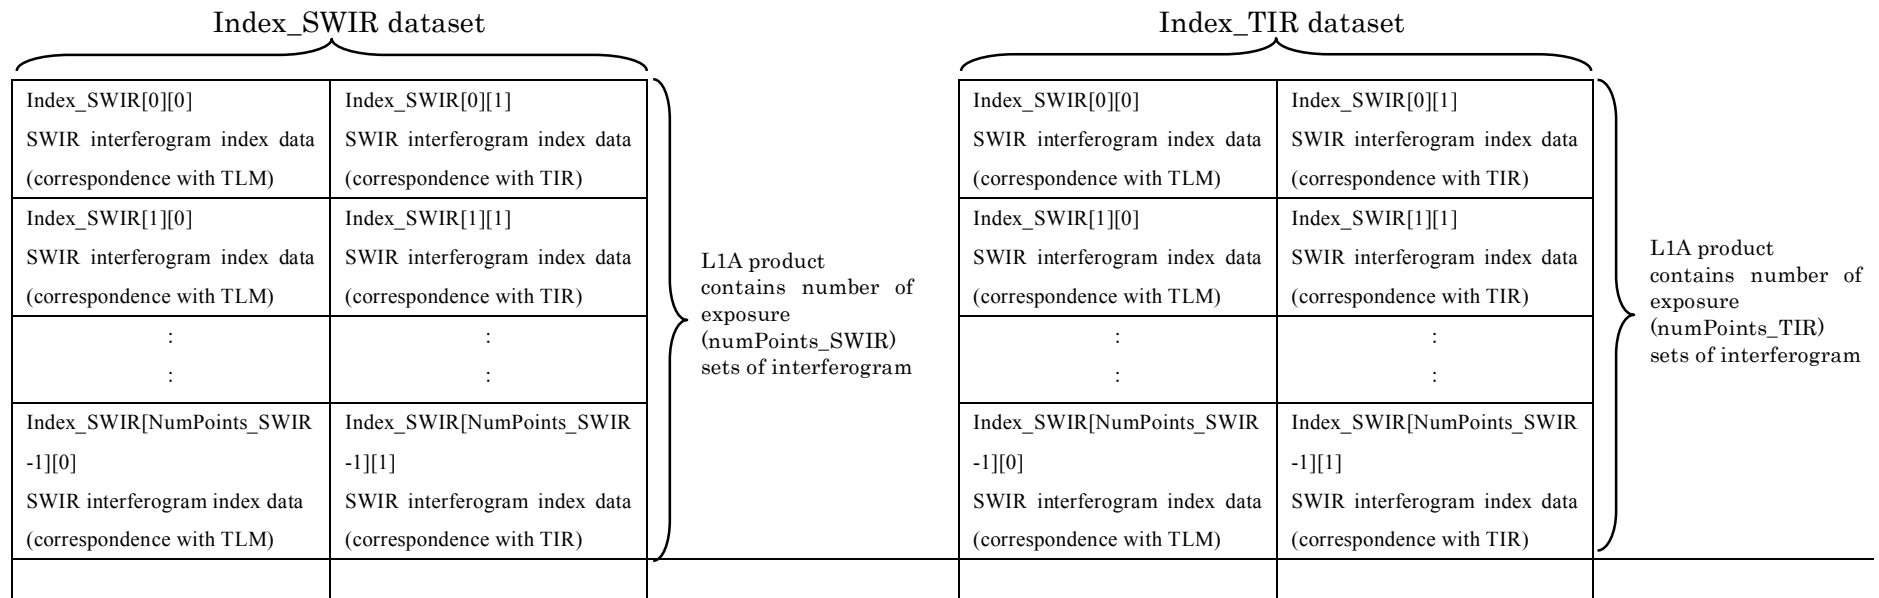

Interferogram data (TIR) has following structure in L1A product

3-2 Details of Interferogram Format (TIR)

TANSO-FTS (Index\_SWIR/Index\_TIR)

In case day mode and night mode data mixed in a product, which may occur only for calibration product, the product includes index information to indicate the correspondence between SWIR and TIR interferogram/spectrum/telemetry (TLM) for each band in the following data structure.

index\_SWIR[a][b] is defined for:

$$0 \leq a \leq \text{NumPoints\_SWIR}-1$$

$$0 \leq b \leq 1$$

Index\_SWIR[a][b] takes value range as follows:

$$1 \leq \text{SWIR}[a][0] \leq \text{numPoints} \text{ for } b=0$$

$$-1 \mid 1 \leq \text{SWIR}[a][1] \leq \text{numPoints\_TIR} \text{ for } b=1,$$

where -1 means no corresponding TIR data

Index\_TIR[a][b] is defined for:

$$0 \leq a \leq \text{NumPoints\_TIR}-1$$

$$0 \leq b \leq 1$$

Index\_TIR[a][b] takes value range as follows:

$$1 \leq \text{TIR}[a][0] \leq \text{numPoints} \text{ for } b=0$$

$$-1 \mid 1 \leq \text{TIR}[a][1] \leq \text{numPoints\_SWIR} \text{ for } b=1,$$

where -1 means no corresponding SWIR data

Figure 3-2 Details of Index (Index\_SWIR/Index\_TIR)

	SWIR dataset	Index_SWIR dataset	TIR dataset	Index_TIR dataset	TLM (temp, gain, etc)
Solar Irradiance Calibration SWIR + TIR 19 Exposures	SWIR[0][0][152672] 1st SWIR exposure	Index for 1 <sup>st</sup> SWIR exposure Index_SWIR[0][0]=1, corresponding TLM Index_SWIR[0][1]=1, corresponding TIR dataset	TIR[0][0][74363] 1st TIR exposure	Index for 1 <sup>st</sup> TIR exposure Index_TIR[0][0]=1, corresponding TLM Index_TIR[0][1]=1, corresponding SWIR dataset	TLM[0] 1st exposure
	:	:	:	:	:
	SWIR[18][0][152672] 19th SWIR exposure	Index for 19th SWIR exposure Index_SWIR[18][0]=19, corresponding TLM Index_SWIR[18][1]=19, corresponding TIR dataset	TIR[18][0][ 74363] 19th TIR exposure	Index for 19th TIR exposure Index_TIR[18][0]=19, corresponding TLM Index_TIR[18][1]=19, corresponding SWIR dataset	TLM[18] 19th exposure
Blackbody & Deep Space Calibration (night) TIR only No SWIR output 8 Exposures	No Data	No Data	TIR[19][0][ 74363] 20th TIR exposure	Index for 20th TIR exposure Index_TIR[19][0]=20, corresponding TLM Index_TIR[19][1]=20, corresponding SWIR dataset	TLM[19] 20th exposure
			:	:	:
			TIR[26][0][ 74363] 27th TIR exposure	Index for 20th TIR exposure Index_TIR[26][0]=27, corresponding TLM Index_TIR[27][1]=-1, corresponding SWIR dataset	TLM[26] 27th exposure
Sensor Mechanical Function Calibration SWIR only No TIR output 6 Exposures	SWIR[19][0][152672] 20th SWIR exposure	Index for 20th SWIR exposure Index_SWIR[19][0]=28, corresponding TLM Index_SWIR[19][1]=-1, corresponding TIR dataset	No Data	No Data	TLM[27] 28th exposure
	:	:			:
	SWIR[25][0][152672] 26th SWIR exposure	Index for 25th SWIR exposure Index_SWIR[24][0]=33, corresponding TLM Index_SWIR[25][1]=-1, corresponding TIR dataset			TLM[32] 33rd exposure
Blackbody & Deep Space Calibration (day) SWIR + TIR 8 Exposures	SWIR[25][0][152672] 26th SWIR exposure	Index for 26th SWIR exposure Index_SWIR[25][0]=34, corresponding TLM Index_SWIR[19][1]=28, corresponding TIR dataset	TIR[27][0][ 74363] 28th TIR exposure	Index for 28th TIR exposure Index_TIR[27][0]=34, corresponding TLM Index_TIR[27][1]=26, corresponding SWIR dataset	TLM[33] 34th exposure
	:	:	:	:	:

Figure 3-3 Example of index contents (Index\_SWIR/Index\_TIR)

### 3.4. Format Details

Table 3-2 shows the details of TANSO-FTS Level 1 product format. Table below gives some notices on the expression used in product format description.

Expression	Note
UTC	<ul style="list-style-type: none"> <li>• Leap seconds included</li> <li>• Given by year, month, day, hour, minute, second unless otherwise specified</li> </ul>
Coordinate	<ul style="list-style-type: none"> <li>• In ECR unless otherwise specified</li> </ul>
Latitude	<ul style="list-style-type: none"> <li>• Goedetic latitude unless otherwise specified</li> </ul>
Sun Position	<ul style="list-style-type: none"> <li>•特に断りが無い限り、均時差を考慮したみかけの太陽位置で表される</li> </ul>

Each raw used in product format has following information.

Name of raw	Meanings
Grouppath/Dataset Name	If folder mark is set, it is in HDF5 group and has its name. Without folder mark, it is HDF5 dataset and has its name.
Database (Dimension)	Rand o HDF5 database. Database is given as attribute (Dimension Explanation) of dataset and in “String” data type.
Database (Size)	Size corresponding to each dimension is given.given. Ex.) If dimension is 2 and size is given as 4, 5, it can be expressed as array[4][5] in C language structure.
Attribute (Name of attribute)	Name in HDF5 attribute is given
Attribute (Number of attribute)	Number of attribute for its group/dataset is given.
Data Type	HDF5 のデータタイプを持つ。
Dataset Name (Japanese Name)	Japanese name for dataset is given
Explanation (Format)	<p>Format of contained value is given.</p> <p>If value to store is determined, candidate values are given in ””. If data type is H5T_NATIVE_CHAR, character array or 8 bit integer is given. For such cases, the expression in “ “ are given below.</p> <p>For character array, if the database (size) is larger than character array size, they are stored left-aligned and the left space are filled with null characters (0x00). If the database (size) and character array has same size, no null character is stored. In expression, null characters are omitted.</p> <p>For 8 bit integer, at the lead inside “ “, 0x indicating hex value is given in this document, while 0x is not stored in the actual string.</p> <p>If the data value has its effective range, minimum and maximum limit values are stored as string data type as attribute (Value Range).</p> <p>Inside (“ “), minimum and maximum values are given in this order separated by “,”.</p> <p>Ex.) (-90.0.90.0)</p>
Unit	If the data value has unit, this gives its unit C corresponds to temperature unit in Celsius.

Invalid value	Value given when the value cannot be derived or defined. Invalid value is given as attribute (Invalid Value) with date type of "String". Ex.) -8192
Note	Note is given if any

User definition dataset used in product format is followings. Year is given in AD with 4 digits. Month and day are given as integer starting from 1. Hour, minutes, and second are also given as integer starting from 0.

User Definition Dataset	Format
USERDATE_YMDHMS	USERDATE_YMDHMS { int year, char month, char day, char hour, char min, float sec }

### 3.5. Structure of Global Dataset

Contents included in global dataset are described below.

Table 3-2 Details of TANSO-FTS Product Format

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
Global										
MD_Metadata(JMP2.0 Data)										
fileIdentifier	1	60	-	0	H5T_NATIVE_CHAR	File Identifier (Granule ID) (ファイル識別子 (グラニューールID))	Granule ID Granule ID of this product (refer to NEB-060005 (Definition of EIS Granule ID "EISグラニューールID体系"), in Japanese)	-	-	Since satellite name information is included in granule ID, only granule ID is given here.
characterSet	1	3	-	0	H5T_NATIVE_CHAR	Character Set (文字集合)	"004": UTF-8 Fixed	-	-	
dateStamp	1	10	-	0	H5T_NATIVE_CHAR	Date Stamp (日付)	"YYYY-MM-DD" Date of product creation(UTC)	-	-	Time when creation job started is given.
hierarchyLevel	1	3	-	0	H5T_NATIVE_CHAR	Leven in Hierarchy (階層レベル)	"005": Header for dataset Fixed	-	-	
metadataStandardName	1	22	-	0	H5T_NATIVE_CHAR	Name of Metadata Standard (メタデータ規格の名称)	"Japan Metadata Profile" Fixed	-	-	
metadataStandardVersion	1	3	-	0	H5T_NATIVE_CHAR	Version of Metadata Standard (メタデータ規格の版)	"2.0" Fixed	-	-	
IdentificationInfo (Data Identification Information)										
MD_DataIdentification (Data Identification)										
abstract	1	256	-	0	H5T_NATIVE_CHAR	Abstract (要約)	"TBD":TBD Fixed	-	-	
purpose	1	256	-	0	H5T_NATIVE_CHAR	Purpose (目的)	Purpose of data to be given "TBD": TBD Fixed	-	-	
status	1	3	-	0	H5T_NATIVE_CHAR	Status (状態)	"001": Complete Fixed	-	-	In case processing aborts with error, this product is not output, therefore output always has value for "complete" status.
spatialRepresentationType	1	3	-	0	H5T_NATIVE_CHAR	Spatial Representation Type (空間表現型)	"001": Vector Fixed	-	-	
characterSet	1	3	-	0	H5T_NATIVE_CHAR	Character Set (文字集合)	"004": UTF-8 Fixed	-	-	
topicCategory	1	3	-	0	H5T_NATIVE_CHAR	Topics Category (主題分類)	"007": Environment Fixed	-	-	
citation(引用)										
title	1	23	-	0	H5T_NATIVE_CHAR	Title (題名)	"TANSO-FTS/GOSAT product" Fixed	-	-	
date(日付)										
date	1	10	-	0	H5T_NATIVE_CHAR	Date (日付)	"YYYY-MM-DD" Date of scene center (UTC) (year, month, day)	-	-	
dateType	1	3	-	0	H5T_NATIVE_CHAR	Date Type (日付型)	"001": creation date Fixed	-	-

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
Spectrum										
Index_SWIR	2	numPoints_SWIR, 2	-	0	H5T_NATIVE_SHORT	SWIR Spectrum Data Index (SWIRスペクトルデータインデックス)	Indices to indicate correspondence with TLM and TIR radiometric correction information data for the specified exposure are stored. Indices start with 1. This dataset is only for L1B product.	-	-	
Index_TIR	2	numPoints_TIR, 2	-	0	H5T_NATIVE_SHORT	TIR Spectrum Data Index (TIRスペクトルデータインデックス)	Indices to indicate correspondence with TLM and SWIR radiometric correction information data for the specified exposure are stored. If corresponding SWIR interferogram data does not exist, value indicating invalid data is stored. Indices start with 1. This dataset is only for L1B product.	-	-	

Table 3-2 Details of TANSO-FTS Product Format

NEB-080031

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
SWIR (SWIR spectrum)										
band1 (Band1 spectrum)										
lowWavelength	4	numPoints_SWIR, 2, 2020, 2	-	0	H5T_NATIVE_FLOAT	SWIR Spectral Data (Lower Frequencies) (SWIRスペクトルデータ (低周波成分))	Radiance spectrum data in lower frequencies before sensitivity correction transformed from band 1 interferogram for the specified exposure is stored in the order of exposures, polarization, wave number, complex values. The order of polarization and complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	V/cm-1	-	
obsWavelength	4	numPoints_SWIR, 2, 6565, 2	-	0	H5T_NATIVE_FLOAT	SWIR Spectral Data (Observation) (SWIRスペクトルデータ (観測成分))	Radiance spectrum data in observation frequencies before sensitivity correction transformed from band 1 interferogram for the specified exposure is stored in the order of exposures, polarization, wave number, complex values. The order of polarization and complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	V/cm-1	-	
band2 (Band2 spectrum)										
lowWavelength	4	numPoints_SWIR, 2, 2020, 2	-	0	H5T_NATIVE_FLOAT	SWIR Spectral Data (Lower Frequencies) (SWIRスペクトルデータ (低周波成分))	Radiance spectrum data in lower frequencies before sensitivity correction transformed from band 2 interferogram for the specified exposure is stored in the order of exposures, polarization, wave number, complex values. The order of polarization and complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	V/cm-1	-	
obsWavelength	4	numPoints_SWIR, 2, 8080, 2	-	0	H5T_NATIVE_FLOAT	SWIR Spectral Data (Observation) (SWIRスペクトルデータ (観測成分))	Radiance spectrum data in observation frequencies before sensitivity correction transformed from band 2 interferogram for the specified exposure is stored in the order of exposures, polarization, wave number, complex values. The order of polarization and complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	V/cm-1	-	
band3 (Band3 spectrum)										
lowWavelength	4	numPoints_SWIR, 2, 2020, 2	-	0	H5T_NATIVE_FLOAT	SWIR Spectral Data (Lower Frequencies) (SWIRスペクトルデータ (低周波成分))	Radiance spectrum data in lower frequencies before sensitivity correction transformed from band 3 interferogram for the specified exposure is stored in the order of exposures, polarization, wave number, complex values. The order of polarization and complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	V/cm-1	-	
obsWavelength	4	numPoints_SWIR, 2, 6565, 2	-	0	H5T_NATIVE_FLOAT	SWIR Spectral Data (Observation) (SWIRスペクトルデータ (観測成分))	Radiance spectrum data in observation frequencies before sensitivity correction transformed from band 3 interferogram for the specified exposure is stored in the order of exposures, polarization, wave number, complex values. The order of polarization and complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	V/cm-1	-	
TIR (TIR spectrum)										
band4 (Band4 spectrum)										
lowWavelength	3	numPoints_TIR, 2020, 2	-	0	H5T_NATIVE_FLOAT	TIR Spectral Data (Lower Frequencies) (TIRスペクトルデータ (低周波成分))	Radiance spectrum data in lower frequencies before sensitivity correction transformed from band 4 interferogram for the specified exposure is stored in the order of exposures, wave number, complex values. The order of complex values is real part followed by imaginary part. This dataset is only for L1B product.	W/cm2/cm-1/str	-	
obsWavelength	3	numPoints_TIR, 7575, 2	-	0	H5T_NATIVE_FLOAT	TIR Spectral Data (Observation) (TIRスペクトルデータ (観測成分))	Radiance spectrum data in observation frequencies before sensitivity correction transformed from band 4 interferogram for the specified exposure is stored in the order of exposures, wave number, complex values. The order of complex values are P followed by S and real part followed by imaginary part. This dataset is only for L1B product.	W/cm2/cm-1/str	-

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
<input type="checkbox"/> ancillary (not completely corresponding to each)										
<input type="checkbox"/> FTSTimeEngConvCoef (Coefficients for FTS image engineering transformation)										
<input type="checkbox"/> SpacecraftTimeError (Spacecraft time error information)										
Time_System	1	4	-	0	H5T_NATIVE_CHAR	Time System (衛星時系)	"GPS": GPS based time "CDMS": CDMS internal clock time	-	-	
Num_TAI.UTC	1	1	-	0	H5T_NATIVE_INT	Number of TAI-UTC Records (TAI-UTCのレコード数)	Record number of TAI-UTC	-	-	
TAI.UTC_date	1	Num_TAI.UTC	-	0	USER_DATE_YMDHMS	TAI-UTC date (TAI-UTC日)	Transfer date and time of TAI-UTC (UTC)		-	
TAI.UTC	1	Num_TAI.UTC	-	0	H5T_NATIVE_INT	TAI-UTC (TAI-UTC)	Elapsed seconds from TAI.UTC_date	sec	-	
Num_Diff_Inf	1	1	-	0	H5T_NATIVE_INT	Number of Time Difference Records (時刻誤差情報レコード数)	(0 for GPS Time_System)  The following items are used for correlation between ground time and satellite time. The relation between these time system is expressed as below.  ground time = ground baseline time + satellite counter period * satellite center  satellite counter = (ground time - ground baseline time) in second + satellite time baseline counter	-	0	
Start_Time	1	Num_Diff_Inf	-	0	USER_DATE_YMDHMS	Start Time of Effective Period for Time Difference Record (TAI-UTC時刻誤差情報の有効開始期間)	(Not appear if number of time error information record is 0) Time of the first data used in calculation of the satellite counter period for the corresponding visible satellite path.	UTC	0	
End_Time	1	Num_Diff_Inf	-	0	USER_DATE_YMDHMS	Start Time of Effective Period for Time Difference Record (時刻誤差情報の有効終了期間)	(Not appear if number of time error information record is 0) Time of the last data used in calculation of the satellite counter period for the corresponding visible satellite path.	UTC	0	
Ground_Time	1	Num_Diff_Inf	-	0	USER_DATE_YMDHMS	Ground Reference Time (地上基準時刻)	(Not appear if number of time error information record is 0) Ground baseline time used in calculation of the satellite counter period for the corresponding visible satellite path.	UTC	0	
Ref_Count	1	Num_Diff_Inf	-	0	H5T_NATIVE_LONG	Satellite Time Reference Center (基準衛星時刻カウンタ)	(Not appear if number of time error information record is 0) Satellite baseline time used in calculation of the satellite counter period for the corresponding visible satellite path.	sec	0	
Period_Count	1	Num_Diff_Inf	-	0	H5T_NATIVE_DOUBLE	Satellite Counter Period (衛星カウンタ周期)	(Not appear if number of time error information record is 0) Time duration corresponding to 1 count during the effective	sec	0	

Table 3-2 Details of TANSO-FTS Product Format

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
TransformationInfo(座標変換情報)										
numData	1	1	-	0	H5T_NATIVE_LONG	Number of Sidereal Time Information (恒星時情報数)	Number of sidereal time information is stored.	-	-	プロダクト作成処理が、自前でファイルを読み、値を設定する。
SiderealTimeInfo(恒星時情報)										
t0	1	numData	-	0	USER_DATE_YMDHMS	t0 (t0)	Baseline time t <sub>0</sub> , θ <sub>g</sub> , and θ <sub>g_dot</sub> are elements of the matrix to convert coordinates from TOD to pseudo earth-fixed one. Using t <sub>0</sub> , θ <sub>g</sub> , and θ <sub>g_dot</sub> , Greenwich sidereal time θ is expressed as follows: $\theta = \theta_g + \theta_{g\_dot}(t - t_0)$ Using θ, transform matrix to convert TOD to pseudo earth-fixed coordinate is as follows: $U = \begin{pmatrix} \cos(-\theta) & -\sin(-\theta) & 0 \\ \sin(-\theta) & \cos(-\theta) & 0 \\ 0 & 0 & 1 \end{pmatrix}$ Thus, the relation between a position M <sub>TOD</sub> (in TOD) and the corresponding position M <sub>PECR</sub> (in pseudo earth-fixed coordinate) is as follows: $M_{PECR} = UM_{TOD}$	UTC	-	
thetaG	1	numData	-	0	H5T_NATIVE_DOUBLE	θ <sub>g</sub> (θ <sub>g</sub> )	Greenwich sidereal time at the baseline time	deg	-	
thetaGdot	1	numData	-	0	H5T_NATIVE_DOUBLE	θ <sub>g_dot</sub> (θ <sub>g_dot</sub> )	Deviation of Greenwich sidereal time	deg/sec	-	

Table 3-2 Details of TANSO-FTS Product Format

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
<input type="checkbox"/> MatrixInfo(行列情報)										
numMatrix	1	1	-	0	H5T_NATIVE_LONG	Coordinate Transformation Matrix (座標変換行列数)	Number of coordinate transformation matrix is stored.	-	-	
date	2	numData, numMatrix	-	0	USER_DATE_YMDHMS	Start Date and Time of Effective Period (UTC)	Start time of effective period (UTC) is stored.	UTC	-	
pnMatrix	3	numData, numMatrix, 9	-	0	H5T_NATIVE_DOUBLE	PN Matrix (PN行列)	The values are stored in the following order: (0, 1, 2) (3, 4, 5) (6, 7, 8).  PN matrix is one to convert ECI (J2000) to TOD correcting precession and nutation. Relation between a position $M_{ECI}$ in ECI (J2000) and the corresponding position $M_{TOD}$ in TOD is given as below: $M_{TOD} = PNM_{J2000}$	-	-	
xyMatrix	3	numData, numMatrix, 9	-	0	H5T_NATIVE_DOUBLE	XY Matrix (XY行列)	The values are stored in the following order: (0, 1, 2) (3, 4, 5) (6, 7, 8).  XY matrix is one to convert from TOD to ECR (ITRF97). Relation between a position $M_{ECR}$ in TOD and the corresponding position $M_{ECR}$ in ECR is given as below: $M_{ECR} = XYM_{PECR}$	-	-	

Table 3-2 Details of TANSO-FTS Product Format

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
OrbitData										
statusFlag	1	1	-	0	H5T_NATIVE_CHAR	Status Flag (ステータスフラグ)	"0x00": GPSR based orbit data "0x01": Onboard AOCs extrapolation orbit data "0x02": Ground based definitive orbit data "0x03": Ground based forecast orbit data	-	-	Orbit data timing is independent of that of FTS exposure, therefore orbit data are stored as a separate dataset.
startDate	1	1	-	0	USER_DATE_YMDHMS	Orbit Data Reference Time (軌道データ基準時刻)	Baseline start time for the elapsed time of orbit data (UTC)	datetime	-	Since the baseline time system of orbit data is TAI, the time is converted to UTC system.
numPoints	1	1	-	0	H5T_NATIVE_LONG	Number of Data (データ点数)	Number of orbit data	-	-	
time	1	numPoints	-	0	H5T_NATIVE_DOUBLE	Elapse Time from Reference Time (軌道データ時刻)	The elapsed seconds from the baseline time of orbit data	sec	-

NEB-080031

Group Path/Dataset Name	Database		Attribute		Data Type	Dataset Name (Japanese Name)	Explanation (Format)	Unit	Invalid Value	Notes
	Dimension	Size	Name	Number						
RadiometricCorrectionInfo										
fourierTransformationMethod	1	4096	-	0	H5T_NATIVE_CHAR	Fourier Transformation Method (フーリエ変換の方法)	"Fourier transformation method is FFTW which is free software developed at MIT." TBD: Additional information will be given specified in algorithm baseline document.	-	-	
SensorConstant										
opticalPathDifference_Nominal	1	2	-	0	H5T_NATIVE_FLOAT	Optical Path Difference (Nominal) (光路差(ノミナル))	Optical path difference (nominal value) is stored in the order of primary system and secondary system. "2.4995": (primary) "2.4994": (secondary) Fixed value	cm	-	
laserWavelength_Nominal	1	2	-	0	H5T_NATIVE_FLOAT	Laser Wave Length (Nominal) (レーザ波長(ノミナル))	Laser wave length (nominal value) is saved in the order of primary system and secondary system. "1309.742": (primary) "1309.688": (secondary) Fixed value	nm	-	
fringeCountNum_SWIR	1	1	-	0	H5T_NATIVE_LONG	Fringe Count Number (SWIR) (フリンジカウント数 (SWIR))	Number of fringe count (SWIR) is stored. fringeCountNum_SWIR "76336" Fixed value	-	-	
fringeCountNum_TIR	1	2	-	0	H5T_NATIVE_LONG	Fringe Count Number (TIR) (フリンジカウント数 (TIR))	Number of fringe count (TIR) is stored. fringeCountNum_TIR[a] "38206": a=0 (AC component) "38": a=1 (DC component) Fixed value	-	-	
EngValCoef (Engineering value conversion coefficients)										
a	2	3,8	-	0	H5T_NATIVE_DOUBLE	Standard Sensitivity (基準感度)	The baseline sensitivity for Band1P, 1S, 2P, 2S, 3P, 3S, 4AC, and 4DC are stored in this order following the order of gain H, M, and L.	1/V	-	
b	2	3,8	-	0	H5T_NATIVE_DOUBLE	Offset (オフセット)	The offset value for Band1P, 1S, 2P, 2S, 3P, 3S, 4AC, and 4DC are stored in this order following the order of gain H, M, and L.	-	-	
nonLinearCorrCoef(非線形補正係数)										
SWIR	1	4	-	0	H5T_NATIVE_DOUBLE	Non-Linear Correction Coefficients (SWIR) (非線形補正係数 (SWIR))	4 coefficients for non-linearity correction in SWIR are stored. Each element is for the cubic, quadratic, linear and constant components in this order. The same coefficients are used for all 6 devices.	-	-	
TIR	1	4	-	0	H5T_NATIVE_DOUBLE	Non-Linear Correction Coefficients (TIR) (非線形補正係数 (TIR))	4 coefficients for non-linearity correction in TIR are stored. Each element is for the cubic, quadratic, linear and constant components in this order.	-	-
