Model Nomenclature

Definitions

ABBREVIATIONS AND DEFINITIONS:

CFM = airflow, cubic feet/minute HE = total heat of extraction, MBTUH EWT = entering water temperature, Fahrenheit HW = desuperheater capacity, MBTUH GPM = water flow in gallons/minute EER = Energy Efficient Ratio WPD = water pressure drop, PSI and feet of water = BTU output/Watt input EAT = entering air temperature, Fahrenheit COP = Coefficient of Performance (dry bulb/wet bulb) = BTU output/BTU input HC LWT = leaving water temperature, °F = air heating capacity, MBTUH TC = total cooling capacity, MBTUH LAT = leaving air temperature, °F = total heating capacity, MBTUH SC = sensible cooling capacity, MBTUH TH = total power unit input, kilowatts = latent cooling capacity, MBTUH KW LC = total heat of rejection, MBTUH S/T = sensible to total cooling ratio

VERSATEC CONTROL - EH & REMOTE WALL THERMOSTAT Legend for Schematic [A]

Normal Control Timing Table

Blower off delay	30 seconds
Compressor on delay	10 seconds
Short cycle delay	5 minutes
Minimum compressor on time	60 seconds (except for fault condition)
High pressure fault recognition delay	Less than 1 second
Low pressure fault recognition delay	30 seconds
Freeze sensing fault recognition delay	30 seconds
Condensate overflow fault recognition delay	30 seconds
Low pressure fault bypass delay	2 minutes
Freeze sensing fault bypass delay	2 minutes
Motorized valve delay	90 seconds
Random start delay	0 - 25 seconds

Test Control Timing Table

Blower off delay	5 seconds
Compressor on delay	2 seconds
Short cycle delay	15 seconds
Minimum compressor on time	5 seconds (except for fault condition)
High pressure fault recognition delay	Less than 1 second
Low pressure fault recognition delay	30 seconds
Freeze sensing fault recognition delay	30 seconds
Condensate overflow fault recognition delay	30 seconds
Low pressure fault bypass delay	0 seconds
Freeze sensing fault bypass delay	0 seconds
Motorized valve delay	90 seconds
Random start delay	0 seconds

LED Display Mode Table

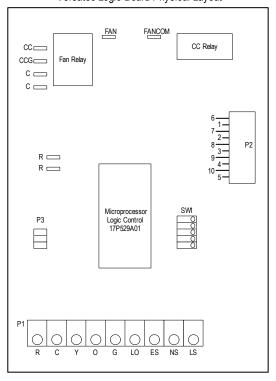

LED	Normal Display Mode
	SW1 - #4 On, SW2 Off
Drain	Drain pan overflow lockout
Water Flow	FS thermistor (loop <15°F, well <30°F) lockout
High Press	High pressure >600 PSI lockout
Low Press	Low pressure < 40 PSI lockout
Air Flow	Not used
Status	Microprocessor malfunction*
DHW Limit	Not Used
HWD	SW2 status (Off = down position, On = up position)

Diagnostic Modes								
LED	Current Fault Status	Inputs	Outputs					
	SW1-#4 On, SW2 On	SW1-#4 Off, SW2 Off	SW1-#4 Off, SW2 On					
Drain	Drain pan overflow	Y	Compressor					
Water Flow	FS thermistor (loop <15°F, well <30°F)	G	FAN					
High Press	High pressure > 600 PSI	0	0					
Low Press	Low pressure < 40 PSI	ES	ES					
Air Flow	Not used	NS	NS					
Status	Not used	LS	LS					
DHW Limit	Not used	Not Used	Not Used					
HWD	SW2 in the On position	Off position	On position					

^{*}Flashing Status light indicates microprocessor is functioning properly Solid "on" indicates a microprocessor malfunction.

208-230-265/60/1

Versatec Logic Board Physical Layout

Logic Board DIP Switch Settings

Switch	OFF	ON
SW1 - 1	Test - Selected timings sped up to facilitate troubleshooting	Normal - Standard timings
SW1 - 2	Loop - Closed loop freeze sensing setting (15°F)	Well - Open loop freeze sensing setting (30°F)
SW1 - 3	Enables NS features	Normal - Standard thermostat operation
SW1-4	IO Display * - Enables Input/Output display on external LED board*	Normal * - Unit status display
SW1 - 5	Motorized Valve - 1.5 minute compressor on delay	Normal - Standard delay on call from compressor used
SW2	OFF * - Normal or Input display mode activated	ON * - Current fault or Output display mode activated

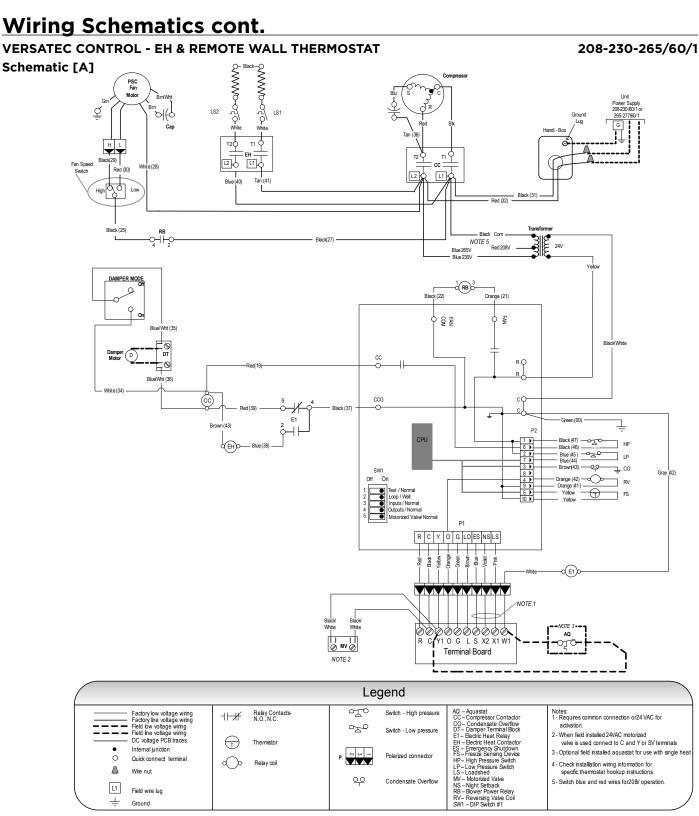

^{*}Refer to LED Display Mode table for position of SW1-4 and SW2

Operational Logic Table

Mode	Inputs	Fan	Comp	RV
Htg	Y	ON	ON	OFF

Engineering Guide Specifications

General

Furnish and install WaterFurnace Water Source Heat Pumps, as indicated on the plans. Equipment shall be completely assembled, piped and internally wired. Chassis shall be installed with factory built cabinet or other custom cabinet approved by WaterFurnace engineering. Chassis SHALL NOT be installed without an approved cabinet enclosure. Capacities and characteristics as listed in the schedule and the specifications that follow. The reverse cycle heating/ cooling units shall be floor mounted console type with horizontal air inlet and up-flow air discharge. Units shall be ARI/ ISO 13256-1 certified and listed by a nationally recognized safety-testing laboratory or agency, such as ETL Testing Laboratory. Each unit shall be computer run-tested at the factory with conditioned water and operation verified to catalog data. Each unit shall be mounted on a pallet and shipped in a corrugated box or stretch-wrapped. The units shall be designed to operate with entering liquid temperature between 20°F and 120°F [-6.7°C and 48.9°C].

Chassis & Cabinet

The cabinet shall be fabricated from heavy-gauge galvanized steel and finished with a beige textured epoxy powder coating on both sides for added protection. This corrosion protection system shall meet the stringent 1000 hour salt spray test per ASTM B117.

The cabinet shall be easily removable to allow for ease of service to the controls compartment, chassis, and piping. The top of the cabinet and grille is a horizontally flat (optional sloped) surface with a hinged control door cover. The return air filter shall be 1" (25.4 mm) fiberglass disposable type media.

The return and supply air sections are insulated with a 1/4" (6.4 mm) thick, dual density, 2 lb/ft3 (32 kg/m3) coated mat glass fiber with edges sealed or tucked under flanges to prevent the introduction of glass fibers into the discharge supply air through the aluminum grille. Standard cabinet panel insulation must meet NFPA 90A requirements, air erosion and mold growth limits of UL-181, stringent fungal resistance test per ASTM-C1071 and ASTM G21, and shall meet zero level bacteria growth per ASTM G22. Unit insulation must meet these stringent requirements or unit(s) will not be accepted.

Option: A Super Quiet Sound package shall include multidensity full coverage compressor blanket.

Option: Shipped with motorized outside air damper and damper assembly for 25% make-up air.

The drain pan shall be of stainless steel construction to inhibit corrosion and bacterial growth. Drain outlet shall be located on pan as to allow complete and unobstructed drainage of condensate. The unit as standard will be supplied with solid-state electronic condensate overflow protection with microprocessor or FX10 option. Mechanical float switches WILL NOT be accepted. Condensate tube shall be constructed of stainless steel and have an internal factory installed condensate trap.

Refrigerant Circuit

All units shall utilize the non-ozone depleting and low global warming potential refrigerant R410A. All units shall contain a sealed refrigerant circuit including a hermetic motor-compressor, bi-directional thermostatic expansion valve, finned tube air-to-refrigerant heat exchanger, reversing valve, co-axial tube water-to-refrigerant heat exchanger, and service ports.

Compressors shall be high-efficiency single speed rotary type designed for heat pump duty and mounted on durometer grommets to provide vibration free compressor mounting. Compressor motors shall be single-phase PSC with external overload protection.

The air coil shall be sized for low-face velocity and constructed of lanced aluminum fins bonded to rifled copper tubes in a staggered pattern not less than three rows deep for enhanced performance.

Option: FormiShieldTM air coil coating for maximum protection against formicary corrosion.

The coaxial water-to-refrigerant heat exchanger shall be designed for low water pressure drop and constructed of a convoluted copper (cupronickel option) inner tube and a steel outer tube. Refrigerant to air heat exchangers shall utilize enhanced corrugated lanced aluminum fins and rifled copper tube construction rated to withstand 600 PSIG (4135 kPa) refrigerant working pressure. Refrigerant to water heat exchangers shall be of copper inner water tube and steel refrigerant outer tube design, rated to withstand 600 PSIG (4135 kPa) working refrigerant pressure and 450 PSIG (3101 kPa) working water pressure. The thermostatic expansion valve shall provide proper superheat over the entire liquid temperature range with minimal "hunting." The valve shall operate bi-directionally without the use of check valves.

Engineering Guide Specifications cont.

Option: Cupro-nickel refrigerant to water heat exchanger shall be of copper-nickel inner water tube and steel refrigerant outer tube design, rated to withstand 600 PSIG (4135 kPa) working refrigerant pressure and 450 PSIG (3101 kPa) working water pressure. Water lines shall also be of cupronickel construction.

Option: Insulated water-to-refrigerant heat exchanger, water lines and refrigerant suction lines shall be insulated to prevent condensation at low liquid temperatures below 50°F.

Fan Motor & Assembly

The fan shall be a direct drive centrifugal type with a twin dynamically balanced wheel. The housing and wheel shall be designed for quiet, low outlet velocity operation. The fan housing shall be constructed of galvanized steel and shall be removable from the unit for servicing of the fan motor. The fan motor shall be a two-speed type and shall be isolated from the housing by rubber grommets. The motor shall be permanently lubricated and have thermal overload protection.

Electrical

A control box shall be located within the unit compressor compartment and shall contain a 75VA transformer, 24 Volt activated, 2 pole compressor contactor, and solid-state controller for complete unit operation. Units shall be nameplated for use with time delay fuses or HACR circuit breakers. Unit controls shall be 24 Volt and provide heating or cooling as required by the remote thermostat/sensor.

Unit mounted controls shall consist of switches for "OFF", "FAN", and "AUTO" or "HEAT/COOL". An additional switch is provided for fan speed setting of "HI" or "LO". The unit shall be equipped with a fan switch on the side of the control to provide "CONTINUOUS" or "CYCLED" fan operation. "CYCLED" fan will turn the fan on with the compressor. A unit-mounted electronic thermostat with a remote electronic thermistor located in the return air will control compressor operation in heating and cooling modes. Unit mounted thermostat shall be the standard thermostat option. All unit mounted thermostats shall be auto changeover. Manual changeover WILL NOT be accepted. Electro-mechanical operation WILL NOT be accepted.

Controls

Standard: A compressor control module (CCM) shall be included to disable compressor operation in the event of a trip of any of the safety switches and to send a signal to activate a fault indicator light at the thermostat. The CCM

shall be capable of being reset from the thermostat or from the unit main disconnect switch. A terminal block with screw terminals shall be provided for field connection of all low-voltage wiring.

Option: Versatec microprocessor-based controller will provide operational sequencing; high and low pressure switch monitoring, freeze sensing, lockout mode control, emergency shutdown mode, random start, short cycle protection, LED mode and fault indicators, fault memory, input and output diagnostics, and field selectable options, and condensate overflow sensing.

Option: FX10 microprocessor-based controller that interfaces with an electronic thermostat to monitor and control unit operation. The control shall provide operational sequencing, fan speed control, high, low and loss of charge pressure monitoring, freeze sensing, condensate overflow sensing, lockout mode control, fault memory, field selectable options. The control shall communicate all mode, status, fault and lockout codes to the front end system for fast and accurate equipment diagnosis. The control shall provide fault retry three times before locking out to limit nuisance trips.

Optional FX10 microprocessor control communication protocols: N2, LonWorks, or BACnet

Option: Remote mounted thermostat is available for CCM & Versatec (standard with FX10 option). A terminal block with screw terminals will be provided for field control wiring.

Piping

Supply and return water connections shall be 1/2 in. [12.7 mm] FPT copper threaded fittings. All water piping shall be insulated to prevent condensation at low liquid temperatures.

A stainless steel tube stubbed out from the chassis is provided for condensate drain attachment. A short piece of polyvinyl hose is supplied to assist in adapting to drain.

Accessories

Hose Kits - Ball Valves (field-installed)

A flexible steel braid hose featuring Kevlar® reinforced EPDM core with ANSI 302/304 stainless steel outer braid and fire rated materials per ASTM E 84-00 (NFPA 255, ANSI/UL 723 & UBC 8-1). Ball valve at one end; swivel connector with adapter at the other end (swivel to adapter connection via fiber or EPDM gasket). Swivel connection

Engineering Guide Specifications cont.

provides union between heat pump and piping system. The hoses feature brass fittings, stainless steel ferrules. A full port ball valve shall be provided with integral P/T (pressure/temperature) port on supply hose. Specifications: Temperature range of 35°F [2°C] to 180°F [82°C]. Max. working pressure of 400 psi [2757 kPa] for 1/2" and 3/4" hose kits; max. working pressure of 350 psi [kPa] for 1" and 1-1/4" hose kits.

Hose Kits - Automatic Balancing and Ball Valves (field-installed)

A flexible steel braid hose featuring Kevlar® reinforced EPDM core with ANSI 302/304 stainless steel outer braid and fire rated materials per ASTM E 84-00 (NFPA 255, ANSI/UL 723 & UBC 8-1). Ball valve at one end; swivel connector with adapter at the other end (swivel to adapter connection via fiber or EPDM gasket). Swivel connection provides union between heat pump and piping system. The hoses feature brass fittings, stainless steel ferrules. A full port ball valve shall be provided with integral P/T (pressure/temperature) port on supply hose and automatic balancing valve with integral P/T ports and full port ball valve on return hose.

Specifications:

- Temperature range of 35°F [2°C] to 180°F [82°C].
- Max. working pressure of 400 psi [2757 kPa] for 1/2" and 3/4" hose kits; max. working pressure of 350 psi [2413 kPa] for 1" and 1-1/4" hose kits.
- Minimum burst pressure of four times working pressure.

Hose Kits - Automatic Balancing and Ball Valves with 'Y' strainer (field-installed)

A flexible steel braid hose featuring Kevlar® reinforced EPDM core with ANSI 302/304 stainless steel outer braid and fire rated materials per ASTM E 84-00 (NFPA 255, ANSI/UL 723 & UBC 8-1). Ball valve at one end; swivel connector with adapter at the other end (swivel to adapter connection via fiber or EPDM gasket). Swivel connection provides union between heat pump and piping system. The hoses feature brass fittings, stainless steel ferrules. A "y" strainer is provided on one end for fluid straining and integral "blowdown" valve.. A full port ball valve shall be provided with integral P/T (pressure/temperature) port on supply hose and automatic balancing valve with integral P/T ports and full port ball valve on return hose. Specifications:

- Temperature range of 35°F [2°C] to 180°F [82°C].
- Max. working pressure of 400 psi [2757 kPa] for 1/2" and 3/4" hose kits; max. working pressure of 350 psi [2413 kPa] for 1" and 1-1/4" hose kits.
- Minimum burst pressure of four times working pressure.

Auxiliary Heater (field-installed 208-230V units only)

An electric resistance heater shall provide supplemental and/or emergency heating capability. A manual switch shall be mounted on the side of the control compartment with "NORMAL" or "BOILERLESS" mode. "NORMAL" will run the compressor when there is a call for heating or cooling. "BOILERLESS" mode operation will run electric heat whenever there is a call for heating and run the compressor for a cooling call.
