Note:

1. In situation where the package size stated on a license exceeds the maximum package size, then, with the central health competent authority's pre-approval,

manufactures can continue using the existing licences without the obligation to file a post-approval change.

2. As long as the maximum package size is observed, manufacturers may adjust package sizes to satisfy market demands without the need to apply for post approval changes. However, if the package size goes over the limit, an application of post approval change shall be filed with the submission of the purchase orders made by health care providers or academic groups.
3. As a principle, the common minimum package size is the minimum two-day dose for an adult.
4. Liquid preparation shall not be packed in pop cans / bottles.
5. Oral liquid should be packed in the dose for an adult's single use. The unit package size should be under 100ml.
6. The unit package size of peritoneal dialysis solution should be under 5000ml.
7. In principle, suspension and gel in aluminium foil or plastic pouches should be in the dose of a single use.
8. Licences should clearly indicate whether a cannula or an infusion set is provided with an injection product. Manufacturers shall also submit 40 sets of cannulas or infusions sets and their specifications to the health authority for examination. If the cannulas or infusion sets have been licensed, then their license numbers should be specified and no further testing is required.
9. The unit package size of total parenteral nutrition should be under 1400ml.
10. The minimum package size of API is 0.5kg. But, for those only a small quantity is used, the minimum package size is the quantity for manufacturing 100,000 tablets, 100,000 injections, 100,000 ointment tubes or 100,000g drugs.
11. The maximum package size of eye wash is 500ml.
12. For syrup containing codeine that is categorized as an instruction drug, three-day dose is the maximum package size.
13. Tablets and capsules containing ephedrine or pseudoephedrine can only be in boxed aluminium foil pack. For instruction drugs, the maximum package size is 7-day doses for an adult. Regulations stated in notes 1 and 2 are not applicable.
14. The package size of drugs for cold, pain relief and coughing liquid is between 4000ml and one single dose for an adult.
