**Wilhelm Eder GmbH: We love the wooden way -
Eder is sawing**

With our advanced technical block band saw we have the opportunity to saw oak logs up to diameter of 110 cm. The saw works very precisely and it is possible to saw the oak logs in vertical grain in staves quality. We respond to the requests of the increased global demand of storage barrels, ornamental barrels for spirits and wine industry by the production of staves, which have been certified according to the latest requirements. Using with wood from certified forests under the PEFC is the principle of production, as well as the highest category oak, hart wood and Douglas. We shall be pleased to discuss your requirements personally and provide you with detailed information about individual products. More information on www.faesser-shop.de

**The ZIM probe technique: Water saving and
high-grade quality for fruits**

The innovative ZIM probe allows a real-time remote control of the water status of plants via internet. The data of the measurements are sent worldwide via internet and allow an exact irrigation on demand. The optimum size of plant watering leads to significant savings in water consumption (up to 30 %) and to choice quality of the harvested fruits.
