Per: Date:

Name:

The table below shows the electronegativity values for most elements in the periodic table. Determine if the bonds in the compounds below are **ionic**, **polar** or **nonpolar** based on the electronegativity differences.

Pauling's Electronegativity Scale:

| Н | | | | | | | | | | | | | | | | | He |
|-----|-----|-------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|----|
| 2.1 | | | | | | | | | | | | | | | | | - |

According to Brown, Lemay and Bursten, page 313, if the difference in electronegativities of the two atoms in a bond is *less than 0.5*, the bond is considered **nonpolar**. If the difference *is greater than or equal to 0.5* and less than 2.0 it is considered **polar**. If the difference is *greater than or equal to 2.0*, it is considered **ionic**. (NOTE: In other reference materials the rule of a difference 1.7 to characterize bonds as ionic or covalent)

| 1. | BCl ₃ | 8. | NH ₃ |
|----|--------------------|-----|-------------------|
| 2. | OF ₂ | 9. | CIF ₃ |
