MILLENNIUM PERIODONTICS - CONSE	DATE OF SURGERY		PULSE:
DIAGNOSIS: After a careful oral examination and study of m			
in all likelihood – significant gum recession. I understand th			
crowns with edges under the gum line, it is important to have	ve sufficient width of attached gum t	o withstand the irritation	on caused by the fillings or edges. Gum tissue
may also be placed to improve appearance and to protect re	oots of the teeth.		
RECOMMENDED TREATMENT: In order to treat this condition	n, I hereby consent, authorize and re	equest Dr. Christine Gad	dia or Dr. Robert Busan to perform certain
remedial measures including but not limited to one or more	of the following ridge augmentation	s or associated procedu	ure:
Gingival Grafts (Free Gingival or Connective	Tissue) Coronally	/ Displaced Flap	
Ridge Augmentation	Use of Do	ontated Human Ti	ssue for Graft
Frenectomy	(a cellula	r dermal matrix)	
Pedicle Autografts	•	ologic Mediators	
Subepithelial Connective Tissue Grafts			
These procedures will be performed in areas of my mouth v	with gum recession and or ridge defic	iencies Tunderstand th	nat anesthetic and/or medication will be
administered to me as part of the treatment, which may be	•		•
gum from elsewhere in my mouth or the use of donated tiss	·	= :	
can be placed so as to partially cover the tooth root surface	· · · · · · · · · · · · · · · · · · ·		
EXPECTED BENEFIT; The purpose of ridge augmentation and		=	
likelihood of further gum recession. Another purpose for th	•		-
ridge, the teeth and gum line, or to prevent or treat root ser	nsitivity or root decay.		• •
PRINICPAL RISKS AND COMPLICATIONS: Any surgical interf	erence carries certain risks and comp	olications that may arise	e. I understand that a small number of patients
do not respond successfully to ridge augmentation. If a tran	splant is placed, so as to partially cov	er the tooth root surfa	ce exposed by the recession, the gum placed
over the root may shrink back during the healing. In such a	case, the attempt to cover the expos	ed root surface may no	t be completely successful. Indeed, in some
cases, it may result in more recession or with increased space	ing between the teeth.		
I understand that complications may result from ridge augm	ientation or from anesthetics or med	lications administered.	These complications include, but are not
limited to (1) post-surgical infection, (2) bleeding, hematom		-	
discoloration, (4) transient or on occasion permanent tooth	·	=	· ·
foreign matter, (7)transient but on occasion permanent nur	- · · · · -		
determined and they may be irreversible. There is no metho		· =	-
