Shaping Inspirational Art & 3D form

Take part in a creative and practical workshop designed for Art subject leaders, teachers and teaching assistants of primary and special schools to develop practical skills in sculpture and 3D form.

Inspired by the work of artists, you will learn how to:

- Break the visual elements of art in to practical steps.
- Link the visual elements with artists and art processes
- Develop the use of a sketch book as a source of visual information for children to use for their own creative projects.
- Develop simple, but effective sculpture techniques to use across a whole school, to use as a starting point to develop long term plans showing progression across all year groups.
- Use the visual elements of line, texture, shape and form for the teaching of sculpture.
- Use the work of sculptors as a starting point for art projects.
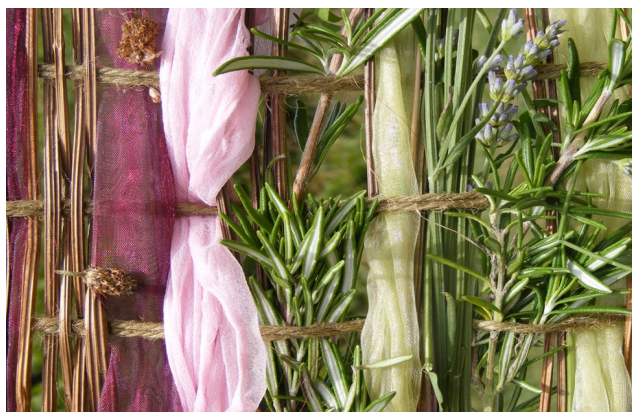

You will be given the opportunity to observe children working on a sculpture project and to develop your own practical skills by creating a piece of sculpture. There will also be an opportunity to develop a set of long term plans for sculpture that you can use at your school to show progression across all ages.

The project will help pupils' to develop the following:

- Explore ideas creatively
- Use a sketchbook as a source of visual information
- Use an artist's work as a starting point for their own work
- An understanding of the visual elements of shape and form
- Combining drawing skills with 3D form

> **"Great knowledge of different artists and how these can inspire children and projects." (Course delegate 2015)**

Venue: The Mead Community Primary School, Hilperton, Trowbridge, Wilts, BA14 7GN
