## Math Lab: Graphing Quadratic Equations in Standard Form

## What are the characteristics of the parent graph of a quadratic function?

Complete the table and plot the points to sketch the graph of $\boldsymbol{y}=\boldsymbol{x}^{2}$.

| $x$ | $y$ |
| :---: | :---: |
| -3 |  |
| -2 |  |
| -1 |  |
| 0 |  |
| 1 |  |
| 2 |  |
| 3 |  |

The shape of a quadratic function is called a
$\qquad$ .

The highest or lowest point on the curve is the
$\qquad$ .

The $\qquad$ is the
vertical line passing through the vertex.

What does $a$ tell you about the graph of $y=a x^{2}+b x+c$ ?
Graph each of the equations in a graphing calculator to complete the information in the table below.

| Equation | Positive or <br> negative $a \boldsymbol{?}$ | Does the graph <br> open up or down? | $\|\boldsymbol{a}\|$ | Is the graph wider or <br> narrower than $\boldsymbol{y}=\boldsymbol{x}^{2} ?$ |
| :---: | :---: | :---: | :---: | :---: |
| $y=7 x^{2}$ |  |  |  |  |
| $y=\frac{1}{2} x^{2}$ |  |  |  |  |
| $y=-\frac{1}{6} x^{2}$ |  |  |  |  |
| $y=-\frac{3}{2} x^{2}$ |  |  |  |  |

- When $a$ is positive, the parabola $\qquad$ .
- When $a$ is negative, the parabola $\qquad$ .
- When $|a|<1$, the graph $\qquad$ and the slope from the vertex to the next point is $a$.
- When $|a|>1$, the graph $\qquad$ and the slope from the vertex to the next point is $a$.

What do $a$ and $b$ tell you about the graph of $y=a x^{2}+b x+c$ ?
Graph each of the equations in a graphing calculator to complete the information in the table below. Use the MAX or MIN option in the CALC menu to find the coordinates of the vertex.

| Equation | Coordinates <br> of the vertex | $-\frac{\boldsymbol{b}}{2 \boldsymbol{a}}$ <br> (Show your work.) | Substitute $-\frac{\boldsymbol{b}}{2 \boldsymbol{a}}$ in for $\mathbf{x}$ to find $\mathbf{y .}$ <br> (Show your work.) |
| :---: | :---: | :---: | :---: |
| $y=x^{2}+2 x+1$ |  |  |  |
| $y=-x^{2}-2 x-1$ |  |  |  |
| $y=-4 x^{2}+8 x+2$ |  |  |  |
| $y=2 x^{2}-8 x+6$ |  |  |  |
| $y=3 x^{2}-18 x+20$ |  |  |  |

- The equation $x=-\frac{b}{2 a}$ is the $\qquad$ of the graph.
- To find the vertex,

What does $c$ tell you about the graph of $y=a x^{2}+b x+c$ ?
Graph each of the equations in a graphing calculator to complete the information in the table below.

| Equation | What is the <br> $\mathbf{y}$-intercept? |
| :---: | :---: |
| $y=x^{2}+3$ |  |
| $y=2 x^{2}+5$ |  |
| $y=-2 x^{2}+4$ |  |
| $y=x^{2}+3 x+2$ |  |
| $y=-x^{2}-2 x+1$ |  |
