MAFS.8.NS.1.1

**A CALCULATOR
IS NOT ALLOWED**

1. Select all of the numbers that are rational.

☐ $\sqrt{9}$

☐ $\sqrt{2}$

☐ $0.\overline{345}$

☐ 4.6

☐ 3.14

☐ 1.123123412345...

☐ $-4\frac{2}{3}$

☐ $-\frac{1}{2}$

☐ $\frac{22}{7}$

☐ -12

☐ π

2. Explain how you can determine whether or not a number is rational in the Open Response Box.

3. To what number system do the numbers that are not rational belong?

4. Convert the fraction $\frac{5}{11}$ to a decimal, showing all work.

5. When $\frac{5}{11}$ is written as a decimal, does it repeat? Explain why or why not.

MAFS.8.NS.1.1 FSA PRACTICE

**A CALCULATOR
IS NOT ALLOWED**

Which decimal is the equivalent of $\frac{6}{11}$?

1. Ⓐ 0.18 $\overline{3}$
 Ⓑ 0.18 $\overline{3}$
 Ⓒ 0.54
 Ⓓ 0.54

Determine whether 0.12345 is rational or irrational and explain why in the Open Response Box below.

2.

Select all of the numbers that are irrational.

3. ☐ $-\frac{2}{3}$
 ☐ $\sqrt{144}$
 ☐ $\sqrt{50}$
 ☐ $-\sqrt{144}$
 ☐ $-2.\overline{3145}$
 ☐ π

Select rational or irrational for each number shown.

Number	Rational	Irrational
$\sqrt{2}$	<input type="checkbox"/>	<input type="checkbox"/>
$-\sqrt{11}$	<input type="checkbox"/>	<input type="checkbox"/>
$\sqrt{\frac{16}{9}}$	<input type="checkbox"/>	<input type="checkbox"/>
0.3030030003	<input type="checkbox"/>	<input type="checkbox"/>

4.

Write $0.58\overline{3}$ as a rational number in the Equation Response Field.

5a.

← → ↶ ↷ ✖

1	2	3	+	-	•	÷			
4	5	6	<	≤	=	≥	>		
7	8	9	$\frac{\Box}{\Box}$	\Box^\Box	()		$\sqrt{\Box}$	$\sqrt[\Box]{\Box}$	π
0	.	-							

5b.

Draw the sequence of buttons you would click on the equation editor to display the correct answer.

MAFS.8.NS.1.2**A CALCULATOR
IS NOT ALLOWED**

1. Graph $\sqrt{6}$ on the number line below and explain how you determined its location.

2. Graph π on the number line below and explain how you determined its location.

3. Graph the approximate location of $-3.428571 \dots$ on the number line below and explain how you determined its location.

4. Order the numbers in problems 1-3 from least to greatest.

5. Graph the approximate locations for the following numbers on the number line below.

$\sqrt{2}$

π

$\frac{7\sqrt{3}}{5}$

$\sqrt{6}$

MAFS.8.NS.1.2 FSA PRACTICE

**A CALCULATOR
IS NOT ALLOWED**

Select whether each number is between 0 and 1, 1 and 2, or 4.5 and 4.9.

Number (n)	$0 < n < 1$	$1 < n < 2$	$4.5 < n < 4.9$
1. $\sqrt{\frac{\pi}{4}}$	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
$\sqrt{\frac{\pi}{2}}$	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
$\frac{3\pi}{2}$	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
$\sqrt{\pi}$	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
$\sqrt{23}$	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Graph the approximate locations for the following numbers on the number line below.

- 2.
- (1) π
 - (2) $-(\frac{1}{2}\pi)$
 - (3) $2\sqrt{2}$
 - (4) $\sqrt{17}$

For each pair of numbers, decide which is larger without using a calculator.
Insert $<$ or $>$ in the space below. Explain your choices.

Number	Write $<$ or $>$	Number	Explanation
π^2		9	
$\sqrt{50}$		$\sqrt{51}$	
$\sqrt{50}$		8	
-2π		-6	

3.

Jessica evaluates $\sqrt{2}$ on her calculator which shows a value of 1.4142136. She then writes $\sqrt{2} = 1.4142136$. Is Jessica correct? Explain.

4.

What is the approximate value of $\sqrt{20}$?

5.

- ☐ A 5
- ☐ B 10
- ☐ C 4.5
- ☐ D 5.4

MAFS.8.EE.1.1

**A CALCULATOR
IS NOT ALLOWED**

1. Circle all expressions below that are equivalent to 7^{-2} . Show or explain how you determined your choices.

$$(7)^2 \quad (-7)^2 \quad -(7)^2 \quad -49 \quad \frac{1}{49} \quad \frac{1}{7^2} \quad -\frac{1}{49} \quad \frac{1}{7^{-2}}$$

2. Circle all expressions below that are equivalent to $\left(\frac{25}{50}\right)^{15}$. Show or explain how you determined your choices.

$$\frac{25^{15}}{50^{15}} \quad \frac{25^{15}}{50} \quad \left(\frac{50}{25}\right)^{-15} \quad (0.5)^{15} \quad 2^{15} \quad \left(\frac{25^5}{50^5}\right)^3$$

Anne packed expressions in boxes, but now the box is too heavy. She is going to unpack the expressions and put them in solution boxes. Match the expressions in the table with one of the correct solution from the boxes below.

$b^{(x+y)}$

$\frac{1}{b^{(x)}}$

$b^{(x \cdot y)}$

$b^{(x-y)}$

$-b^{(x \div y)}$

$\frac{1}{b^{(x \cdot y)}}$

$\frac{b^{(y)}}{b^{(x)}}$

$b^{(x^y)}$

3.

Expression	Matches	Solution
$b^x \cdot b^y$	\longleftrightarrow	<div style="border: 1px solid black; height: 30px; width: 100%;"></div>
$b^x \div b^y$	\longleftrightarrow	<div style="border: 1px solid black; height: 30px; width: 100%;"></div>
b^{-x}	\longleftrightarrow	<div style="border: 1px solid black; height: 30px; width: 100%;"></div>
$(b^x)^y$	\longleftrightarrow	<div style="border: 1px solid black; height: 30px; width: 100%;"></div>

4. What is the value of $(2^4 \div 2^2)^3$?

**A CALCULATOR
IS NOT ALLOWED**

MAFS.8.EE.1.1 FSA PRACTICE

Which expressions are equivalent to $\frac{1}{2^6}$? Select all that apply.

1.

<input type="checkbox"/>	$2^{-5} \cdot 2^{-1}$
<input type="checkbox"/>	$2^{-3} \cdot 2^2$
<input type="checkbox"/>	$2^{-2} \cdot 2^{-4}$
<input type="checkbox"/>	$2^1 \cdot 2^5$
<input type="checkbox"/>	$2^1 \cdot 2^6$
<input type="checkbox"/>	$2^2 \cdot 2^{-8}$
<input type="checkbox"/>	$2^2 \cdot 2^3$

Choose the expressions that are not equivalent to $\frac{1}{4} \cdot \frac{1}{4} \cdot \frac{1}{4} \cdot \frac{1}{4} \cdot \frac{1}{4}$? Select all that apply.

2.

<input type="checkbox"/>	$\frac{1}{4^5}$
<input type="checkbox"/>	$\left(\frac{1}{4}\right)^{-5}$
<input type="checkbox"/>	$4^{-3} \cdot 4^{-2}$
<input type="checkbox"/>	4^5
<input type="checkbox"/>	$\frac{1}{256}$
<input type="checkbox"/>	$\frac{1}{20}$

What is the value of $(3^6 \div 3^5)^2$?

- 3.
- (A) 1
 - (B) 3
 - (C) 9
 - (D) 27

Evaluate the following expressions. Show work

4.

Expression	Work	Evaluated Expression
$(4^{-3})(4^6)$		
$6^{-3} \div 6^1$		
$\frac{3^2}{3^{-2}}$		
$4^{-3} \times 2^{-3}$		

MAFS.8.EE.1.2

**Neutral – Items Appear on
Calculator and No Calculator
Session**

Evaluate the following expressions.

1.

Expression	Evaluated Expression
$\sqrt{121}$	
$\sqrt{\frac{4}{9}}$	
$\sqrt[3]{512}$	
$\frac{\sqrt{4}}{\sqrt{9}}$	
$\frac{4}{\sqrt{9}}$	
$\sqrt[3]{\frac{1}{27}}$	

The square tile below has an area of 324 square inches. What is the perimeter of the square tile in inches?

2.

← → ↶ ↷ ✖

1	2	3	+	-	•	÷			
4	5	6	<	≤	=	≥	>

$(4 \times 10^2) (2 \times 10^2)$	\longleftrightarrow	<div style="background-color: #00a0e3; width: 100px; height: 30px; border: 1px solid #ccc;"></div>

MAFS.8.EE.2.5

**A CALCULATOR
IS ALLOWED**

1. Rodnika has a saltwater fish tank. She knows the water in the tank must have the right amount of salt in order for the fish to survive. To get the proper salinity, Rodnika mixes the water and salt according to the measurements shown in the table.

Graph the line that represents the relationship shown in the table.

Distilled Water (in gallons)	Sea Salt (in cups)
0	0
1	$\frac{1}{2}$
2	1
4	2

Part A

What is the slope of the line?

Part B

What does the slope mean in this situation?

2. A solution is 20% bleach.

Create a graph that represents all possible combinations of the number of liters of bleach, contained in number of liters of solution.

- 3.

Two utility companies sell electricity in units of kilowatt-hours. The cost of electricity for company P is shown in the table below. The cost of electricity for company M can be found by using the equation shown below, where y represents the total cost in dollars for x kilowatt-hours of electricity.

Electricity Costs		
Company P		Company M $y = 0.15x$
Number of Kilowatt-hours	Total Cost (dollars)	
1,250	150.00	
1,650	198.00	

- Use this information provided to find the unit rate, in dollars per kilowatt-hour, for each company. Show your work or explain your answers.
- Find the total cost, in dollars, of buying 2,375 kilowatt-hours of electricity from the **least** expensive company.

4.

Jack and Jill are selling pails that carry water. The cost of Jack's pail is represented by the equation $p = \frac{5}{4}w$ where p is the price of the pail in dollars and w is the volume of the pail, in gallons.

Jill's pail prices can be modeled with this graph:

**Part A**

Suppose Jack graphed his equation. Identify the slope of his graph and explain what it means.

Part B

Identify the slope of Jill's graph and explain what it means.

Part C

How do the slopes of the graphs compare? Explain.

MAFS.8.EE.2.5 FSA PRACTICE

**A CALCULATOR
IS ALLOWED**

1. Two different proportional relationships are represented by the equation and the table.

Proportion A

$$y = 9x$$

Proportion B

x	y
0	0
3	34.5
5	57.5
8	92

Circle the correct answer from the drop-down menus to complete the sentence, comparing the rates of change of the proportional relationships.

The rate of change in Proportion A is

Choose...	Choose...
Choose...	Choose...
1.5	more
2.5	less
25.5	
43.5	

than the rate of change in Proportion B.

2. The number of bottles a machine fills is proportional to the number of minutes the machine operates. The machine fills 250 bottles every 20 minutes. Create a graph that shows the number of bottles, y , the machine fills in x minutes.

3. Antwan is painting all the rooms in his house this year. Below is a graph representing the relationship between quantity of paint and the area covered by the paint.

Part A

Determine a unit rate for this relationship and describe it in words.

Part B

Determine the slope of the graph and describe it in words.

4. The gasoline mileage for two cars can be compared by finding the distance each car traveled and the amount of gasoline used. The table shows the distance that car M traveled using, x , gallons of gasoline. The graph shows the distance, y , that car P traveled using x gallons of gasoline.

Car M	
Amount of Gasoline (gallons)	Distance (miles)
2	50.4
3	80.5
7	181.3
5	137.5

Based on the information in the table and the graph, compare the approximate miles per gallon of car M to car P. Show your work or explain your answer.

Enter your answer and your work or explanation in the space provided.

A pool cleaning service drained a full pool. The following table shows the number of hours it drained and the amount of water remaining in the pool at that time.

1.

Pool Draining

Time (hours)	3	5	7	9	11
Water Remaining (gallons)	13,200	12,000	10,800	9,600	8,400

Part A

Plot the points that show the relationship between the numbers of hours elapsed and the number of gallons of water left in the pool.

Select a place on the grid to plot each point.

**Part B**

The data suggests a linear relationship between the number of hours the pool has been draining and the number of gallons of water remaining in the pool. Assuming the relationship is linear, what does the rate of change represent in the context of this relationship?

- A. The number of gallons of water in the pool after 1 hour.
- B. The number of hours it took to drain 1 gallon of water.
- C. The number of gallons drained each hour
- D. The number of gallons of water in the pool when it is full.

Part C

What does the y-intercept of the linear function represent in the context of this relationship?

- A. The number of gallons of water in the pool after 1 hour.
- B. The number of hours it took to drain 1 gallon of water.
- C. The number of gallons drained each hour
- D. The number of gallons of water in the pool when it is full.

Part D

Which equation describes the relationship between the time elapsed and the number of gallons of water remaining in the pool?

- A. $y = -600x + 15,000$
- B. $y = -600x + 13,200$
- C. $y = -1,200x + 13,200$
- D. $y = -1,200x + 15,000$

2. A construction supply store sells steel bars for a certain price per kilogram. No matter how much steel is ordered, the company adds on the same delivery charge.

The cost for an order of 100 kilograms of steel bars is \$230. The cost for an order of 150 kilograms of steel bars is \$320.

Write an equation for the cost of an order of steel bars (y) in terms of the weight of steel bars ordered (x). Show or explain how you found your equation.

3. Taro and Jiro climbed a mountain and hiked back down. At the summit and at every station along the way back down, they recorded their altitude and the amount of time they had been travelling.

Hiking Data

Time Travelled (in minutes)	Altitude (in meters)
0	3776
$29\frac{1}{3}$	3600
126	3020
$179\frac{1}{3}$	2700
231	2390

Write an equation that models Taro's and Jiro's altitude in terms of the amount of time they had travelled. Explain how you found your equation.

 - b. How will the measures of $\angle A$ and its image compare?
3. Suppose $\angle A$ is reflected in some way.
 - a. Will the image of $\angle A$ also be an angle? Is it possible to reflect $\angle A$ in a way that results in a figure that is not an angle?
 - b. How will the measures of $\angle A$ and its image compare?

3.

Lines m and n are parallel on a coordinate plane. Lines m and n are transformed by the same rotation, resulting in image lines s and t . Which statement describes the relationship between lines s and t ?

- ☐ A Lines s and t are parallel
- ☐ B Lines s and t are perpendicular.
- ☐ C Lines s and t are intersecting but not perpendicular.
- ☐ D The relationship between lines s and t cannot be determined without knowing the angle of the rotation.

4.

1. Suppose lines a and b are translated in some way.
 - a. Will the images of lines a and b also be parallel lines? Is it possible to translate lines a and b in a way that does not result in a pair of parallel lines?
 - b. How will the distance between lines a and b compare to the distance between their images?
2. Suppose lines a and b are rotated in some way.
 - a. Will the images of lines a and b also be parallel lines? Is it possible to rotate lines a and b in a way that does not result in a pair of parallel lines?
 - b. How will the distance between lines a and b compare to the distance between their images?
3. Suppose lines a and b are reflected in some way.
 - a. Will the images of lines a and b also be parallel lines? Is it possible to reflect lines a and b in a way that does not result in a pair of parallel lines?
 - b. How will the distance between lines a and b compare to the distance between their images?

1. Line symmetry exists as the result of which kind of a transformation?
 - Ⓐ Translation
 - Ⓑ Transformation
 - Ⓒ Reflection
 - Ⓓ Rotation

2. A horizontal line is translated seven units to the right. Which of the following is true?
 - Ⓐ The new line and the original line are the same
 - Ⓑ The new line has a different y -intercept than the original line
 - Ⓒ The new line has a different slope than the original line
 - Ⓓ The new line is a line a segment

3. When an angle is reflected across a line, what happens to its measure?
 - Ⓐ It remains the same
 - Ⓑ It doubles
 - Ⓒ It halves
 - Ⓓ Not enough information

4. Two parallel lines are separated by a distance of 5 units. If one is translated 3 units to the right, will the lines remain parallel?
 - Ⓐ It depends on the y -intercepts of the lines
 - Ⓑ Yes, they will remain parallel
 - Ⓒ It depends on the slopes of the lines
 - Ⓓ No, they will not remain parallel

1. Given the figure below and knowledge of parallel lines and vertical angles, which of the following can be proved to be true?

- Ⓐ $m\angle 1 + m\angle 6 + m\angle 2 = 180^\circ$
 - Ⓑ $m\angle 1 + m\angle 3 + m\angle 4 = 180^\circ$
 - Ⓒ $m\angle 1 + m\angle 2 + m\angle 3 = 180^\circ$
 - Ⓓ None of the above
2. If we know that $m\angle 1 + m\angle 2 + m\angle 3 = 180$ and $m\angle 3 + m\angle 4 = 180$, what can we prove about the diagram below? Justify your answer.

- Ⓐ $m\angle 1 = m\angle 2$
- Ⓑ $m\angle 3 = m\angle 4$
- Ⓒ $m\angle 1 + m\angle 2 = m\angle 4$
- Ⓓ $m\angle 1 + m\angle 2 + m\angle 4 = 180^\circ$

3. Which statement is illogical given the fact that the angles of a triangle add up to 180° ? Justify your answer.

- Ⓐ A right triangle has 2 acute angles
- Ⓑ An equilateral triangle has three 60° angles
- Ⓒ All pentagons have a total of 540°
- Ⓓ An obtuse triangle has 3 obtuse angles

4. The figure shows line RS parallel to line UV. The lines are intersected by 2 transversals. All lines are in the same plane.

Part A

Explain why triangle RTS is similar to triangle VTU. Enter your explanation in the space provided.

Part A

Given that $m\angle STU = 108^\circ$, determine $m\angle SRT + m\angle TUV$. Show your work or explain your answer. Enter your answer and your work or explanation in the space provided.

MAFS.8.G.2.6

**A CALCULATOR
IS ALLOWED**

1. Explain how Figure 1 demonstrates the Pythagorean Theorem. The shaded triangle is a right triangle.

Figure 1

2. Which of the following three numbers are also the sides of a right triangle?

- (A) 1, 1, 2
- (B) 3, 3, 4
- (C) $1, 1, \sqrt{2}$
- (D) $6, 6, 3\sqrt{3}$

3. Why is the Converse of the Pythagorean Theorem equally as important as the Pythagorean Theorem itself?

- (A) It allows us to identify right triangles
- (B) It allows us to calculate side lengths of right triangles
- (C) It allows us to calculate angle measures of right triangles
- (D) It isn't as important as the Pythagorean Theorem itself

4. The converse of the Pythagorean Theorem states: If a triangle has side lengths of a , b , and c , and $a^2 + b^2 = c^2$, then the triangle is a right triangle. Mr. Lopez presented the following proof of the theorem to his math students and asked them to interpret the meaning.

1. The first thing Mr. Lopez did was draw a right triangle, triangle RST , with legs the same length as those of triangle ABC (see above). Why can Mr. Lopez say that $r^2 + s^2 = t^2$?
2. Since $r^2 + s^2 = t^2$, he claimed that $a^2 + b^2 = t^2$? Why can a and b be substituted for r and s ?
3. He then stated that $t^2 = c^2$. Explain why this must be true.
4. He finally stated that $t = c$ and explained that if the three sides of one triangle are congruent to the three sides of another triangle, then the triangles must be congruent. What can be said now of the measure of angle C ? What does this mean about triangle ABC ?

5. Tammy attempted to prove Pythagorean theorem. Look carefully at her attempt. Determine if she is correct. Justify your answer.

Suppose a right triangle has sides of length a , b and c

Draw squares on the three sides as shown.

Divide these squares into smaller squares.

You can see that the number of squares on the two shorter sides add up to make the number of squares on the longest side.

So: $a^2 + b^2 = c^2$

1. Students at Beach Middle School were surveyed regarding their preference for school start times. Responses were recorded by grade level.

Relative frequencies are shown in the two-way table below:

School Start Time Preference by Grade Level

	6 th grade	7 th grade	8 th grade
Prefer earlier start time	55%	75%	90%
Prefer later start time	45%	25%	10%

Explain any association between grade level and preference of school start time. Use data from the table to support your answer.

What does the 25% in the second row of the table mean in the context of this problem?

2. A sample of students in middle school was randomly selected. Each student was asked whether he or she played a team sport and played a musical instrument. The following are the results:

Playing Sports and Playing Musical Instruments

Student	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
Plays Team Sport	y	y	n	n	n	n	y	y	n	y	y	y	n	n	y	n	y	n	n	y
Plays Instrument	y	n	n	n	y	n	y	y	n	y	n	y	n	y	y	n	y	n	y	y

Note: y = yes; n = no

Construct a two-way table to summarize the data given in the table above.

3. Students at Westside Middle School were surveyed regarding their preference for team sports (such as basketball) versus individual sports (such as swimming) and their preference for mathematics versus science.

The results are shown in the two-way table below:

Student Preference for Sport and Subject

	Prefer Math	Prefer Science
Prefer Team Sports	80	25
Prefer Individual Sports	40	45

In the table below, record the relative frequencies by row.

Student Preference for Sport and Subject – Relative Frequency Table

	Prefer Math	Prefer Science	Total
Prefer Team Sports			
Prefer Individual Sports			

In the table below, record the relative frequencies by column.

Student Preference for Sport and Subject – Relative Frequency Table

	Prefer Math	Prefer Science
Prefer Team Sports		
Prefer Individual Sports		
Total

**A CALCULATOR
IS ALLOWED**

1. Students at Beach Middle School were surveyed regarding whether they have a sibling and whether they have a pet.

Relative frequencies are shown in the two-way table below:

Beach Middle School Siblings and Pets

	Have a pet	Have no pet
Have a sibling	$\frac{10}{90}$	$\frac{80}{90}$
Have no sibling	$\frac{70}{75}$	$\frac{5}{75}$

Explain any association between having a pet and having a sibling. Use data from the table to support your answer.

What does the $\frac{5}{75}$ mean in the context of this problem?

2. The table shows the results of a random survey of students in grade 7 and grade 8. Every student surveyed gave a response. Each student was asked if he or she exercised less than 5 hours last week or 5 or more hours last week.

	Less than 5 hours	5 or more hours
Grade 7 Students	49	63
Grade 8 Students	58	51

Based on the results of the survey, which statements are true?
Select **each** correct statement.

<input type="checkbox"/>	More grade 8 students were surveyed than grade 7 students.
<input type="checkbox"/>	A total of 221 students were surveyed.
<input type="checkbox"/>	Less than 50% of the grade 8 students surveyed exercised 5 or more hours last week.
<input type="checkbox"/>	More than 50% of the students surveyed exercised less than 5 hours last week.
<input type="checkbox"/>	A total of 107 grade 7 students were surveyed.

3. Ikeoluwa collected data on whether 65 professional golfers have PRACTICEd for at least 10,000 hours in their career and whether they have won a major championship. The Venn diagram below shows her data.

	Have PRACTICEd for a least 10,000 hours	Have not PRACTICEd for a least 10,000 hours
Have won a major	<input type="text"/>	<input type="text"/>
Have not won a major	<input type="text"/>	<input type="text"/>
Total	<input type="text"/>	<input type="text"/>
