Sample Information

GASOLINE ONLY - GASOLINE ONLY SAMPLE KIT. DO NOT SHIP ANY OTHER FLUID IN THIS KIT.

Fuel Sample Packing Instructions: Kit # J-50097-FUEL

Important: Please complete training prior to using this kit. See reverse side for information.

1. Carefully fill each fuel sample bottle. Use a funnel if necessary. Do not contaminate or the tests may be invalid. Fill each 30 ml bottle no more than 90% full. Note the "Max Fill" Line on the label. (Headspace allows for expansion of the fuel.)

2. Ensure that the cap is **closed firmly**. Hand-tight is sufficient. Do not use a wrench to tighten. Peel and Apply the sealing tape (provided) around the circumference of the cap. Wipe the outside of the bottle to ensure that it's free of residue.

3. Re-roll all three filled sample bottles back into the absorbent towel, place into the first plastic bag, and seal securely.

4. Re-insert into the second plastic bag, along with the second absorbent towel, and seal securely.

5. Place **upright** into the cardboard box. Complete the form on the reverse side of this sheet and place in the box.

6. Seal the box shut with the clear tape. Ensure that the pre-printed, pre-applied "E-label" (Excepted Quantities label) is not damaged or obscured in any way.

7. Deliver the package to a FedEx carrier only.
