

**Draft 2**

**9 February 2002**

**Research Paper Evaluation Form**

**Paper** \_\_\_\_\_

**Student** \_\_\_\_\_

Summarize (in your words) what this paper presents. Include reasonable detail about new ideas and algorithms proposed. **[400 word maximum]**

Based on your knowledge of this research area (which may be limited), does this paper provide an important contribution either in terms of new research or as a thorough survey. If your answer is Yes, discuss the one most significant result that would cause future researchers to reference this paper. If your answer is No, defend why this paper contributes little to this research area.

How well did the authors support their research in terms of showing how their new ideas outperformed previous strategies? Explain how the evidence provided supports their claim. Is there a weakness in their argument or under what conditions could their new idea run into trouble.

If you were reviewing this paper, what things would you ask the authors to fix or change to improve the quality of this paper.
