*Employee Time Card Application*

operators manual

**SYSTEMS DESIGN**  
FOOD SERVICE MANAGEMENT SYSTEMS  
CORPUS CHRISTI, TEXAS

### Welcome to the Systems Design Employee Time Card Application

This program is designed to function as program to capture the hours worked by employees in the food service department of public school districts. It may also be used by other hourly employees of the school district with slight modifications and procedural changes.

The program replaces the requirement for the manual recording of time worked by permitting the employee to clock in on the same terminals as are used by the point of sale programs. Employees may use a printed and bar coded ID card or they may enter the designated employee number on the terminals key pad. Regardless of the method of entry— the time is recorded in an accurate fashion because there are no manual entries, all time entries are recorded by the computer.

Accurate and uniform time is facilitated because the time clocked in and out data is captured at the central server. All employees, regardless of location, are essentially using the same time clock. There is only one time standard used by all employees of the district. Since the time is recorded at one central location regardless of where the employee records their time, they can clock in at one campus and clock out at another and the time will still be recorded accurately.

Employee time may be edited or changed at the central office at the direction of the food service office staff. Someone may forget to clock in or out in which case the correction entries may be made in a very simple operation. The program accommodates pay for various non work days such as sick days, jury duty, personal days, vacation pay, and many others as may directed by the district.

Overtime hours are accommodated and are calculated base on the method and hours directed by the policy of the district.

The management of time and hours worked are simplified by the program in that there are numerous reports available to the department. These reports are, of course, illustrated and explained in this manual. Sorting of data, by employee, by campus, by department, and other sorts make the presentation and interpretation of the time card data useful and meaningful to those responsible for the collection and reporting of time data to the payroll department of the district.

One should note that this program is a time capture application and is indeed separate from the payroll computation and payroll check writing that is done by the district administration. It is designed, as stated, to automate the collection and to enhance the accuracy of employee hours worked that is reported to the district.

Systems Design is confident that the Employee Time Card Application will be an asset to the food service department of your school district. The program should assist in the more timely and accurate reporting of all employee time data.

Systems Design uses certain standard conventions in all applications

This means that some key strokes and answers to questions presented on the screen are repetitive and are used in the pathways to different functions and programs within the applications. Some of those are listed below. The understanding of these conventions will speed up the understanding of elements of this manual.

When asked for the district number it will be 01 unless there are multiple districts operating on the same central server. Some systems do not present this option.

the cursor blinks in the block  
ENTER MENU OPTION (            )  
which is the prompt for the operator to enter the appropriate selection of programs. If the selection has an = sign it may be selected.

Most of the time the operator will be presented with a selection of  
ALL OK (Y,N,C) or  
ARE YOU SURE (Y,N)  
which gives one the opportunity to indicate Y for yes( accept the entry, N for no (go back and re-enter data) at which time it will take you to the indicated field, or C for cancel (everything goes away)

Most selections present a subsequent sequence of options which are generally are sorts that are available to the operator either in the way that screens will call up data or in the way that data will be printed. This manual may not list all sort available but they are easily understood in a logical process as the various selections are made.

One will notice that the 99=RETURN TO PREVIOUS MENU prompt appears on most screens. 99 is the escape entry and is also used when the programs as for the district number when the operator wishes to return to the previous menu.

When printing options are selected the printer number will be asked for and it should be remembered that in a real time system that print jobs may be sent to any printer attached to the system. Care should be exercised in selecting a printer. Once the printer is selected and the print job sent, then the screen will return to the menu from which selected and a brief message "end of listing" will appear on the screen.

A menu driven system is very easy and logical to operate. One may just read the present screen to determine what operation to select. If the desired operation is not displayed then the entry 99 will return to the previous menu where the search for the desired operation may be found.

Explore the system. It's the best way to learn. You will be given the opportunity to cancel any operation or entry that you do not wish to affect.

operators log onto the Systems Design Food Service program in the usual manner using the back office password.

the operator will then be at the Master Menu

These are the elements of the employee masterfile.  
Explanations of each field will be found on the next page

Employee Time Card Application

Explanations of the various masterfile fields

the first prompt is for the employee number—if you enter an existing number then the data will be called —if you enter a number not in the data base you will be asked if you wish to enter a new employee

- 01= last name
- 02= first name
- 03= middle name
- 04= address
- 05= city and state
- 06= zip code
- 07= phone number
- 08= social security number
- 09= district employee number
- 10= campus ID number – this is a four digit campus number or a number above 800 that will indicate an activity such as catering or other activity that will be separated from the primary work.
- 11= department – the normal department will be FS (food service) you may have others for maintenance, custodial, etc.
- 12= current status – clocked in (I) or out (O).
- 13= active? - enter Y for active and N for not active.
- 14= lunch flag – enter a Y if the employee has to manually clock out-leave blank and the system will deduct the amount of time in field 28
- 15= temp employee – Y if a part time or N if a full time employee.
- 16= work cycle – enter D for daily, W for weekly, or M for monthly-most entries are for W weekly because of overtime calculations.
- 17= Dock YTD hours – manual entries for hours docked during the year.
- 18= allowable hours – hours normally worked during the work cycle as indicated in 16-any hours over this will be overtime.
- 19= hours date –the date that the hours were set-entered from system.

- 20= sick allow – allowable sick hours-a manual entry-system does not track.
- 21= vac allows – allowable vacation time-a manual entry-system does not track.
- 22= sick accum – accumulated sick hours-manual entry-system does not track.
- 23= vac accum – accumulate d vacation hours-manual entry system does not track.
- 24= primary rate – the primary hourly rate of pay-also overtime computed at 1 1/2 times this rate.
- 25= rate change date – the date this pay rate is effective-entered by system.
- 26= secondary rate – the rate paid for an activity other than the primary job.
- 27= rate change date – the date this pay rate is effective-entered by the system.
- 28= lunch allowed – this is the time stated in minutes that the employee may take for lunch-this is only entered if an N is placed in field 14.
- 29= OT threshold – the number of hours that must be worked per work cycle before and at which time the system will begin accumulating overtime hours and calculate expense at 1 1/2 times the primary rate of pay.

Note: The masterfile controls most of the computations that affect the collection and manipulation of time card data. Periodic reviews for accuracy of employee records should be ac-

Employee Time Card Application

There are times when an employee forgets to clock in or out or when they forget and clock in or out at a time other than when they actually worked. The back office operator may change or edit the recorded entries in this program.

The program assigns a transaction code to each clock in or clock out. The first time an employee clocks in during the day will result in a transaction code of 10, clock out for lunch 20, clock back in 30, clock out to go home 40, and so on. One may have many clock in's and clock out's during the day. You may notice that there should be a final clock out code containing an even number.

When entering this program the operator is given the choice of the following:

- A-ADD – permits the adding of a new time sequence
- C-CHANGE – lets the operator change an existing entry
- D-DELETE – one may delete the entire entry
- I-INQUIRY – lets the operator view a list of clock ins and clock outs by a date range.
- E-RETURN TO DISTRICT OPTION – returns the operator to the previous menu.

The various entries are as follows:

- EMPLOYEE NO= enter the applicable employee number.
- TRANS DATE= enter the date you wish to effect
- SEQ NUMBER= enter the sequence number, ie 10, 20, 30, 40, etc as explained above
- 01= HOUR – the hour effected in military time
- 02= MINUTES – minutes
- 03= TYPE – I for in and O for out
- 04= LOCATION CODE – the campus to which assigned or at which work is performed.
- 05= LUNCH FLAG – Y if they manually clock in and out for lunch-blank otherwise.
