

Fixed Assets

Make the most of your assets

Fixed Assets for Opera II maintains a complete register of your company's assets, helping you to stay in control of the resources your company has invested in. Avoid misappropriation and make the most of the value of your assets by managing them in the most efficient way.

Take the pain out of depreciation calculations

Fixed Assets for Opera II keeps track of your company's assets from initial acquisition through to disposal, while tracking their depreciation rates and maintaining the correct value for them. It caters for all types of assets, so you can record details of any Finance or Operating Lease and Hire Purchase or Lease Purchase assets, assets owned by your company or assets of any other type. Depreciation is automatically calculated and deducted until an asset's residual value is reached. Depreciation and disposal details to date can be recorded for assets acquired in previous periods or years.

Assets which have historically been maintained in an Excel spreadsheet can be imported into Opera II Fixed Assets via an Import routine, making it easy to import not only existing records but also any other assets in bulk, as and when required. Opera II Fixed Assets can also be linked to the Nominal Ledger, with Cost Centre and Advanced Nominal analysis, and integrates with the Purchase Ledger, Purchase Invoice Register and Purchase Order Processing so that a new asset can be created automatically when a supplier invoice is posted.

Features

- Import routine for assets previously maintained in Excel spreadsheets and for ad hoc bulk import of assets.
- Fully automated utility for upgrading from Opera Fixed Assets.
- Optional link to Nominal Ledger with Cost Centre and Advanced Nominal analysis.
- Update the Nominal Ledger with the depreciation calculation in real time.
