Green Buildings

Sure, the brick buildings of Longwood University's campus are beautiful. But did you know that Longwood University is home to several buildings that use Green Building technologies. Green buildings can play a significant role in working towards Longwood University's goal of a sustainable campus.

What is a "Green" Building?

A Green Building is defined as a building that is environmentally friendly. Green Buildings are planned, designed, and constructed with the intention of reducing negative environmental impacts while retaining building quality. Either through use of renewable energy sources, promotion of tree growth or extra efforts towards recycling, these buildings are doing their part in making our campus, and the planet, a little bit cleaner.

Campus Buildings Using Green Construction Methods

- [Heating Plant - Renewable fuels](#)
- [Dorrill Dining Hall - Geothermal](#)
- [The Chichester Science Center - controlling indoor air pollution and water pollution](#)
- [Parking Garage - A Green Roof](#)
- [Health & Fitness Center - LEED Certification](#)

Cleaning Green

ARAMARK has switched to using environmentally safe cleaning products on all of Longwood's buildings.

Quik fill 520 glass cleaner
Quik fill 510 general purpose cleaner
Quik fill 910 bathroom cleaner
Quik fill 310 neutral cleaner
Zinc free floor finish
Zinc free floor stripper
