

Turkish Plastics Industry Foundation

Dear Colleagues,

PAGEV has been organizing an international congress for nine years, which brings together plastics industry members all over the world. **2nd International Plastic Packaging Technologies Congress** will take place on **21st October of 2015** in **Hilton Istanbul Bomonti Hotel**.

Our congress focuses on Plastic Packaging as the most preferred section by the packaging industry. As you may know, plastics with its nearly 40 percent share in the packaging industry makes one third of the packaging materials. The use of plastics –used in the entire world as alternative for the materials such as paper, steel, aluminum, wood, and glass with the effect of economic development, ease of use, energy saving and environmental factors- in packaging industry increases every day. Without plastics, the average weight of the packages will increase to 4-times of the existing weight, the energy used for packaging production will increase to 2-times of the existing energy use, and the volume of the packages will increase two and one half times of the existing volume.

Based on these facts, our congress shall provide a unique platform for exchange of ideas for the leading experts, academicians, business leaders and investors of the packaging and plastic sectors. We are proud to invite you to attend our Congress, during which speakers and experts of the renowned companies from all over the world will share their knowledge.

Best Regards,

Ahmet MERIC

1st Vice President of PAGEV / Congress Chairman

Call For Papers

Papers are invited on all aspects of including (but not exclusively):

- Circular Economy and Plastic Packaging
- Examples of successful packaging
- Visual packaging design
- Functional designs
- Innovative ice cream packaging
- Innovative beverage packaging
- Innovative food packaging
- Innovative packaging for detergents
- Packaging in cosmetics
- An approach to risk assessment for food contact materials
- Innovative food packaging solutions
- New robotic technologies in packaging
- Recent process and products in food packaging, new strategies
- Smart packaging
- Innovative technological developments (Raw materials, machinery and auxiliary equipments)
- Rigid and flexible packaging and global trends
- New technologies in flexible packaging
- New developments in plastic closures
- Barrier materials and shelf life stability
- Retort and aseptic packaging
- Uses of new packaging films

Turkish Plastics Industry Foundation

- Multilayer coextrusion
- Plastic composites
- Global trends in film production machinery
- Enhancing shelf-life of packaging
- Minimising migration in food
- Food safety and traceability technologies and food inspection system
- Innovations in laminating adhesive technologies in respect of food packaging safety
- LCA and Carbon footprint
- Packaging as a waste preventer
- Regulations, testing, standards and quality control
- Packaging sustainability in the context of the food value chain
- Investment potential for the food packaging industry in developing countries
- Selection principles of plastic packaging materials
- The safety and traceability of plastic packaging in the pharmaceutical industry
- Plastic packaging materials and new trends in the green
- New developments in plastic packaging materials (high-barrier polyester materials, sterile plastic packaging materials, , nano - plastic packaging materials)
- Recyclable plastic packaging materials and technologies
- Green biodegradable packaging materials
