NICOLA'S FOUNDATION

The institutional aims of the Foundation are:

- to promote research and education for a health care system centred around the person and there fore more humane
- spread the scientific culture, in particular for prevention and regenerative medicine and surgery
- develop basic and applied research projects, from stem cells to biotechnologies, involving young Italian researchers, in turn avoiding the "brain drain"
- contribute to education and scientific development in the biomedical field, also in favor of developing countries, with scholarships
- support medical and scientific education by involving Universities, authorities, welfare centers and institutions in order to contribute to the development of the "Italian System"
- promote scientific support and health campaigns.

The Mission

The Foundation's Mission, non-profit and in respect of the ethical, moral and cultural principles dictated by the founders can be summarized as follows:

- promote the organization of conferences in order to disseminate the scientific results attained both by their own researchers and by international research centres and universities in general
- to promote studies and research in medicine with particular attention to the fields of orthopaedics, biologic-bio mechanics, genetics and tissue engineering as well as bioengineering, biomechanics and oncology
- to promote meetings and create collaborations and interaction with the institutions, universities, public and private study centres, including specific projects of support and economic aid
- to promote socially supportive activities through specific projects for support and economic aid in favour of the disadvantaged or institutions or religious congregations which operate in the field of solidarity and humanitarian aid
- to promote the study of methods and systems to develop and improve both the surgical and diagnostic procedures of diseases by means of stem cell transplantation as well as by using other experimental techniques
- to promote initiatives for scientific propaganda both in the schools and national and international university settings besides permanent education and up dates for health personnel
- to develop and organize centres, at a national and international level for E.B.M. (Evidence Based Medicine)
- to develop and organize centres, nation- and worldwide for the development of experimental surgery and novel techniques.
