

Residential Job-Site Readiness Release Form

Establishing new gas service is an important step in your new construction project. You can help us keep your project on schedule by familiarizing yourself with our policies for new residential gas customers.

If you are converting from other energy sources, you must check the box below to confirm that your site is ready for gas installation.

- The requested service installation is for conversion from propane, fuel oil, or electric, and all private (non-utility owned) underground facilities are clearly marked, and potential obstructions have been cleared.

If your project is new construction, you must check all the boxes below to confirm that your construction site is ready for gas installation.

- Any private (non-utility-owned) underground facilities are clearly marked, including wells, cisterns, water lines, sprinkler systems, sewer lines, septic tank lines and laterals, drain lines, drainage tiles, and any other customer underground facilities.
- This lot is within +/- 4 inches of final grade along path of service.
- This site is accessible by utility vehicles and equipment.
- All potential obstructions have been cleared including structures, construction materials, dumpsters, fences, vehicles, snow piles, dirt piles, and bushes and trees along path of installation.
- Status of construction is at minimum a backfilled foundation.
- Any other requirements Nicor has identified have been completed.

Date:		Builder Name:		
Contact Name:		Contact Number:		
Subdivision Name:				
Jobsite Address	Town	Construction Status: foundation, shell, under roof, or drywall	Construction Due Date	Comments

Failure to comply can impact your gas installation timeframe
