FULTON COUNTY ENGINEER'S OFFICE SUPPLEMENTAL SPECIFICATIONS

Except as modified by these plans and by the detailed specifications pertaining thereto, all work shall be governed by the Fulton County construction standards and by the State of Ohio Department of Transportation, "Construction and Material Specifications" dated January 1, 2008 and supplements, including but not limited to supplemental specifications, supplements and proposal notes, thereto in effect fourteen (14) calendar days prior to receiving bids.

DEFINITIONS: All references to **LABORATORY**, used in these supplemental specifications, shall mean a currently inspected **American Material Research Laboratory (AMRL)** testing laboratory capable of performing the mix designs in accordance with this supplemental specification.

ITEM 202 – PAVEMENT REMOVAL

Pertinent sections of **202 PAVEMENT REMOVAL** apply including or in addition to the following:

1. A milled butt joint shall be provided where new pavements meet existing pavements and bridge decks. These areas shall be established by the **ENGINEER** and provided in accordance with ODOT standard construction drawing BP 3.1. Milled materials may be used for placement along berm areas.
2. Residential driveway approaches that are either concrete or asphalt will also be required to have a milled or saw cut butt joint. Asphalt for these approaches has been included under the appropriate line item, along with an additional line item for the removal of the existing material.

ITEM 203 - ROADWAY EXCAVATION AND EMBANKMENT

This work shall consist of all excavation and embankment as directed by the **ENGINEER** in the attached set of roadway construction plans.

The **CONTRACTOR** shall be responsible for the disposal of any and all excessive and unsuitable excavated material.

ITEM 448 – ASPHALT CONCRETE

Pertinent sections of **401 FLEXIBLE PAVEMENTS** apply including or in addition to the following:

1. All pavers will be equipped with an automatic joint maker, which shall be used in making longitudinal joints. Longitudinal joints will be staggered between courses. The longitudinal joint of the surface course shall be at the center of the specified pavement width. Material shall be placed to provide 1/4 inch/foot crown and to level longitudinal deficiencies with a forty-foot (40') automatically controlled leveling ski for pavements equal to and greater than 20 feet in width.
2. Asphalt will be bid and paid for on a cubic yard basis. All quantity in excess of the contract amount shall be at the **CONTRACTOR's** expense unless otherwise authorized by the **ENGINEER**.
3. In the event of rain during laying operations, only those loaded trucks in route immediately after the rain has started will be permitted to unload, provided the surface to be paved was sufficiently tacked prior to the rain and that paving operations do not proceed through standing water.
4. No material will be laid on a wet surface or when the air temperature is less than 40 degrees.
5. Traffic will not be permitted on the asphalt until it has cured sufficiently that no marking shall appear.
6. All existing driveways and mailbox approaches will be immediately restored following daily paving operations. In the event that paving is interrupted over several days it will be the responsibility of the **CONTRACTOR** to attend to these areas on a daily basis, if necessary, allowing the residents safe use of their approaches.

JOB MIX FORMULA - ASPHALT CEMENT SUBMITTAL

The Job Mix Formula (JMF) for each asphalt concrete mixture specified herein shall be developed by the **CONTRACTOR** and submitted to the **ENGINEER** for approval prior to the start of production. In addition, the **CONTRACTOR** shall provide certified test results indicating that the asphalt cement to be used conforms to the attached specifications for asphalt cement. A separate JMF and certification of asphalt cement test results shall be submitted for each aggregate and/or asphalt cement source to be used in the project. During production of the mixture, the **CONTRACTOR** shall perform quality control procedures adequate to furnish assurance to the **ENGINEER** that the mixture delivered to the paving site is in reasonable conformance with specification requirements and can be incorporated in the work with satisfactory results.

One copy of the plant ticket shall accompany each load delivered to the paver and shall be presented to the **ENGINEER**. The total of the weights recorded on the plant tickets for each mixture furnished shall be converted to

cubic yards for payment using the conversion factor established by the **CONTRACTOR** for each asphalt concrete mixture submitted to the **ENGINEER** for approval.

ITEM 407 - TACK COAT

Before placement of asphalt concrete, the **CONTRACTOR** shall apply a **TACK COAT** onto each intermediate course. Sufficient material has been provided in the estimate to cover the entire area of each paving course with **TACK COAT** at the rate of 0.10 gallon per square yard. The **ENGINEER** shall determine the final area requiring tack treatment together with the rate of application at the time of construction. Final payment quantity will be based upon the actual amount of bituminous material applied.

ITEM 614 - MAINTAINING TRAFFIC

1. Local traffic only shall be maintained for access to and from local home sites.
2. Lights, signs, barricades and drums shall be provided by the **CONTRACTOR** and placed in accordance with the latest edition of the Ohio Manual of Uniform Traffic Control Devices. Maintaining Traffic in accordance with the above provisions shall be included for payment in the lump sum for Item 614, Maintaining Traffic.
3. The **CONTRACTOR** shall install temporary centerline marking on the wearing course. In the event that the intermediate course and the wearing course are not going to be placed consecutively, the **CONTRACTOR** shall also place the temporary centerline marking on the intermediate course. Approved material for the temporary centerline shall be retroreflective pavement marking tape one (1) to one and one half (1.5) feet in length and at a maximum spacing of fifty (50) feet. Payment for the temporary centerline striping shall be included in the lump sum price for Item 614, Maintaining Traffic.
4. The **CONTRACTOR** is responsible for contacting and keeping informed, the Fulton County Sheriff and all affected school districts during the entire project.
5. The **CONTRACTOR** shall notify the **ENGINEER** in writing seven working days prior to the closing of County Road D.
6. Fulton County will be responsible for establishing, maintaining and signing detour routes.

ITEM 617 – RECONDITIONING OF SHOULDERS

1. Shoulder reconditioning shall begin as soon as the new pavement is able to allow berming equipment to operate without damaging the new surface.
2. Approved Material for this item shall be O.D.O.T. Item 411.
3. Lights, signs, and barricades shall be placed and maintained until berming has been completed. All shoulder reconditioning shall be completed before the road is opened to traffic other than local traffic. Where any pavement course results in a drop-off of 2.0 inches or greater; reflective barrels, 18-inch reflective traffic cones, or reflective delineators shall be provided and maintained by the **CONTRACTOR** until such time as shoulder reconditioning operations have been satisfactorily completed. In the event that shoulder reconditioning is not caught up and/or drop-offs are left unprotected, paving operations will be halted until such time as shoulders are adequately reconditioned.

TENSAR GEOGRID SPECIFICATIONS

A minimum loose fill thickness of 6 inches is required prior to operation of tracked vehicles over the geogrid. Turning of tracked vehicles should be kept to a minimum to prevent tracks from displacing the fill and damaging the geogrid. Rubber-tired equipment shall not be allowed directly on the geogrid. Sudden braking and sharp turning movements shall be avoided.

All geogrid material required will be delivered to the site by the Fulton County Engineer.

TESTING FOR QUALITY CONTROL

An independent testing laboratory may be retained to insure quality control on the entire project. Should any retesting be required to settle disputes, such testing will be at the **CONTRACTOR's** expense.

UNDERGROUND UTILITIES

Prior to any construction activity, the **CONTRACTOR** shall contact the Ohio Utility Protection Service (OUPS) at 1-800-362-2764.

CONTROL POINTS

Before actual construction operations begin, the **ENGINEER** will reference all existing monuments, railroad spikes, iron bolts, etc. in the survey line. Upon completion of the pavement surfacing, the **ENGINEER** will reestablish all control points in the new pavement.

PROTECTION AND RESTORATION OF PROPERTY AND LANDSCAPE

The **CONTRACTOR** shall be responsible for the preservation of all public and private property, and shall protect carefully from disturbance or damage all land monuments and property markers until the **ENGINEER** has witnessed or otherwise referenced their location and shall not move them until directed.

LOAD RESTRICTIONS

The **CONTRACTOR** shall comply with all legal load restrictions in the hauling of materials on public roads beyond the limits of the work. The operation of equipment of such weight as to cause damage to structures or to any other type of construction will not be permitted. Hauling of materials over the base course or surface course under construction shall be limited as directed by the **ENGINEER**. The **CONTRACTOR** shall be responsible for all damage done by his hauling equipment and shall correct such damage at his own expense.

SUBMITTALS

Within 45 days from the date of the Notice to Proceed, the **CONTRACTOR** shall submit, to the **ENGINEER**, all required submittals, including but not limited to: material supplier(s), material specifications, shop drawing(s), sub-contractor(s) list, and project progress schedule. The **CONTRACTOR** will not be eligible for a contract time extension due to his failure to submit the required submittals in a timely manner. As a courtesy, the **ENGINEER** may provide each **CONTRACTOR** a list of required submittals for reference. The completeness of this list, however, is not guaranteed and it shall be the responsibility of the **CONTRACTOR** to verify its completeness.

The **CONTRACTOR** shall, in writing, inform the **ENGINEER** of all submittals that deviate from the requirements of the Contract Documents. Submittals that are part of a system shall be made as a fully integrated submittal that will enable the **ENGINEER** to verify compliance with the Contract Documents.

The submittal(s) shall clearly identify the project name and shall be complete with respect to dimensions, materials of construction, the name and address of the manufacturer and local supplier, and pertinent catalog numbers. The

information shall include enough detail to permit the **ENGINEER** to verify compliance with the Contract Documents and the design intent.

The **CONTRACTOR** shall submit enough copies of all submittals to allow the **ENGINEER** to retain up to two (2) copies of each submittal.

The **CONTRACTOR's** stamp of certification and signature shall be required on all copies of every submittal made to the **ENGINEER**. The stamp of certification shall constitute a representation to the **ENGINEER** that the **CONTRACTOR** has determined and verified all quantities, dimensions, field construction criteria, materials, catalog numbers, and similar data, or assumes full responsibility of doing so, and that the **CONTRACTOR** has reviewed and coordinated each shop drawing and sample with the requirements of the Contract Documents.

The **ENGINEER** will review and act with reasonable promptness upon shop drawings and samples, but this review and action shall be only for the conformance with the design concept of the project and for compliance with the information given in the Contract Documents, and shall not extend to means, methods, sequences, techniques or procedures of construction, or to safety precautions or programs incident to such factors. The review of and action upon a separate item will not indicate acceptance of the assembly in which the item functions.

The approval of the **CONTRACTOR's** submittals is for general conformance to the Contract Documents, but subject to the detailed requirements of the Contract Documents. Such review by the **ENGINEER** shall not relieve the **CONTRACTOR** of his responsibility for the accuracy, proper fit, functioning or performance of any phase of the work included in the Contract Documents.

If the **ENGINEER** rejects a submittal as non-compliant with the Contract Documents, or if insufficient information has been provided to determine compliance, the **CONTRACTOR** shall make a re-submittal which complies with the Contract Documents or provides additional information as required. Re-submittals shall be clearly identified by the **CONTRACTOR** as such and all changes from the previous submittal shall be plainly evident through the use of conventional revision symbols, or an equally effective method.

COMPLETION DATE AND REMOVAL OF EQUIPMENT

All work shall be completed in its entirety and equipment removed from the site as per the schedule set by the construction manager for the Pettisville Local School District project. A tentative starting date for this work is October 26, 2009 with a completion date of November 9, 2009.

For laborers working in an exclusive or "hot" area with toxic or hazardous materials, one of the following personal protective equipment ensembles will be required for necessary protection against toxic contaminants.

Level A Full work clothes to normal skin protection such as gloves, face shields, goggles, coveralls and occasionally respiratory protection.

Level B Protective equipment includes a protective suit and an Air Purifying Respirator (APR) with the appropriate filter canisters. The ensemble is used when the contaminants are reliably known not to be hazardous to the skin and not IDLH (Immediately Dangerous to Life or Health) and correct filter protection is available. This ensemble offers adequate protection for many jobs

Level C Protective equipment includes a chemically resistant splash suit and SCBA or Airline Respirator. This ensemble is required when the situation is very hazardous such as oxygen deficient atmospheres, IDLH atmospheres, or confined space entries, and the risk of skin exposure is not as great as in Level D situations

Level D Protective equipment is required when the area has been determined to contain extremely toxic contaminants of combinations unknown but may be expected to be extremely toxic and/or immediately Dangerous to Life and Health (IDLH). This ensemble includes a full encapsulated chemical suit (GAS-Combined Breathing Apparatus (SUBA), or Airline Fed Respirator, and various types and numbers of boots and gloves; cool vests and vapor-activated matrics are optional equipment sometimes worn. This level places the greatest physical and mental stress on the worker

Groups 7-10 is all work related to the track, transportation, installation and servicing of doors and gates of any type and all items related to doors and gates such preparation of any openings, passageways and/or access areas where a door and/or gate will be installed, opened, closing doors, horizontally sliding doors, rapid roll doors, overhead chain gates, sliding grills, air doors, fire doors, sliding doors and any other doors and/or gates which are used to gain access to or prevent access to any area, enclosed or otherwise. Any suit and fall devices and/or items used to operate or close doors.
