

-Receiving Application Data from Tenstreet

We POST the XML as a UTF-8 string with a content-type text/xml. I've attached some example XML strings we'd POST over. Your listener must be able to accept secure connections (SSL). We only use SSL to send data/documents to ensure the privacy of information contained within our systems while they are in transit to you. When the listener has been set up, please notify Tenstreet so that final completion steps can be performed.

Most of the fields in the export are straightforward, but if you have any questions, please let us know. It's unlikely that all of these fields will appear in your particular application (the XML is a superset of all possible fields). Custom fields appear in the CustomQuestions element (these are questions specific to the customer on their application) and CustomDataElements element (these are equivalent to what we call Tags, which are custom data fields in our dashboard app, which is where you may see many of the fields specific to your company). We do add additional elements from time to time as the scope of our application and processes expand, but we won't remove or change any existing elements (to maintain backwards compatibility).

While we don't have a formal xsd, here is a high level overview of the data

Overview

- **PersonalData:** This section contains demographic info on the candidate.
- **ApplicationData:** This is data from your application. Not all of these fields will be filled in every time, and depending on your application setup, some sections may not appear at all.
 - **License:** If endorsements are present, they'll be listed here (Tanker, X Endorsement, HazMat, DoublesTriples, Other). If your app asks about restrictions, these will be answered as yes/no.
 - **Accident:** accident_nature will be things like Backing, Side-swiped, I was Rear-ended, Hit parked vehicle/stationary, etc.
 - **UnemploymentPeriods:** Describes unemployment along with start and end dates.
 - **Employers:** Describes all past employers provided.
 - **Schools:** Describes schools attended along with start and end data as well as location information.
 - **TruckingSchool:** Courses can be Border Crossing, FMCSR, Log Books and Hazardous Materials.
 - **Military:** Describes Military information such as; startdate, enddate, branch, discharge type, discharge rank, and discharge description
 - **MotorVehicleReports:** yes/no to the question. if yes, the date of the incident and a description are required.

- Suspension: Has any license, permit or privilege ever been denied, suspended or revoked for any reason?
- DuringSuspension: Have you ever been convicted of driving during license suspension or revocation, or driving without a valid license or an expired license, or are any charges pending?
- ConvictedAlcoholSubstance: Have you ever been convicted for any alcohol or controlled substance related offense while operating a motor vehicle, or are any charges pending?
- ConvictedDrugs: Have you ever been convicted for possession, sale or transfer of a drug, marijuana, amphetamines, or derivatives thereof, or are any charges pending?
- ConvictedReckless: Have you ever been convicted of reckless driving, careless driving or careless operation of a motor vehicle, or are any charges pending?
- PositiveTest: Have you ever tested positive, or refused to test, on any pre-employment drug or alcohol test administered by an employer to which you applied for, but did not obtain, safety-sensitive transportation work covered by DOT agency drug and alcohol testing rules during the past three years?
- CriminalRecord: just like MVR, yes/no to question. If yes, provide date of incident and a description.
 - ConvictedCrime: Have you ever been convicted of a crime?
 - DeferredProsecutions: Do you have any Deferred Prosecutions?
 - ChargesPending: Or any criminal charges pending?
 - Felony: Have you ever pled "guilty" to, been convicted of, or pled "no contest" to a felony?
 - CanadianMinistersPermit: If you have any felony convictions, do you currently hold a ministers permit to enter or exit Canada?
 - Misdemeanors: The question may vary if you choose to edit it, but the default is: Have you, within the last five years, pled "guilty" to, been convicted of, had prosecution deferred in connection with, or pled "no contest" to a misdemeanor?
- Violations: Describes violations incurred by driver. ○ CustomQuestions and CustomDataElements: Describes information distinct to your company.
- ProviderVerifiedData: This is data from Xchange. Most interfaces ignore this data, since any changes people find while verifying employers and such are updated in ApplicationData. Still, it's here should you need it and if you're backing up data, you'd probably want to store the XML.
- FormsData: If you decide to use any custom forms from the FormsEngine, their data would be here. export_sample2 has a couple of representative examples of how this data appears, but since the forms are built entirely for you, the fields will be completely different.
- DriverChangeLog: Changes in status, worklist, recruiter (Primary User), processor (Secondary User), etc. are logged here.

- DQFData: If you use our DQF, the compliance information is presented in this section.

As stated above, CustomDataElements are Tags in the dashboard. If you choose to export them, they will appear in your XML as the following:

```
<CustomDataElement>
<CustomDataPrompt>Flatbed Skills</CustomDataPrompt>
<CustomDataValue>Yes</CustomDataValue>
<CustomDataId>flatbed_skills</CustomDataId>
<CustomDataCustomerCode>y</CustomDataCustomerCode>
</CustomDataElement>
```

CustomDataPrompt: Exactly as the Tag appears to the user in our UI CustomDataValue: the value of the Tag CustomDataId: if you would like to cross reference the Tag name to something specific in your system, we can put it here (so a prompt of Hire Date might be HireDate or hire_date here)

CustomDataCustomerCode: If the Tag is a dropdown in Tenstreet, we can cross reference the dropdown value to a value meaningful in your system ("Yes" might become "y" or "1", for example)

For custom questions on your application, they appear as follows, in a manner similar to CustomDataElements:

```
<CustomQuestions>
<CustomDataElements>
  <CustomDataElement>
    <CustomDataPrompt>Driver Number</CustomDataPrompt>
    <CustomDataValue>1234567</CustomDataValue>
    <CustomDataId>LegacyEmployeeNumber</CustomDataId>
  </CustomDataElement>
  <CustomDataElement>
    <CustomDataPrompt>Orientation Location</CustomDataPrompt>
    <CustomDataValue>LA, Broussard</CustomDataValue>
    <CustomDataId>OrientationLocation</CustomDataId>
  </CustomDataElement>
  <CustomDataElement>
    <CustomDataPrompt>Hire Date</CustomDataPrompt>
    <CustomDataValue>04/01/2011</CustomDataValue>
    <CustomDataId>HireDate</CustomDataId>
  </CustomDataElement>
  <CustomDataElement>
    <CustomDataPrompt>Termination Date</CustomDataPrompt>
    <CustomDataValue>04/15/2011</CustomDataValue>
    <CustomDataId>TerminationDate</CustomDataId>
  </CustomDataElement>
</CustomDataElements>
</CustomQuestions>
```

POST Response

You should always send a POST response, even if no fields were updated. The following is a sample response:

```
<TenstreetResponse>
  <EmployeeNumber>132456</EmployeeNumber>
```

```
<Status>ACCEPTED</Status>  
<Description>Field 1: Status is already set to Terminated. Field 2: Worklist is already  
set to 2755. Field 3: CustomDataElement #1 (tag Termination Date): Provided  
value (2012-01-01) is identical to current value. Doing nothing. Field 4: Subject  
4097 Hire Date tag updated from '2012-03-05' to '2012-03-02'.</Description>  
</TenstreetResponse>
```

Of these fields, the two that are absolutely required are Status and Description. The rest are optional.

- EmployeeNumber - will update the driver's number in our system if you provide it (to maintain your cross reference)

3. Status - ACCEPTED or REJECTED

4. StatusDescription - This can say anything, and is visible in the user interface if the status is Rejected (so that a user can take action). Some of our customers have listeners that require certain fields to be set and have validation routines that run, echoing responses in the statusdescription upon failure. We show these to the user to remind them to populate certain fields.

Appendix A: Sample 1 XML Sent
