Course Overview

Gynecological endoscopy is an operative field that continues to evolve in the scope and technique. Various special techniques in endoscopy have added immeasurably to the surgeon's ability to meet new challenges. The purpose of this course is to fully explore these techniques and to discuss specific operations. Lectures will present theory and techniques with outcome data, as well as a special non-CME session to enhance business solutions for your practice.

Learning Objectives:

Upon completion of this course, participants will be able to:

1. Discuss the role of Genomics for improved patient care.
2. List and describe the meaning of "Less Vasive", MacroVasive Surgery.
3. Describe treatment pathways for abnormal cervical cytology.
4. Evaluate surgical treatment options for hysterectomy, fibroids, adhesions, endometriosis, and pelvic organ prolapse.
5. Identify indications for cystoscopy while performing pelvic surgery.
6. Explain the use of robotics in benign gynecology.
7. Describe pathways to centers of excellence in minimally invasive surgery.
