The units being offered for public subscription have not been approved or disapproved by SEBI, nor has SEBI certified the accuracy or adequacy of this KIM.

Investment Objective:

Each Plan under the Scheme will endeavour to generate income through investments in Debt and Money Market Instruments. In accordance with SEBI Circular No SEBI/IMD/CIR No. 12/147132/08 dated December 11, 2008 each Plan shall invest only in such securities which mature on or before the maturity date of the respective plan.

Asset Allocation Pattern:

Under normal circumstances the asset allocation pattern for each of the 8 Plans will be

| Maturity of the Plan | Instrument | Minimum | Maximum |
|---|--|---------|---------|
| Up to and | Money Market instruments | 0% | 100% |
| including 400 days | Debt instruments (including government securities, floating rate debt instruments and securitized debt*) | 0% | 100% |

| Above 3 years | Money Market instruments | 0% | 20% |
| and Up to and including 10 Years | (including government securities, floating rate debt instruments and securitized debt*) | 80% | 100% |

Asset allocation of each plan under the scheme would be chosen according to the maturity profile of each plan as mentioned above in the table.

*Investment in Securitized Debt not to exceed 50% of the net assets of the Scheme. Investment in Derivatives will be up to 50% of the net assets of the Scheme. Investment in derivatives shall be for hedging, portfolio balancing and such other purposes as

maybe permitted from time to time. The cumulative gross exposure through money market instruments, debt instruments ((including government securities, floating rate debt instruments and securitized debt*) and derivative positions should not exceed 100% of the net assets of the scheme.

All investments in derivative instruments shall be subject to the limits mentioned in SEBI circular ref. Cir/ IMD/ DF/ 11/ 2010 dated August 18, 2010.

The Scheme does not propose to invest in ADRs/GDRs and foreign securities. The Scheme intends to restrict repo and reverse repo in central government securities, state government securities and T-bills only. The scheme does not intend to enter into repo/reverse repo in corporate debt securities.

Pending deployment of funds as per the investment objective of the Scheme, the funds may be parked in short term deposits of the scheduled Commercial Banks, subject to guidelines and limits specified by SEBI from time to time.

Subject to the Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the AMC, the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the asset allocation pattern will be for short term and defensive considerations.

In the event of asset allocation falling outside the limits specified in the asset allocation table, the fund manager will review and rebalance the same as follows:

- Within 5 days (for schemes having tenor of 30 days or more but up to 3 months)
- Within 15 days (for schemes having tenor of more than 3 months but up to 6 months)

Specific disclosures for close-ended debt oriented schemes

i. Credit evaluation policy for investment in debt securities

The in-house credit evaluation policy to evaluate the credit quality of an issuer follows the 'bottom-up' procedure outlined below -

The credit analyst carries out an in-depth analysis of the financial statements (annual reports and quarterly earnings statements) of the issuer, for the last 2-3 years evaluating amongst other metrics, relevant ratios of profitability, capital adequacy, gearing, turnover, and liquidity/asset-liability management. Qualitative factors like management track record, group companies, resourceraising ability, extent of availability of banking lines, internal control systems, etc are evaluated in addition to the business model and industry within which the issuer operates as regards industry/model-specific risks, working capital requirements, cash generation, seasonality, regulatory environment, competition, bargaining power, etc. The analyst also reviews secondary sources like rating rationales/ perspectives of credit rating agencies, research reports of broking firms while also relying on primary sources such analyst conference calls with company management and direct interaction with the management on need based specific clarifications. On an ongoing basis, the credit analyst keeps track of credit profile of the issuer, possible credit risks reflected in change in outlook of rating agencies, external developments affecting the issuer etc. Investments in issuers will be subject to ceiling limits (for long-term and shortterm separately) based on net worth and rated quantum by rating agencies. All the credit analysis/ opinions are formally documented in a pre-defined format and preserved for future reference.

Sector wise exposure limit: The scheme would not invest more than 30% of net assets of the scheme in a particular sector (excluding investments in Bank CDs, CBLO, G-Secs, T-Bills and AAA rated securities issued by Public Financial Institutions and Public Sector Banks). For the purpose of identifying sector, we would use AMFI sector definitions.

Provided that the scheme may take an additional exposure to financial services sector (over and above the limit of 30% mentioned above) not exceeding 10% of the net assets of the scheme by way of increase in exposure to Housing Finance Companies (HFCs) only;

Provided further that the additional exposure to such securities issued by HFCs are rated AA and above and these HFCs are registered with National Housing Bank (NHB) and the total investment/ exposure in HFCs shall not exceed 30% of the net assets of the scheme

No investment proposed below A3 rating.

The above table reflects the intended allocation against each sub asset class/credit rating and there will not be any variations between the allocation indicated above and the final portfolio except in the following instances.

- In case of non availability of and taking in to account the risk reward analysis
 of CPs, NCDs including Securitized Debts, the scheme may invest in CDs with
 highest credit rating (A1+) and CBLO/T-Bills/ G-Sec. Such deviation may exist till
 suitable NCD/CP/securitized debt of desired credit quality is available.
- Positive variation in investment towards higher credit rating in the same instrument may be allowed. In view of the same, the fund manager will have the option to replace a AA rated instrument of CPs/ CDs/ NCDs/ SDs etc with a AAA rated instrument of the respective CPs/ CDs/ NCDs/ SDs etc.
- 3) The Modifiers {"+" (plus) / "-"(minus)} used with the rating symbols for the categories AA to C will reflect the comparative standing within the category and intended allocation mentioned against a rating will include its modifiers also.
- 4) At the time of building up the portfolio post NFO as per the investment objective of the scheme and also towards the maturity of the scheme there may be a higher allocation to cash and cash equivalent.

In the event of asset allocation falling outside the limits specified in the asset allocation table, the fund manager will review and rebalance the same as follows:

Within 5 days (for schemes having tenor of 30 days or more but up to 3 months)

Within 15 days (for schemes having tenor of more than 3 months but up to 6 months) Within 30 days (for schemes having tenor above 6 months)

There is no rebalancing period for schemes having maturity of less than 30 days.

Investment in IDBI Liquid Fund

At the time of building up the portfolio post NFO as per the investment objective of the scheme and also towards the maturity of the scheme there may be a higher allocation to cash and cash equivalent. The scheme may deploy such cash in IDBI Liquid Fund at the prevailing NAV. The aggregate inter-scheme investment made by all schemes under the same management or in schemes under the management of any other asset management company shall not exceed 5% of the net asset value of the mutual fund (excluding FOF schemes). No asset management fees will be charged on investments made in IDBI Liquid Fund or other schemes by IDBI FMP Series IV and its sub plans.

Investment in IDBI Liquid Fund is envisaged to make up for maturity mismatch between the Plan's tenor and the maturity of the underlying portfolio. For e.g. a 370 day fund investing exclusively in money market instruments may need to invest in IDBI Liquid Fund for 5 days (either immediately after allotment/closer to maturity) since maturity of money market instruments do not exceed 365 days. Under no circumstance, will the maturity of the instruments in the Plan's portfolio exceed that of the maturity of the Plan.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

- The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the Scheme Information Document & Statement of Additional Information.
- 2. All Plans launched under IDBI Fixed Maturity Plan Series IV will seek to invest

in credit instruments, Government Securities, securitized debt, debt derivatives and money market instruments. Trading volumes and settlement periods may inherently restrict the liquidity of the scheme's investments which may impact the Scheme's ability to capitalize on investment opportunities resulting in lower than anticipated performance for the Scheme.

- 3. Different types of securities in which the Scheme/Plans would invest as given in the SID carry different levels of risk. Accordingly the Scheme's/Plan's risk may increase or decrease depending upon the investment pattern. For e.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risk than bonds, which are AA rated.
- 4. The Mutual Fund is not assuring any dividend nor is it assuring that it will make any dividend distributions. All dividend distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme and will be at the discretion of the AMC.
- 5. Since the scheme is a close ended scheme, investors will have to necessarily trade in the stock Exchange platform, in case they wish to liquidate their units before maturity date of the respective maturity plans. Transactions in close ended units of mutual funds in the stock Exchange platform are subject to illiquidity risk.
- Risks associated with investments in debt and money market securities (including government securities, and floating/fixed rate debt instruments)
 - Credit risk: This risk arises due to any uncertainty in counterparty's ability
 or willingness to meet its contractual obligations. This risk pertains to the
 risk of default of payment of principal and interest. Government Securities
 have zero credit risk while other debt instruments are rated according to
 the issuer's ability to meet the obligations.

The AMC seeks to manage credit risk by restricting investments only to investment grade securities. Regular review of the issuer profile to monitor and evaluate the credit quality of the issuer will be carried out.

ii. Interest Rate risk: This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The values of investments will appreciate/depreciate if the interest rates fall/rise. In the Scheme securities invested in will mature on or before maturity of the scheme. As the securities are expected to be held till maturity, the interest rate risk is mitigated.

Interest rate risk mitigation will be through active duration management at the portfolio level through regular monitoring of the interest rate environment in the economy.

iii. Liquidity risk: The liquidity of a bond may change depending on market conditions. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio.

Since no intermediate repurchases are permitted during the tenor of the Scheme but only at maturity and since the maturity of the instruments in the underlying portfolio cannot exceed the maturity date of the Scheme, liquidity risk is not likely to impact the Scheme.

iv. Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.

The AMC will endeavor to manage this risk by diversifying the investments in instruments with appropriate maturity baskets.

7. Risks associated with Investing in Derivatives

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

There are certain risks inherent in derivatives. These are

- Price Risk: Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
- Default Risk: This is the risk that losses will be incurred due to default by counter party.
- iii. Basis Risk This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged. for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset
- Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.

 Liquidity risk pertains to how saleable a security is in the market. All securities/instruments irrespective of whether they are equity, bonds or derivates may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

The AMC will monitor the overall economic and credit environment including the systemic liquidity on a regular basis and the outlook will be integrated into the risk control and monitoring of the Scheme to control the risk emanating from derivative investments.

$8. \hspace{0.5in} \textbf{Risks associated with investing in Securitized Debt} \\$

Securitized Debt is a financial instrument (bond) whose interest and principal payments are backed by an underlying cash flow from another asset. The risks associated with investing in such instruments are:

Limited Recourse: The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.

Delinquency and Credit Risk: Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly Investor Payouts to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle/ Asset. However many factors may affect, delay or prevent the repossession of such Vehicle/Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle/Asset may be sold may be lower than the amount due from that Obligor.

Risks due to possible prepayments: Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.

Bankruptcy of the Originator or Seller: If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

Liquidity risk: There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.

Risk mitigating mechanisms for securitized debts are explained in detail in the later pages of this document.

Risks associated with Short Selling and Securities Lending

The scheme does not propose to engage in Short Selling and Securities Lending

10. Risks associated with investing in unrated securities

Investing in unrated securities will be riskier compared to investment in rated instruments due to non availability of third party assessment on the repaying capability of the issuer. Any investment in unrated securities will be carried out only after obtaining the general approval from Board of Trustees and Board of AMC. The Mutual Fund will carry out internal rating exercise for all unrated instruments in which the Fund Manger plans to make investments and assign a proxy rating. Investments in unrated instruments will only be made in instruments with proxy rating of A1/AA- or above.
