Tasks

- Administer prescribed medications or start intravenous fluids, and note times and amounts on patients' charts.
- Observe patients, charting and reporting changes in patients' conditions, such as adverse reactions to medication or treatment, and taking any necessary action.
- Provide basic patient care and treatments, such as taking temperatures or blood pressures, dressing wounds, treating bedsores, giving enemas or douches, rubbing with alcohol, massaging, or performing catheterizations.
- Sterilize equipment and supplies, using germicides, sterilizer, or autoclave.
- Answer patients' calls and determine how to assist them.
- Measure and record patients' vital signs, such as height, weight, temperature, blood pressure, pulse and respiration.

- Work as part of a health care team to assess patient needs, plan and modify care and implement interventions.
- Collect samples such as blood, urine and sputum from patients, and perform routine laboratory tests on samples.
- Prepare patients for examinations, tests or treatments and explain procedures.
- Assemble and use equipment such as catheters, tracheotomy tubes, and oxygen suppliers.
