

FAMOCO extends its offering with two new products: FX200 and FX300

Following the worldwide success of the FX100, the first secure Android NFC device, of which more than 60,000 have been sold, FAMOCO is expanding its product range and preparing to conquer new markets.

Paris, France, 6 September 2016 - Today FAMOCO, the leader of secure Android devices, announced the launch of two new NFC readers, the FX200 and FX300, to complement the existing FX100. With strong growth internationally, FAMOCO is now present in 25 countries and has deployed more than 60,000 units in just 2 ½ years. With this new product range, FAMOCO plans to conquer new markets and equip thousands of users worldwide.

Mobile business applications are booming. Companies require secure devices that are remotely managed to protect their data and reduce operational costs. FAMOCO targets the transportation, cashless payment, logistics and access control markets to equip mobile agents. Among the main features of these two new products: The **FX200** features a 4.5 inch screen, perfect for data collection and business applications, while the **FX300** is a ruggedized device (IP67) with integrated barcode scanner.

The two new devices open FAMOCO to new markets. The FX300 specifically targets transportation and logistics, while the versatility of the FX200 means it can be used to equip mobile workers in the fields of hospitality and home care services, as well as field service technicians.

"The success of the FX100 has confirmed the need for dedicated and secure Android devices." said Lionel Baraban, Co-Founder and CEO, FAMOCO. "We decided to expand our range to best meet the needs of our clients, which will in turn allow us to target the transportation and logistics markets and equip their mobile workers."

The FAMOCO devices are the only ones available on the market that integrate smart card security coupled with a secure version of Android. This ensures data integrity and protects against viruses and attacks which are increasingly common on Android. The devices are managed remotely through a SaaS platform for easy deployment and simplified operational management.

FX200:

The FX200 features a large 4.5-inch screen. It is perfectly suited to employees who use business applications that require significant amounts of data to be entered. With its slim design, it weighs only 137g. The Dual-SIM equipped terminal also includes NFC, Bluetooth, GPS, WiFi, 2G and 3G connections and an external SAM (Secure Access Module) to secure sensitive data.

FX300:

The FX300 is a ruggedized device that integrates a barcode scanner and NFC antenna. Its sturdy format and easy grip has been designed for continuous use by field workers. The FX300 is light for its category weighing just 260g. The device is perfectly adapted to the logistics market and transportation industry and has been chosen by a prominent European rail network to equip controllers.

About FAMOCO:

FAMOCO is the leader of professional Android devices. Established in 2010 and certified Pass French Tech, FAMOCO targets the transportation, cashless payment, logistics and access control markets to equip mobile agents.

With their range of secure and remotely managed devices, FAMOCO has developed the first Android business-ready solution that can be adapted to all needs and markets.

Today FAMOCO is expanding worldwide and has deployed more than 60,000 devices in over 25 countries in just 2 ½ years. Among its customers it counts prestigious companies such as Google, Gemalto, Orange, Accor Group and Airtel. FAMOCO has 4 offices worldwide: Paris, Brussels, New Delhi and Hong Kong.
