

# Back Up

Topic: Transverse and longitudinal waves  
(middle school physics)

by Lodge

## Back Up

Make the disturbance it takes  
With sound and ocean waves  
To move this energy from here - to a brand new place  
It's a mechanical day  
When a medium is necessary  
While the energy through a vacuum explains  
Electromagnetic rays

Transverse me all with perpendicular motion  
A rope so up and down just like the surface of the ocean  
When a sound goes off it creates some longitudinal waves  
Bounce off and back up back up back up  
Bounce off and back up

Now at the top of the crest  
We look around so impressed  
But down deep in the trough  
We get a little distressed  
Where amplitude is ok  
It's just a shallow wave  
A short distance or length to the next sunny day  
Well hey this frequency is insane  
23 million passed today!

Can you dig the wave that reflects after striking a barrier?  
Like water hitting a bridge, or when sound hits a wall  
Maybe diffract a little, spread out a little,  
When you hit the edge of the obstacle  
Its like a carnival, of intervals.

When light goes into my glass  
It tends to bend and refract  
Travels at different speeds  
Depending where it's at  
Though waves will join & combine  
Your crest is similar to mine  
Constructive interference - positive right?  
Amplitude is so gonna rise

## **Student Lyric Guide**

Name: \_\_\_\_\_

Transverse and Longitudinal Waves

## Back Up

### **Make the disturbance it takes, with sound and ocean waves**

Define a wave and give two examples. \_\_\_\_\_

---

---

### **To move this energy from here – to a brand new place**

**When a medium is necessary, While the energy through a vacuum explains,  
Electromagnetic rays**

Give two examples of how sound would travel through two different types of mediums.

1. \_\_\_\_\_

2. \_\_\_\_\_

Which one would travel faster? \_\_\_\_\_

How is light an example of an electromagnetic wave? \_\_\_\_\_

---

---

What are some other examples of electromagnetic waves? \_\_\_\_\_

---

---

### **Transverse me all with perpendicular motion**

**A rope so up and down just like the surface of the ocean**

When a sound goes off it creates some longitudinal waves

Bounce off and back up

Draw a diagram of how a transverse and a longitudinal wave travel.

**Now at the top of the crest ,We look around so impressed  
But down deep in the trough, We get a little distressed  
Where amplitude is ok, It's just a shallow wave  
A short distance or length to the next sunny day, Well hey this frequency is  
insane,23 million passed today!**

Label the diagram of a wave with crest, trough, amplitude, wavelength.

Describe amplitude and frequency \_\_\_\_\_

\_\_\_\_\_

**Can you dig the wave that reflects after striking a barrier?, Like  
water hitting a bridge, or when sound hits a wall**

What is reflection? \_\_\_\_\_

Draw what water would look like hitting a wall.

**Maybe diffract a little, spread out a little, When you hit the edge of the  
obstacle**

What is diffraction? \_\_\_\_\_

Draw what water would look like hitting a bridge.

How is this like a carnival of intervals? \_\_\_\_\_

\_\_\_\_\_

**When light goes into my glass, It tends to bend and refract  
Travels at different speeds, Depending where it's at**

What is refraction? \_\_\_\_\_

Draw a picture of refraction.

Why does it look like this? \_\_\_\_\_

**Though waves will join & combine, Your crest is similar to mine  
Constructive interference - positive right? ,Amplitude is so gonna rise**

The adding of two waves is called? \_\_\_\_\_

What is the result of two waves combining? \_\_\_\_\_

What is the opposite of constructive interference? \_\_\_\_\_

## **Teacher Key**

Name: \_\_\_\_\_ KEY \_\_\_\_\_

## Back Up

### Make the disturbance it takes, with sound and ocean waves

Define a wave and give two examples. *A disturbance that transfers energy from one place to another. Ex. 1 Sound Wave Ex. 2 Ocean wave*

### To move this energy from here – to a brand new place When a medium is necessary, While the energy through a vacuum explains, Electromagnetic rays

Give two examples of how sound would travel through two different types of mediums.  
*Sound waves traveling through metal. Sound waves traveling through water.*

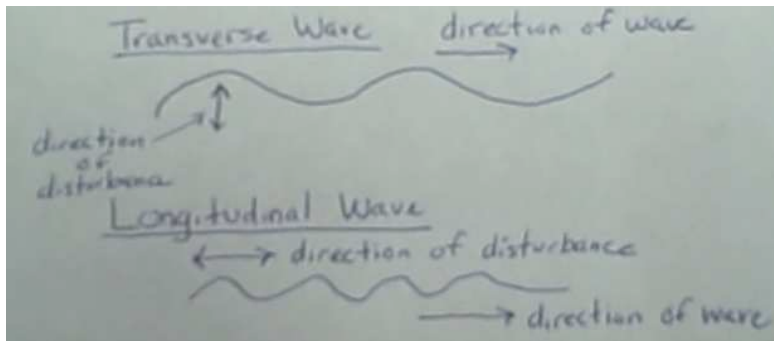

Which one would travel faster? *\_\_sound through metal\_\_*

How is light an example of an electromagnetic wave? *\_\_\_\_\_light is invisible but still transfers energy\_\_\_\_\_*

What are some other examples of electromagnetic waves? *\_\_\_\_\_heat waves, radio waves, cell phone waves*

### Transverse me all with perpendicular motion A rope so up and down just like the surface of the ocean When a sound goes off it creates some longitudinal waves Bounce off and back up

Draw a diagram of how a transverse and a longitudinal wave travel.

**Now at the top of the crest ,We look around so impressed  
But down deep in the trough, We get a little distressed**

**Where amplitude is ok, It's just a shallow wave  
A short distance or length to the next sunny day, Well hey this frequency is  
insane, 23 million passed today!**

Label the diagram of a wave with crest, trough, amplitude, frequency.

Describe amplitude and frequency *Amplitude – the distance from a line in the middle of the wave to the crest or trough. Frequency – the number of wavelengths that pass a fixed point.*

**Can you dig the wave that reflects after striking a barrier?, Like  
water hitting a bridge, or when sound hits a wall**

What is reflection? *The bouncing back of a wave after it strikes a barrier.*

Draw what water would look like hitting a wall.

**Maybe diffract a little, spread out a little, When you hit the edge of the obstacle**

What is diffraction? *The spreading out of waves through an opening*

Draw what water would look like hitting a bridge.

How is this like a carnival of intervals? \_\_\_\_\_ *answers will vary*

**When light goes into my glass, It tends to bend and refract  
Travels at different speeds, Depending where it's at**

What is refraction? \_\_\_\_\_ *the bending of a wave as it enters a new medium* \_\_\_\_\_

Draw a picture of refraction.

Why does it look like this? \_\_\_ *Because waves travel at different speeds in different mediums* \_

**Though waves will join & combine, Your crest is similar to mine  
Constructive interference - positive right? ,Amplitude is so gonna rise**

The adding of two waves is called? \_\_\_\_\_ *Constructive interference*

What is the result of two waves combining? \_\_\_\_\_ *a bigger wave*

What is the opposite of constructive interference? \_\_\_\_\_ *Destructive interference*

## **Music Video Extension Activity**

1. Hand out or project the lyrics and read them out loud and discuss their meaning
2. Play the song for the students, multiple times, encouraging them to sing along
3. Use the student lyric guide in place of, or to supplement class notes
4. Allow students class time, in small groups, to “act” out a portion of the song
5. Film the student groups singing/acting out the song
