GENERAL GEOLOGY

Figure 3

INTRODUCTION

During the period May 15 to June 05, 1997 Frank Houghton License No. E29577 residing at P.O. Box 264, Beardmore, Ontario P0T 1G0, conducted prospecting for Peninsula Gold Explorations Ltd. on the Peninsula Property in Ashmore Township, District of Thunder Bay, Ontario. He was assisted by Philip Houghton addressed at General Delivery, Beardmore, Ontario.

The work area was daily accessed by pickup truck from Beardmore, Ontario to Kenogamisis Lake and then by boat to the Property location. A total of 20 man days of prospecting was completed (**See daily Log under “Supporting Documents”**).

The purpose was to locate areas of interest for later backhoe digging. Therefore no samples were taken at this time as better exposure would be available for assay sampling during the following the backhoe digging procedure.

The prospecting results which are shown on Map 1 were tied into a winter cut 1996 grid. This grid was used for a VLF and Magnetometer survey conducted by Peninsula Gold Explorations Ltd. during 1996.

A daily log, presented under **“Supporting Documents”**, gives details at the prospecting work. A total of 20 man days (**2 men**) constituted the work days.

PROPERTY

The property consists of two mining claims TB 1208515 (**16 units**) and TB 1208514 (**16 Units**). It is shown on the Ashmore Twp. claim Map G-472 (**Fig. 2**). The property is 100% owned by Frank Houghton, P.O. Box 164, Beardmore, Ontario.

It was optioned by Peninsula Gold Explorations Ltd., Suite 601, 347 Bay Street, Toronto, Ontario on May 22, 1997 from L. Clarke and F. Houghton. (**see abstracts under “Supporting Documents”**).

LOCATION AND ACCESS

The Peninsula Gold Property is located at Longitude 86 50' and Latitude 49 44' on the north shore of Kenogamisis Lake about 9 km east of Geraldton, Ontario. (**Fig. 1**).

The property may be reached from a point on Highway 11, about 5 km east of Geraldton,

at the Main Narrows on Kenogamisis Lake and by boating 5 km northeast along the lake to the Peninsula God Property.

PREVIOUS WORK

Being in close proximity to several past gold producers in the “Geraldton Camp” it is likely that the area was prospected in the early 1930's. The earliest record of work on the property area was by Little Long Lac Gold Mines who conducted some type of magnetic survey and drilled 5 holes in the general area of 10+00W on the present grid at the south shore of the property. There is no record of these DDH results. Pye's 1951 geology map No. 1951-2 also show several diamond drill holes southward from the south lake shore.

During 1997 prospecting by Houghton several old trenches of 1940 to 1960 vintage were observed on the property. There is no record of these trenches.

No record of other work exists until Peninsula Gold Mines Ltd. established a winter grid in 1996 (the present grid) and conducted a VLF EM and magnetometer survey outlining several VLF EM conductors. Peninsula Gold Mines Ltd. also conducted some soil sampling over the south central part of the grid which returned several anomalous gold values, at several locations ranging from 50 ppb gold to 334 ppb gold. The 1997 prospecting was conducted to locate locations interest for backhoe trenching to define best potential targets for follow up drilling. This needs to be completed in winter due to access difficulties for heavy equipment.

PROPERTY GEOLOGY

The general property geology is defined by Pye (1951: Map No. 1951-2) which shows the property to be underlain by easterly trending mafic volcanics intercalated with many thin (less than 100 m wide) interlayers dioritic to gabbroic intrusions (Fig. 3). These rocks are cut by numerous, generally northwesterly striking narrow diabase dikes. A two easterly trending faults and one northerly trending fault are also indicated on Map 1951-2. The south easterly striking fault apparently cuts across the area of the old trenches

During the 1997 prospecting, quartz veining and minor pyritization was observed in chloritic shears in these trenches.

PROSPECTING RESULTS

Prospecting located several old trenches designated for future backhoe trenching. Several chloritic mafic shear zones, some with pyrite mineralization were also noted. Most of the VLF EM conductors lie along draws or in swamps. However several of these were flagged for trenching where there are nearby outcrops and overburden appears to be shallow. Quartz veining and minor pyritization was observed in some of the old trenches.

Mafic volcanics are found in most of the area. Several diabase dikes striking generally northwest were also observed. The chloritic shear systems trend neatly east-west and dip -65° to -85° to the north.

RECOMMENDATIONS

It is recommended that the locations of the old trenches and several of the VLF EM conductors be tested with backhoe digging and well sampled for assay. Drilling would follow to test locations which returned significant gold values. The winter cut picket line was completed when there was five feet of snow so the lines are now hard to see and all the pickets have fallen down. Therefore the baseline and lines crossing areas of VLF EM conductors should be rechaind and picketed so that location control can be maintained. The VLF EM conductors should be flagged and redefined in areas of outcrop or shallow overburden so that they can be accurately pinpointed for backhoe trenching.

SUPPORTING DOCUMENTS

Frank Houghton Prospecting Log

Abstracts

**1997 FRANK HOUGHTON PROSPECTING LOG
FOR PENINSULA GOLD EXPLORATIONS LTD.**

**PENINSULA GOLD PROPERTY
ASHMORE TWP.**

Frank Houghton and assistant

Philip Houghton also worked as an assistant on all days logged.

- May 15, 16, 20, 21: Prospected for trenches between 1+50W and 5+50W south of BL 0+00. Mucked out main trench: (**Trench 1**) and mapped it in detail (**Sketches #1 and #2: Map 1**). Found quartz veining and pyrite in shear zone. All the trenches are very old and covered with debris and growing trees in some of them.
- May 23: Chained BL 0+00 from 200W to 500W and lines 200W, 250W, 300W 350W, 400W and 450W from BL 0+00 south to the lake because all the pickets on 1995 winter cut grid were fallen down.
- May 25: Chained in the trench locations and flagged several places for backhoe trenching.
- May 27: Prospected shoreline and the rocky area at 100E to east tip of point. Found mafic volcanics and chloritic shear zone with minor pyrite and small rusty quartz vein.
- May 28, 29: Prospected area between 450W and 1000W (**at N-S claim line**) found only mafic volcanics
- May 30: Prospected north of BL 0+00 from 100E to 550E at cedar swamp. Found one chloritic shear and mafic volcanics.

Total 10 Prospecting days with two men equals 20 man-days of prospecting.

June 04, 05, 1997: Drafted prospecting map and wrote short report.

Total work days = 22 man days.

8. Instructions for cutting back credits that are not approved. Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- 3. Credits are to be cut back equally over all claims listed in this declaration; or
- 4. Credits are to be cut back as prioritized on the attached appendix or as follows (UNUSUAL):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

Calculations of Filing Discounts:

1. Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work.
2. If work is filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

TOTAL VALUE OF ASSESSMENT WORK x 0.50 = Total \$ value of worked claimed.

Note:
 - Work older than 5 years is not eligible for credit.
 - A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Certification verifying costs:

I, FRANKLIN HOULTON (please print full name), do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying Declaration of Work form as recorded holder I am authorized (recorded holder, agent, or state company position with signing authority) to make this certification.

Dear Sir or Madam:

Submission Number: 2.18287

Status

Subject: Transaction Number(s): W9840.00164 Deemed Approval

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached *summary page(s)* indicate the results of the review. **WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.**

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice.

Please note any revisions must be submitted in **DUPLICATE** to the Geoscience Assessment Office, by the response date on the summary.

If you have any questions regarding this correspondence, please contact Steve Beneteau by e-mail at benetest@epo.gov.on.ca or by telephone at (705) 670-5855.

Yours sincerely,
