**Credit Evaluation Policy for investment in debt securities:**

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks so the investment process is firmly research oriented. It comprises qualitative as well as quantitative measures. Qualitative factors like management track record, group companies, resource-raising ability, extent of availability of banking lines, internal control systems, etc are evaluated in addition to the business model and industry within which the issuer operates as regards industry/model-specific risks working capital requirements, cash generation, seasonality, regulatory environment, competition, bargaining power, etc. Quantitative factors like debt to equity ratio, Profit and loss statement analysis, balance sheet analysis are taken into consideration.

Macroeconomic call is taken on interest rate direction by careful analysis of various influencing factors like Inflation, Money supply, Private sector borrowing, Government borrowing, Currency market movement, Central Bank policy, Local fiscal and monetary policy, Global interest rate scenario and Market sentiment. Interest rate direction call is supplemented by technical analysis of market and short term influencing factors like trader position, auction/issuance of securities, release of economic numbers, offshore market position, etc. Interest Rate direction call and anticipation of yield curve movement forms the basis of portfolio positioning in duration and spread terms. Credit research is done on a regular basis for corporate having high investment grade rating. Credit research includes internal analysis of rating rationale, and financial statements (annual reports and quarterly earnings statements) of the issuer, for the last 1-3 years evaluating amongst other metrics, relevant ratios of profitability, capital adequacy, gearing, turnover and other inputs from external agencies. On an ongoing basis, the credit analyst keeps track of credit profile of the issuer, possible credit risks reflected in change in outlook of rating agencies, external developments affecting the issuer etc. Internal credit call is a prerequisite for all investments since the investment universe is primarily high-grade credit instruments. Credit research is also used to minimize credit migration risk and for generating relative value trade ideas. Stable to higher rating on maturity vis-à-vis issuance is the guiding factor for investment decisions from credit point of view.

**INVESTMENT STRATEGY:**

**For Debt Investments:** As the Scheme is close ended, the Scheme will invest in a basket of permissible securities maturing on or before maturity of the Scheme. The Scheme will invest in securities with a view to hold them till the maturity of the Scheme. To that effect the Scheme will follow a buy and hold strategy to investment. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will be guided by the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of Rating Agencies

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

**For Equity Investments:** For the equity portion of the corpus, the AMC intends to invest in stocks, which will be bought, keeping in mind the time horizon of the plan. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the Fund Management team at the AMC. The AMC will also monitor and control maximum exposure to any one stock or one sector.

Depending on overall portfolio considerations and depending on market conditions, the fund manager may also have allocations to equity derivatives. The derivative portfolio will comprise of futures and options on the Nifty Index and will be actively managed by the fund manager within the overall asset allocation of the fund. The allocation to equity derivatives along with cash equity will be within the overall equity allocation as per the asset allocation of the scheme

**RISK PROFILE OF THE SCHEME:**

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme Specific Risk Factors summarised below.

**Scheme Specific Risk Factors and Risk Management Strategies:** Investments in the scheme may be affected by trading volumes, settlement periods, fluctuations in interest rates, liquidity risk, credit risk, reinvestment risk, settlement risk, regulatory risk, counter party risk and securitized debt.

**Risk management strategies:** The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in debt and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risk & Description specific to Debt	Risk Mitigants/Management Strategy
<b>Market Risk:</b> As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	The fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.

<b>Liquidity or Marketability Risk:</b> This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.	The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.  Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.
<b>Credit Risk:</b> Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.	A traditional SWOT analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower.  In case of securitized debt instruments, the fund will ensure that these instruments are sufficiently backed by assets.
<b>Reinvestment Risk:</b> This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
<b>Derivatives Risk:</b> As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.	The fund has provision for using derivative instruments for portfolio balancing and hedging purposes. Interest Rate Swaps will be done with approved counter parties under pre approved ISDA agreements. Mark to Market of swaps, netting off of cash flow and default provision clauses will be provided as per international best practice on a reciprocal basis. Interest rate swaps and other derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines.

Risk & Description specific to Equity Investments	Risk Mitigants/Management Strategy
<b>Market Risk:</b> The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.	Market risk is a risk which is inherent to an equity scheme. The scheme may use derivatives to limit this risk.
<b>Liquidity Risk:</b> The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.	The fund will be a high risk, high return fund and the time horizon, until the market realizes the true value of the stocks that the fund has invested into, could be longer. As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.
