

Above PAR

VistA-integrated

Equipment and Inventory

Management

DSS^{INC}
EHR-INNOVATION

Expendable and non-expendable inventory management is key to an organization's success. Currently, many software systems do not enforce the security and data-entry controls necessary to create reliable inventory data.

VA medical centers can mitigate these potential setbacks with an intuitive solution from Document Storage Systems (DSS) – Above PAR. This VistA-integrated real-time software solution (AEMS/MERS and GIP) is designed to streamline workflow processes, add security and data-entry controls, and improve reporting for equipment and inventory management.

The Above PAR Difference

Modernize equipment, inventory and work order management processes with Above PAR's easy-to-use, secure platform that allows the user to see all of the information about each inventory record at a glance. Among the many benefits of Above PAR:

Fast Data Entry, Instant Data Display

Above PAR's Graphical User Interface (GUI) greatly streamlines the data-entry process through single-screen data entry for each function (Equipment, Inventory and Work Orders). In addition, full-color, easy-to-read dashboards

provide visual representation of inventory and performance metrics. Dashboards quickly display real-time data such as inventory levels, turn-in status and assigned work orders, and can be customized to a site's needs.

Reduces Costs

Improved inventory accuracy, which reduces unnecessary costs, is another benefit Above PAR provides through a complete tracking platform that covers all items and tracks levels of inventory in real time. Users can view purchase orders as well as import the data from purchase orders to streamline the process of receiving supply inventory and equipment at a facility.

Experience the Benefits of Above PAR

- « Equipment Inventory Tracking Module: Easy Search capability, Turn In process, Bulk Edits, Preventive maintenance information, with the ability to attach documents/images to equipment records.
- « Work Order Tracking Module: Quick links from equipment records to work order and history of maintenance for each piece of equipment.
- « Supply Inventory Tracking Module: Inventory adjustment, Distribution Orders/Picking Tickets, Purchase order integration, distribution point maintenance, and ability to attach documents/images to inventory records.
- « Reporting Module: Ad-hoc and custom reporting.

The screenshot displays the 'Above PAR Private build Larry A' application window. It features a navigation menu with 'Admin', 'Equipment', 'Work Orders', 'Inventory', and 'Reports'. The main interface is divided into several sections:

- Distribution Point Health:** A summary section on the left with colored boxes indicating counts: 249 (red), 362 (orange), 264 (yellow), 104 (green), 44 (blue), and 374 (purple).
- Distribution Orders:** A table listing orders with columns: Dist. #, Source, Date, Type, Status, Initiated By, and Items.
- Distribution Point Items on Order:** A table with columns: Item #, Description, Group, Unit/Issue, Purchase Order #, Vendor Name, Qty, Req Delivery, NSN, and Last D.
- Distribution Point Items Received by Warehouse:** A table with columns: Item #, Description, Group, Unit/Issue, Purchase Order #, Vendor Name, Qty, Partial(s), NSN, and Last Date.

Streamlines Data Entry

With Above PAR's seamless integration with the VistA system (AEMS/MERS and GIP), all data entered into the Above PAR system is saved in the VistA system database. Features such as Bulk Edit, allow changes to multiple items at one time. Integration with IFCAP allows purchase order information to be displayed within Above PAR without having to leave the screen.

Easy, Comprehensive Audit Tracking

Preparing for audits, tracking down errors and monitoring data input is streamlined with a full suite of audit trail tools that can record and provide a snapshot of who uses the system, what updates they make and when they make them.

Flexible, Scalable and Customizable

Above PAR can be customized to match current and future business processes, and adapted to future or enhanced interfaces.

Improved Reporting

Create both custom and ad-hoc reports with the Above PAR reporting module. These reports provide the tools necessary to help manage costs and report performance measures; and because Above PAR is fully integrated with VistA, all existing VistA reports are still available. Above PAR custom searches on Equipment and Inventory allow easy export of items to Excel. Ad hoc reporting provides a power tool to capture data easily as needed.

Top-shelf Security

Utilizing current VistA security protocols, Above PAR allows administrators to set user-level access to fields. Administrators can control, by user type, which fields are editable and required. Administrators can also control which fields should be audited.
