

# THE FEDERATION OF NETTLESTONE & NEWCHURCH PRIMARY SCHOOLS

## CALCULATION APPENDICES

Date Agreed: March 2014

Review Date: March 2015

Signed: \_\_\_\_\_

Chairman Board of Governors

The Federation of Nettlestone & Newchurch Primary Schools

## APPENDIX 1 - PROGRESSION OF WRITTEN CALCULATIONS (Method Examples)

### ADDITION

#### KEY STAGE ONE

The emphasis in Key Stage One will be on practical experiences and activities, which are important to develop the children's mathematical concepts.

#### Reception and Year 1

Children are encouraged to develop a mental picture of the number system in their heads to use for calculation. They develop ways of recording calculations using pictures, etc.

They use numberlines and practical resources to support calculation and teachers *demonstrate* the use of the numberline.

$$3 + 2 = 5$$

Children then begin to use numbered lines to support their own calculations using a numbered line to count on in ones.

$$8 + 5 = 13$$

Bead strings or bead bars can be used to illustrate addition including bridging through ten by counting on 2 then counting on 3.

## Year 2

Children will begin to use 'empty number lines' themselves starting with the larger number and counting on.

- ✓ First counting on in tens and ones.

$$34 + 23 = 57$$

- ✓ Then helping children to become more efficient by adding the units in one jump (by using the known fact  $4 + 3 = 7$ ).

$$34 + 23 = 57$$

- ✓ Followed by adding the tens in one jump and the units in one jump.

$$34 + 23 = 57$$

- ✓ Bridging through ten can help children become more efficient.

$$37 + 15 = 52$$

## KEY STAGE TWO

### Year 3

Children will continue to use empty number lines with increasingly large numbers, including compensation where appropriate.

- ✓ Count on from the largest number irrespective of the order of the calculation.

$$38 + 86 = 124$$

- ✓ Compensation

$$49 + 73 = 122$$

Children will begin to use informal pencil and paper methods (jottings) to support, record and explain partial mental methods building on existing mental strategies.

Children will learn to partition numbers, for example, into tens and units and add the most significant digits first.

E.g.

$$\begin{aligned} 57 + 22 &= (50 + 20) + (7 + 2) \\ &= 70 + 9 \\ &= 79 \end{aligned}$$

Children will then move onto the vertical method for addition adding the most significant digits first.

$$\begin{array}{r} 67 \\ + 24 \\ \hline 80 \text{ (60 + 20)} \\ \underline{11} \text{ (7 + 4)} \\ \hline 91 \end{array}$$

$$\begin{array}{r} 267 \\ + 85 \\ \hline 200 \\ 140 \text{ (60 + 80)} \\ \underline{12} \text{ (7 + 5)} \\ \hline 352 \end{array}$$

## Year 4

Children will move to adding the least significant digits first in preparation for 'carrying'.

$$\begin{array}{r} 67 \\ + 24 \\ \hline 11 \quad \text{Add mentally} \\ \hline 80 \\ \hline 91 \end{array}$$

The above would be used as an explanation to the children but they **would not** be expected to set it out like this in their books.

The children will begin to carry below the line and their work should look like this:

$$\begin{array}{r} 625 \\ +48 \\ \hline 673 \\ 1 \end{array} \qquad \begin{array}{r} 783 \\ +42 \\ \hline 825 \\ 1 \end{array} \qquad \begin{array}{r} 367 \\ +85 \\ \hline 452 \\ 1 \ 1 \end{array}$$

*Using similar methods, children will:*

- ✓ *add several numbers with different numbers of digits;*
- ✓ *begin to add two or more three-digit sums of money, with or without adjustment from the pence to the pounds;*
- ✓ *know that the decimal points should line up under each other, particularly when adding or subtracting mixed amounts, e.g. £3.59 + 78p.*

## Year 5

Adding the least significant digits first.

$$\begin{array}{r} 587 \\ + 475 \\ \hline 12 \ ) \\ 150 \ ) \text{ add mentally} \\ \hline 900 \ ) \\ 1062 \end{array} \qquad \begin{array}{r} 7587 \\ + 675 \\ \hline 12 \ ) \\ 150 \ ) \text{ add mentally} \\ \hline 1100 \ ) \\ 7000 \ ) \\ \hline 8262 \end{array}$$

The above would be used as an explanation to the children but they **would not** be expected to set it out like this in their books.

The children should extend the carrying method to numbers with at least four digits.

$$\begin{array}{r} 587 \\ + 475 \\ \hline 1062 \\ 11 \end{array}$$

$$\begin{array}{r} 3587 \\ + 675 \\ \hline 4262 \\ 111 \end{array}$$

*Using similar methods, children will:*

- ✓ *add several numbers with different numbers of digits;*
- ✓ *begin to add two or more decimal fractions with up to three digits and the same number of decimal places;*
- ✓ *know that decimal points should line up under each other, particularly when adding or subtracting mixed amounts, e.g. 3.2 m - 280 cm.*

## Year 6

Children should extend the carrying method to number with any number of digits.

$$\begin{array}{r} 7648 \\ + 1486 \\ \hline 9134 \\ 111 \end{array}$$

$$\begin{array}{r} 6584 \\ + 5848 \\ \hline 12432 \\ 111 \end{array}$$

$$\begin{array}{r} 42 \\ 6432 \\ 786 \\ 3 \\ + 4681 \\ \hline 11944 \\ 121 \end{array}$$

*Using similar methods, children will*

- ✓ *add several numbers with different numbers of digits;*
- ✓ *begin to add two or more decimal fractions with up to four digits and either one or two decimal places;*
- ✓ *know that decimal points should line up under each other, particularly when adding or subtracting mixed amounts, e.g. 401.2 + 26.85 + 0.71.*

# SUBTRACTION

## KEY STAGE ONE

The emphasis in Key Stage One will be on practical experiences and activities, which are important to develop the children's mathematical concepts.

### Reception and Year 1

Children are encouraged to develop a mental picture of the number system in their heads to use for calculation. They develop ways of recording calculations using pictures etc.

They use numberlines and practical resources to support calculation. Teachers *demonstrate* the use of the numberline.

$$6 - 3 = 3$$

The numberline should also be used to show that  $6 - 3$  means the 'difference between 6 and 3' or 'the difference between 3 and 6' and how many jumps they are apart.

Children then begin to use numbered lines to support their own calculations - using a numbered line to count back in ones.

$$13 - 5 = 8$$

Bead strings or bead bars can be used to illustrate subtraction including bridging through ten by counting back 3 then counting back 2.

$$13 - 5 = 8$$

## Year 2

Children will begin to use empty number lines to support calculations.

### Counting back

- ✓ First counting back in tens and ones.

$$47 - 23 = 24$$

- ✓ Then helping children to become more efficient by subtracting the units in one jump (by using the known fact  $7 - 3 = 4$ ).

$$47 - 23 = 24$$

✓ Subtracting the tens in one jump and the units in one jump.

$$47 - 23 = 24$$

✓ Bridging through ten can help children become more efficient.

$$42 - 25 = 17$$

### Counting on

If the numbers involved in the calculation are close together or near to multiples of 10, 100 etc, it can be more efficient to count on.

Count up from 47 to 82 in jumps of 10 and jumps of 1.

The number line should still show 0 so children can cross out the section from 0 to the smallest number. They then associate this method with 'taking away'.

$$82 - 47$$

Help children to become more efficient with counting on by:

- ✓ Subtracting the units in one jump;
- ✓ Subtracting the tens in one jump and the units in one jump;
- ✓ Bridging through ten.

## KEY STAGE TWO

### Year 3

Children will continue to use empty number lines with increasingly large numbers.

Children will begin to use informal pencil and paper methods (jottings) to support, record and explain partial mental methods building on existing mental strategies.

#### **Partitioning and decomposition**

This process should be demonstrated using arrow cards to show the partitioning and base 10 materials to show the decomposition of the number.

**NOTE** When solving the calculation  $89 - 57$ , children should know that 57 **does NOT EXIST AS AN AMOUNT** it is what you are subtracting from the other number. Therefore, when using base 10 materials, children would need to count out only the 89.

$$\begin{array}{r} 89 \\ - 57 \\ \hline \end{array} = \begin{array}{r} 80 \\ \underline{50} \\ 30 \end{array} \begin{array}{l} \rightarrow 9 \\ \rightarrow 7 \\ \rightarrow 2 \end{array} = 32$$

*Initially, the children will be taught using examples that do not need the children to exchange.*

**From this the children will begin to exchange.**

$$\begin{array}{r} 71 \\ - 46 \\ \hline \end{array} = \quad =$$

Step 1       $70 \rightarrow 1$

$$\begin{array}{r} \text{Step 2} \quad - \underline{40} \rightarrow 6 \\ \quad \quad \quad 60 \rightarrow 11 \\ \quad \quad \quad - \underline{40} \rightarrow 6 \\ \quad \quad \quad 20 + 5 = 25 \end{array}$$

The calculation should be read as e.g. take 6 from 1.

This would be recorded by the children as

$$\begin{array}{r} \quad \quad \quad \overset{60}{\cancel{70}} \quad \quad 11 \\ \quad \quad \quad - \underline{40} \rightarrow 6 \\ \quad \quad \quad 20 \rightarrow 5 = 25 \end{array}$$

*Children should know that units line up under units, tens under tens, and so on.*

## Year 4

Decomposition

$$\begin{array}{r} 755 \\ - \underline{86} \end{array} = \begin{array}{r} 700 \quad 50 \quad 5 \\ \quad \quad \quad \underline{80 \quad 6} \end{array}$$

$$= \begin{array}{r} 700 \quad 40 \quad 15 \\ - \quad \quad \underline{80 \quad 6} \end{array}$$

$$= \begin{array}{r} 600 \quad 140 \quad 15 \\ - \quad \quad \underline{80 \quad 6} \end{array}$$

$$600 \quad 60 \quad 9 = 669$$

The above would be used as an explanation to the children but they **would not** be expected to set it out like this in their books.

Children should set it out like this:

$$\begin{array}{r} \quad \quad \quad 614 \quad 1 \\ \quad \quad \quad \cancel{7} \cancel{5} 4 \\ - \quad \quad \underline{86} \\ \quad \quad \quad 668 \end{array}$$

Extend to decimals.

Begin to find the difference between two three-digit sums of money, with or without "adjustment" from the pence to the pounds. Know that decimal points should line up under each other.

$$£8.95 - £4.38$$

### Year 5

Decomposition

$$\begin{array}{r}
 1755 \\
 - 286 \\
 \hline
 \end{array}
 =
 \begin{array}{r}
 1000 \quad 700 \quad 50 \quad 5 \\
 \quad \quad 200 \quad 80 \quad 6 \\
 \hline
 1000 \quad 700 \quad 40 \quad 15 \\
 \quad \quad 200 \quad 80 \quad 6 \\
 \hline
 1000 \quad 600 \quad 140 \quad 15 \\
 \quad \quad 200 \quad 80 \quad 6 \\
 \hline
 1000 \quad 400 \quad 60 \quad 8
 \end{array}$$

The above would be used as an explanation to the children but they **would not** be expected to set it out like this in their books.

They should set it out like this:

$$\begin{array}{r}
 \phantom{1}6141 \\
 1\cancel{7}54 \\
 - 286 \\
 \hline
 1468
 \end{array}$$

Extend to decimals.

Find the difference between two decimal fractions with up to three digits and the same number of decimal places. Know that decimal points should line up under each other.

$$\begin{array}{r}
 19.42 \\
 -6.78 \\
 \hline
 \end{array}$$

### Year 6

Decomposition

$$\begin{array}{r}
 \overset{5}{\cancel{6}}\overset{13}{4}\overset{1}{6}7 \\
 - 2684 \\
 \hline
 3783
 \end{array}$$

Extend to decimals.

Subtract two or more decimal fractions with up to three digits and either one or two decimal places. Know that decimal points should line up under each other.

$$\begin{array}{r}
 324.90 \\
 - 7.25 \\
 \hline
 \end{array}$$

## MULTIPLICATION

### KEY STAGE ONE

The emphasis in Key Stage One will be on practical experiences and activities, which are important to develop the children's mathematical concepts.

#### Reception

Children will understand equal groups and share items out in play and problem solving.

#### Year 1

Children will understand equal groups and share items out in play and problem solving.

They will count in 2s and 10s and later in 5s.

## Year 2

Children will develop their understanding of multiplication and use jottings to support calculation:

### ✓ Repeated addition

3 times 5 is  $5 + 5 + 5 = 15$  or 3 lots of 5 or  $5 \times 3$

Repeated addition can be shown easily on a number line:

$$5 \times 3 = 5 + 5 + 5$$

and on a bead bar:

$$5 \times 3 = 5 + 5 + 5$$

### ✓ Commutativity

Children should know that  $3 \times 5$  has the same answer as  $5 \times 3$ . This can also be shown on the number line.

✓ **Arrays**

Children should be able to model a multiplication calculation using an array. This knowledge will support with the development of the grid method.

## KEY STAGE TWO

### Year 3

Children in Year 3 continue to work mentally and informally on multiplication.

Children will continue to use:

✓ **Repeated addition**

4 times 6 is  $6 + 6 + 6 + 6 = 24$  or 4 lots of 6 or  $6 \times 4$

Children should use number lines or bead bars to support their understanding.

### Arrays

Children should be able to model a multiplication calculation using an array. This knowledge will support with the development of the grid method.

$$9 \times 4 = 36$$

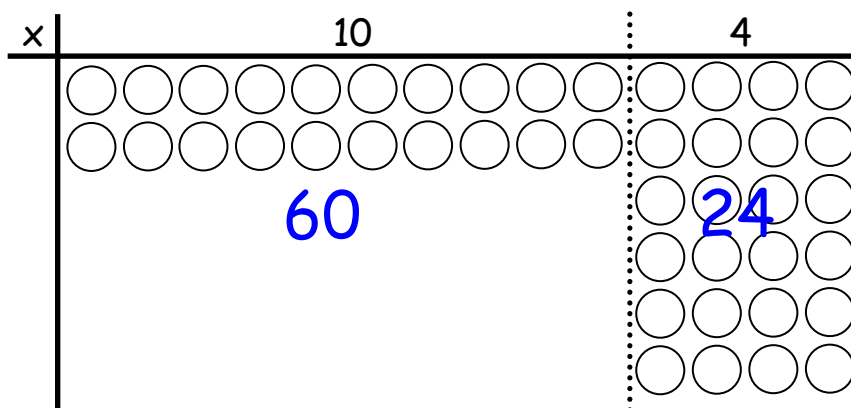

$$9 \times 4 = 36$$

### Partitioning

$$\begin{aligned} 38 \times 5 &= (30 \times 5) + (8 \times 5) \\ &= 150 + 40 \\ &= 190 \end{aligned}$$

### Year 4

Children will continue to use arrays where appropriate leading into the grid method of multiplication.

$$(6 \times 10) + (6 \times 4)$$

$$60 + 24$$

84

### Grid method

#### TU × U

(Short multiplication - multiplication by a single digit)

$$23 \times 8$$

Children will approximate first

$23 \times 8$  is approximately  $25 \times 8 = 200$

x	20	3	
	160	24	
8			160
			+ 24
			184

### Lattice method

(Short multiplication - multiplication by a single digit)

$$42 \times 35 = 1470$$

### Year 5

In Year 5 the compact method for multiplication will be introduced to the children, which builds on their knowledge of the grid and lattice method.

Short Multiplication (HTU × U)

$$\begin{array}{r}
 346 \\
 \times \quad \underline{9} \\
 54 \quad (6 \times 9) \\
 360 \quad (40 \times 9) \\
 \underline{2700} \quad (300 \times 9) \\
 3114
 \end{array}$$

The above would be used as an explanation to the children.  
The children would be expected to set it out as below:

$$\begin{array}{r}
 346 \\
 \times \quad \underline{9} \\
 \underline{3114} \\
 \quad \quad \quad \begin{array}{l} 4 \quad 5 \end{array}
 \end{array}$$

Long Multiplication (TU  $\times$  TU)

The children would be expected to set it out as follows:

$$\begin{array}{r}
 46 \\
 \times \underline{28} \\
 368 \\
 \quad \quad \quad 4 \\
 920 \\
 \quad \quad \quad \quad \quad 1 \\
 \hline
 1288
 \end{array}$$

1

**Extend to decimals.**

Multiply by a single digit, approximating first. Know that decimal points should line up under each other.

$$\begin{array}{r}
 4.9 \times 3 \qquad 4.9 \\
 \qquad \qquad \times \quad \underline{3} \\
 \qquad \qquad \underline{14.7} \\
 \qquad \qquad \quad \quad \quad 2
 \end{array}$$

**Year 6**

Long multiplication (HTU  $\times$  TU)

$$\begin{array}{r}
 336 \\
 \times \quad \underline{29} \\
 \hline
 3024
 \end{array}$$

$$\begin{array}{r}
 \phantom{0}^3 \phantom{0}^5 \\
 6720 \\
 \underline{\phantom{0}^1} \\
 9744
 \end{array}$$

Extend to decimals.

Multiply by a single digit, approximating first. Know that decimal points should line up under each other.

$$\begin{array}{r}
 3.62 \\
 \times \phantom{0}^1 3 \\
 \hline
 10.86 \\
 \phantom{0}^1
 \end{array}$$

## DIVISION

### KEY STAGE ONE

The emphasis in Key Stage One will be on practical experiences and activities, which are important to develop the children's mathematical concepts.

#### Reception

Children will understand equal groups and share items out in play and problem solving.

#### Year 1

Children will understand equal groups and share items out in play and problem solving.

They will count in 2s and 10s and later in 5s.

**Year 2**

Children will develop their understanding of division and use jottings to support calculation

✓ **Sharing equally**

6 sweets shared between 2 people, how many do they each get?

✓ **Grouping or repeated subtraction**

There are 6 sweets, how many people can have 2 sweets each?

✓ **Repeated subtraction using a number line or bead bar**

$$12 \div 3 = 4$$

The bead bar will help children with interpreting division calculations such as  $10 \div 5$  as 'how many 5s make 10?'

- ✓ **Using symbols to stand for unknown numbers to complete equations using inverse operations**

$$\square \div 2 = 4$$

$$20 \div \triangle = 4$$

$$\square \div \triangle = 4$$

## **KEY STAGE TWO**

Children must be secure in both their tables and in multiplication methods before they can cope with division.

### **Year 3**

Ensure that the emphasis in Y3 is on grouping rather than sharing.

Children will continue to use:

- ✓ **Repeated subtraction using a number line**

Children will use an empty number line to support their calculation.

$$24 \div 4 = 6$$

Children should also move onto calculations involving remainders.

$$13 \div 4 = 3 \text{ r } 1$$

**Understand that division is the inverse of multiplication and that division facts can be derived from multiplication sums.**

Using symbols to stand for unknown numbers to complete equations using inverse operations

$$26 \div 2 = \square$$

$$24 \div \triangle = 12$$

$$\square \div 10 = 8$$

### Year 4

Short division (TU  $\div$  U)

$$96 \div 6$$

$$\begin{array}{r} 16 \\ 6 \overline{) 96} \\ \underline{- 60} \quad (10 \times 6) \\ 36 \\ \underline{- 36} \quad (6 \times 6) \\ 0 \end{array}$$

### Year 5

Short division (HTU  $\div$  U)

$$196 \div 6$$

$$\begin{array}{r} 32 \text{ r } 4 \\ 6 \overline{) 196} \\ \underline{- 180} \quad (30 \times 6) \\ 16 \\ \underline{- 12} \quad (2 \times 6) \\ 4 \end{array}$$

### Year 6

Continue to work on short division - see Year 5.

Long division (HTU  $\div$  TU)

$$972 \div 36$$

$$\begin{array}{r} 27 \\ 36 \overline{) 972} \\ \underline{- 720} \quad (20 \times 36) \\ 252 \\ \underline{- 252} \quad (7 \times 36) \\ 0 \end{array}$$

Extend to decimals with up to two decimal places.

Children need only be able to do simple division with decimals and they should work most out mentally, only using repeated subtraction when necessary.

$$87.5 \div 7$$

$$\begin{array}{r} 12.5 \\ 7 \overline{) 87.5} \\ \underline{- 70} \quad (10 \times 7) \\ 17.5 \\ \underline{- 14} \quad (2 \times 7) \\ 3.5 \\ \underline{- 3.5} \quad (0.5 \times 7) \\ 0.0 \end{array}$$
