A

abstract class 243
abstract interfaces 82–86
 between software
 modules 84–85
 reasons for 85–86

AbstractAddress class 243–244
AbstractMethodError 84
AccessControlContext 103
accessor 152, 163
act method 214–215, 219–220,
 223
Actor class 217, 219, 230, 232
Actor.actorOf method 231
ActorDispatcher class 87
ActorRef type 230–231
actors
 dynamic topology of
 228–233
 failure zones for 221–225
 references for 216–221
 scheduling zones for
 225–228
 supervisor 221
 when to use 212
AdaptiveSearchNode 231–232
add method 237
addHandle method 148
Address class 243–244
ALIVE class 249–250
annotation.target.getter 254
AnnotationHelpers 255
annotations 252–256
 and static fields 255–256
 for variance 141–144
 targets 254–255
anonfun class 50, 52
anonymous classes, serializa-
 tion of 250–252
anonymous functions 7, 10
AnyRef 5, 28, 135, 138, 143,
 245
AnyVal types 256

App trait 69–70
Application class 269
applicative functors 266
applicative style 268, 271
Applicative.build method 271
ApplicativeBuilder class
 270–271
apply method 6, 187, 190,
 215, 260, 263, 271
areEqual method 245–246
ArrayBuffer 186, 198–200, 208
ArrayList 199, 245–246
ArraySortTrait 211
avg method 51

B

B[A] parameter 151–152
Bar class 92, 100, 102
bar method 102
bar.Foo.type 124
Bar.type 100
bar(x) method 102
BeanInfo class 253
benefits, of type classes
 166–167
binary compatibility 83
BinaryFormat type 99
BinaryTree 188–189
bindings 91, 122
BitSet 190
blocks, of code 45–47
boilerplate 26
BoxesRunTime class 238
boxing 235–236
Branch class 188
BufferedReader 274

BufferedWriter 275
 build method 270
 bundleResult method 219–220
 by-name parameters 260
 Byte type 11

C

C parameter 157
 C.super 123
 C++ variables 8
 Callback type 136–137
 CanBuildFrom class 207–208
 canEqual method 41
 case statements 23, 62, 65
 Cat type 137, 139
 Category Theory
 and functional
 programming 258–261
 functors 259, 262
 monads 259, 264–272
 morphism 258
 cc target 21
 chaining implicits 246, 248
 changePassword method
 56–57
 Child class 55
 children method 159–160, 163
 class arguments 26
 ClassCastExceptions 239
 ClassManifest 154–155, 211
 closeResource method 126
 code blocks 45, 47
 coding conventions
 and other languages 44–47
 code blocks 45–47
 Coll type 207–208
 CollectionConverter type 247
 collections 180–211
 and methods 205–211
 ArrayBuffer 198
 CanBuildFrom 207
 hierarchy of 180–181
 immutable collections
 192–198
 list 194–195
 stream 195–198
 vector 192–194
 IndexedSeq 189–190
 Iterable 185–186
 iterator 185
 LinearSeq 187–189
 List 194
 Map 191–192

mutable collections 198–200
 ArrayBuffer 198–199
 observable 199–200
 synchronization of 200
 Observable collections 199
 parallel collections 203, 205
 Seq 187
 Set 190–191
 Splitable iterator 203
 Stream 195
 Traversable 182–185
 TraversableOnce 180
 vector 192
 views 201–203
 colRank 107
 combineResults 219
 companion class 19
 companion object 19
 complexmath 117, 119
 ComplexNumber class 115–
 119
 composition
 inheritance 76–82
 member-composition 78–80
 using constructor
 arguments 80–82
 CompressedIntSet 159
 computeValue 108
 concurrency, and
 immutability 31–34
 conditional execution, using
 type system 167–178
 heterogeneous typed
 list 169–171
 IndexedView type 172–178
 Config class 259, 261–263,
 269–271, 276
 config file 202–203
 ConnectionDataStore 270
 constraints
 for type parameters 134–135
 for types 131–134
 constructor arguments, compo-
 sition using 80–82
 content method 160
 context bounds 151, 153
 convertToScala 240
 count method 133
 covariance 137
 CreateArray 245
 createConnection method 38
 createDispatcher method 87
 createErrorMessage
 method 23
 createHandle 129

createPreparedStatement
 method 5
 createSearchTree 223
 CREATOR class 243–244
 curCount parameter 219
 currentIndex method 32
 curried method 266
 currying 266, 271

D

dangling operators 48–49
 Data class 254–255
 DataAccess class 77–80
 DatabaseConnection 261
 DatabaseResultSetWalker 207
 dataId 254
 DataStore class 269
 DEAD class 249–250
 deadActor 224
 default concepts 31
 default parameters 106
 DefaultHandles 129–130
 defaults
 implicit parameters
 with 106–112
 returning 35–36
 delayed construction, of
 objects 69–70
 delayedInit method 69–70
 DelayedInit trait 69–70
 Dependencies object 148
 describeContents method 243
 Dog class 58–59
 domain-specific languages.
 See DSLs
 doPrivileged method 103
 Double type 115–118
 doubleToReal 118–119
 doWork 252
 DriverManager.getConnection
 method 258, 261, 268, 270
 DSLs (domain-specific
 languages) 18
 dynamic deoptimization 15
 dynamic topology, of
 actors 228–233

E

eager parsing, in REPL 19–20
 early member definitions 71
 EJB (Enterprise JavaBeans) 4
 else statements 47

empty implementations 72, 76
 EmptyList class 142
 endofunctor 264
 Enterprise JavaBeans. *See* EJB
 Entity beans 4
 environment function 260, 270
 equals method 28, 42
 escape analysis 15
 Event object 40
 executeLocalQuery
 function 230
 ExecutorScheduler 226
 existential types 144–149
 Expand type 175–176
 experiment-driven development, and REPL 18–19
 Explicit object 95–96
 explicit return statement 26
 explicit return types 86, 88
 expression-oriented programming 21–26
 mutability of 24–26
 no return statements 22–24
 expression-oriented syntax 24
 expressions, with parentheses 48–49
 externalbindings.scala 94

F

F[_] type 262, 264–265, 267–268, 270
 fa parameter 267
 factory method 86, 190
 failure zones, for actors 221–225
 File parameters 272, 275
 FileInputStream 272
 FileLike, as type classes 163–165
 FileLike.children method 162
 FileLineTraversable class 183–185, 202
 FileObject 160
 FileWrapper class 104
 filter method 6, 36, 187, 191, 198, 205
 find method 6
 findAnInt method 90, 97
 first-class functions 7
 flatMap method 258–259, 261, 264–266
 flatten method 259, 264–265, 273

foldLeft method 51, 204–205, 215
 Foo class 91, 93, 101
 foo method 48, 55, 101, 136–137, 151–152, 156
 Foo object 19, 127, 141, 250, 255
 Foo type 97
 Foo.baz 128
 foo.Foo object 101
 Foo.type 129
 foo.type#Bar 124
 Foo#Bar 124
 FooHolder 46
 fooToBar 103
 for expression 35
 force method 201, 203, 215
 foreach method 36, 182–185, 197, 258, 274
 ForkJoinPool 203–205
 ForkJoinScheduler 226–228
 forSome method 146–147
 forward method 216–217
 FrontEnd 222
 Function interface 6
 Function object 139–141, 156
 function traits 13
 Function1 class 7
 functional programming
 and category theory 258–261
 applicative style 268–271
 concepts of
 in existing frameworks 4–6
 in Google Collections 6–8
 currying 266–271
 functors 262–266
 monads 264–266, 272–276
 vs. object-oriented programming 2–8
 functions, in Java 13–14
 functionToPrivilegedAction 103
 Functor interface 263–268, 273
 Functor.apply method 273
 Functor.map method 274
 functorOps 263
 functors 262, 266
 Future object 215, 217

G

GathererNode 219–220, 231
 Generic types 238

GenericSortTrait 209–210
 GenIterator 181
 GenSeq 181
 GenTraversableOnce 181
 get method 144–145, 172, 253–254, 259–260
 getConnection function 261
 getFoo 253
 getLines method 274–275
 getNextChild method 231
 getOrElse method 34
 getstatic operation 66
 getTemporaryDirectory method 36
 getValue 253
 Google Collections, concepts of functional programming in 6–8

H

Handle type 129, 131, 147–148
 handleMessage method 72–73
 hashCode method 28, 30
 HashMaps 191, 214
 HashSet 190–191
 HasLogger 79
 hasNext method 185–186
 HCons class 169–172, 175
 head method 187, 189, 195
 HeadNode 215, 217, 220–222, 224, 228
 heterogeneous typed list 169, 171
 hierarchy, of collections 180–181
 higher-kinded types 135–136
 HList class 170, 174–178
 HListViewN class 173–174, 176
 HNil class 169–172, 175
 holder object 20
 HotSpot runtime optimizer 14–15
 HttpSession 36

I

i object 115–117, 119
 identifiers 91–92
 if block 22
 if clause 22
 if statements 25, 47, 61
 If type 168
 if_icmpne 63

imaginary method 115, 118
 immutability 23–34
 and concurrency 31–34
 and object equality 27–31
 immutable collections 192–198
 list 194–195
 stream 195–198
 vector 192–194
 immutable references 26
 ImmutableHashMap 32
 ImmutableService 33
 Imperative coding 24
 implicit constraints 151–153,
 207
 implicit conversions 244–248
 and object identity 245–246
 chaining implicits 246–248
 implicit method 90, 96–97, 101
 implicit parameters, with
 defaults 106–112
 implicit views 101, 106
 implicitly function 99–100
 implicits
 capturing types with
 153–159
 Manifests 153–155
 specialized methods
 158–159
 type constraints 156–158
 context bounds 151
 conversions 10
 implicit scope 98–102
 scope of 112–119
 and bindings 92–96
 creating implicits for
 import 113–115
 via nesting 99–101
 via type parameters 98–99
 without requiring
 import 115–119
 view bounds 151
 import statement 92, 113
 index service 31
 IndexedSeq class 187, 189–190
 IndexedView type 172–178
 indexN function 177
 inexpressible language fea-
 tures, in REPL 20–21
 inheritance, composition
 including 76, 82
 initCoreSize 228
 inlining 15
 inner type 124
 InputChannel 216
 InputStream 160, 274–275

InputStreamReader 274
 insert method 31
 InstantaneousTime class 38
 int type 237–238
 interfaces, abstract 82–86
 between software
 modules 84–85
 reasons for 85–86
 IntHolder class 130
 IntStore class 130–131
 intToString 101
 InvalidClassException 249
 IScheduler interface 225
 isDirectory 159–160
 isEmpty method 187
 isLoggedIn method 56
 ItemType 141–142
 Iterable interface 181–182,
 185–186, 206, 210
 IterableLike 210
 Iterables object 7
 Iterator method 181, 185

J

Java and Scala 12–15
 annotations 252–256
 and static fields 255–256
 annotation targets
 254–255
 benefits of JVM 14–15
 implicit conversions 244–248
 and object identity
 245–246
 chaining implicits
 246–248
 language differences
 235–244
 in primitive boxing
 236–240
 in visibility 240–241
 unique features 241–244
 Scala objects in 13
 serialization 248–252
 Java class 12
 Java interfaces 12
 java.awt.Component 74
 java.io.File 104–105, 163–164
 java.lang.Class 154
 java.lang.IndexOutOfBoundsException
 Exception 186
 java.lang.Integer type 239–240,
 246–247
 java.lang.Object 135, 144–145,
 235

java.lang.String type 113
 java.net.URL 163
 java.security class 103
 java.sql.DriverManager.get-
 Connection(...) method 266
 java.util.ArrayList 199, 239
 java.util.Collections class 152
 java.util.concurrent.Executor
 226
 java.util.concurrent.Executors
 110
 java.util.Date class 38
 java.util.Executor 226
 java.util.List 92, 145
 javaClass 245
 JavaConversions 244–245
 javap 82, 87
 javax.swing.JComponent 74
 jdbc_password 261
 JdbcTemplate class 4
 JdbcTemplate method 5
 jdbc_url 261
 jdbc_user 261
 JRebel 21
 JVM bytecode 14
 JVM, benefits of 14–15

K

KittyDoggy class 58

L

lambdas 10
 language differences, Java and
 Scala 235–244
 in primitive boxing 236–240
 in visibility 240–241
 unique features 241–244
 LazyTraversable type 274–275
 Leaf type 188–189
 LeafNode 229, 232
 limiting scope, of
 implicits 112–119
 creating implicits for
 import 113–115
 without requiring
 import 115–119
 LinearSeq 187–189, 194–195,
 204
 lineLengthCount method 275
 link method 221, 223
 List class 134–135, 145–146,
 195–196, 237–238

- list collections 194–195
- List(start) method 64
- ListView 201
- loan method 273–276
- loaner pattern 5
- LoggedDataAccess class 78
- Logger class 77–79
- login method 56
- logout method 56
- longWrapper 114
- lookUp method 31
- loop method 65

M

- makeLineTraversable
 - method 274
- makeList method 145
- ManagedResource 273–276
- ManagedResource.writeFile
 - method 275
- Manifest class 154
- MatchError 63
- MatrixService.multiply
 - 111–112
- maxDocs 219
- maxResponses 219
- maxResults 214
- maxSize 228
- member-composition 78, 80
- menu button click 25
- MessageDispatcher 86–88
- method inlining 15
- method parameters 26
- methods
 - and collections 205–211
 - overridden, marking 55–60
- MixableParent 75
- mkdirs method 160
- MODULE\$ 13, 255
- Monad type 264–266, 273
- monadOps 265
- Monads 264–266, 272–276
- move method 27
- multiple inheritance, of
 - objects 70–72
- mutability, of expression-oriented programming 24–26
- mutable collections 198–200
 - ArrayBuffer 198–199
 - observable 199–200
 - synchronization of 200

- Mutable objects 25
- MutableService 32
- mutation statements 26

N

- NaiveQuickSort object 206
- naiveWrap method 247
- named and default
 - parameters 49
- named parameters 53, 55
- naming, variables 49–55
- Nat type 175–177
- nesting, scope of implicits
 - via 99–101
- NetworkEntity 73, 75
- newMethod method 83
- next method 185–186, 189, 197, 238
- NextIdxView 174
- NilTree 188–189
- Node class 64–66
- NoManifest class 154
- None 34–38
 - creating new object or returning default 35–36
 - executing block of code if variable is initialized 36–37
 - using potential variables to construct another 37–38
- NonZero type 176
- null object 160
- NullDispatcher 87
- Numeric type 158–159
- NumericRange 114

O

- object equality, and
 - immutability 27–31
- object identity, and implicit conversions 245–246
- ObjectInputStream 249
- object-oriented programming
 - composition 76
 - traits 69
 - vs. functional programming 2–8
- ObjectOutputStream 249
- objects 69–72
 - delayed construction 69–70
 - in Java 13
 - multiple inheritance 70–72

- observable collections 199–200
- ObservableBuffer 199–200
- ObservableMap 199
- ObservableSet 199
- observe method 129
- On Stack Replacement 15
- operator notation 10
- operator overloading 25
- operators, dangling 48–49
- optimization
 - tableswitch optimization 61–64
 - tail recursion
 - optimization 64–66
- Option class 34, 258–261, 263, 266, 271
- OptManifest 154
- or method 7
- Ordering type 190, 206, 211
- OriginalType 101
- OtherItemType 142
- Outer class 124
- OutputChannel 216–217, 219–220
- OutputStream 275
- overridden methods 55
- override keyword 55–57, 59–60

P

- package.scala 100
- par method 201
- parallel collections 203, 205
- parameters 53, 55
- parameterspaths, and
 - types 122
- ParArray 204
- Parent class 55
- parentheses, expressions
 - with 48–49
- ParentNode 231
- parsedConfigFile method 202
- parsing, in REPL 19–20
- ParVector 204
- paths, and types 122, 124
- pattern matching 23, 25, 61
- Player class 249
- PlayerStatus 249
- plus method 159
- Point2 class 28
- Point2D class 27
- polymorphic equality 38–42
 - implementing 40–42
 - timeline library example 38, 40

postfix operator 10
 Predef class 113–114
 Predicate interface 6–7
 Predicates class 6
 PreparedStatementCreator
 interface 5
 Prev type 177
 primitive boxing, in Java and
 Scala 236–240
 primitive widenings 11
 primitives 236
 println method 131, 148, 186,
 189
 private keyword 20
 private variables 19
 PrivilegedAction 103
 PrivilegedExceptionAction 103
 Property trait 71
 PureAbstract 85

Q

qsort 10
 QueryResponse 218
 QuickSort 209, 211
 Quicksort method 9
 QuickSortBetterTypes

 scatter-gather example 217,
 221, 225
 schedule method 251
 scheduling zones 225–228
 SchedulingService 251–252
 scope, of implicits
 and bindings 92–96
 limiting 112–119
 via nesting 99–101
 via type parameters 98–99
 sealed trait 216
 search method 64
 search, using actors to 213–216
 SearchableDocument 229, 231
 SearchNode 214–215, 218,
 221–223, 226, 228
 SearchNodeMessage type
 217–218
 SearchNodes 215, 217–221
 SearchNodeSupervisor
 223–224
 SearchQuery class 214–215,
 217–218, 220, 229, 231
 self-type 73
 send method 153
 sendMsgToEach 153
 seq method 201
 SeqLike class 207
 Serializable class 153, 158,
 165–166
 serialization 248–252
 service classes 2
 Session beans 4
 Set class 132, 159, 178
 set method 253–254
 setFoo 253
 setValue 253
 Simple Build Tool 21
 SimulationEntity 72, 74
 sizeHint 208
 SLEEPING class 249–250
 sort method 206, 208–209, 211
 Sortable type 209–211
 sortBy method 215
 Sorter class 167–168, 209
 Sorter.sort method 210

specialization 238
 specialized methods 158–159
 split method 230
 Splitable 203
 Static class 12
 static fields, and
 annotations 255–256
 static methods 13
 static typing 8–12
 dropping verbose syntax
 9–10
 implicits 10–12
 type annotations for
 variables 8–9
 type inference 9
 statics 241
 Stream class 192, 195–196, 198
 stream collections 195, 198
 Stream.empty 195
 strictEquals method 29
 String class 121, 124, 135, 138,
 140, 143, 146
 String object 101–102
 structural types 125, 131
 style guide 47
 Succ trait 175–176
 sum method 159, 187
 super.handleMessage 73
 synchronization, of mutable
 collections 200
 synchronize function 161, 163,
 178
 synchronized block 32
 SynchronizedBuffer 200
 synchronizedCollection
 (Collection) 152
 synchronizeDirectory 161
 SynchronizedMap 200
 SynchronizedPriorityQueue
 200
 SynchronizedSet 200
 SynchronizedStack 200
 synchronizedList(List) 152

T

T#X type 127
 T#Y type 127
 tableswitch bytecode 61
 tableswitch optimization 61, 64
 tail method 187–189
 tail recursion optimization 64,
 66
 take method 184–185, 187, 215
 TBool 168

TDD (test-driven
 development) 18
 Test object 69, 74, 94, 102, 114,
 247
 test.Foo class 91–92
 test.txt file 183, 272
 test-driven development.
 See TDD
 testExplicitImport method 95
 testInlineDefinition method 96
 test_prop property 260
 testSamePackage 94
 testWildcardImport method 95
 TFalse type 168
 ThreadPoolStrategy 110–112
 ThreadStrategy 109–112
 Time object 113–114
 timeline library example, poly-
 morphic equality 38, 40
 TimeRange class 113–114
 tmp method 93
 toList method 202
 toSet method 191
 toString method 17, 71, 94,
 101, 107, 130, 183
 trait linearization 71
 Traversable class 180–185, 197,
 202
 TraversableOnce 180
 TraversableOnce.scala 158
 TraversableView 197–198,
 202–203, 275
 traverse method 188
 traverseHelper method
 188–189
 TreeMap 191
 TreeSet 190–191
 TTrue type 168–169
 TupleN 169
 two-dimensional geometric
 point class 27
 two-dimensional plane 27
 type annotations, for
 variables 8–9
 type classes 159–167
 benefits of 166–167
 FileLike as 163–165
 type constraints 131, 156, 158
 type erasure 167, 235
 type inference 9
 type keyword 124–125
 type lambda 137
 type parameters
 constraints for 134–135
 scope of implicits via 98–99

type system, conditional execu-
 tion using 167–178
 heterogeneous typed
 list 169–171
 IndexedView type 172–178
 type traits 99
 types
 abstract types 124
 and paths 122–124
 capturing with implicits
 153–159
 Manifests 153–155
 specialized methods
 158–159
 type constraints 156–158
 concrete types 124
 constraints 131–134
 existential types 136, 144–149
 higher-kinded types 135–136
 path-dependent type 123
 structural types 125–131
 type keyword 124–125
 type parameters,
 constraints 134–135
 type projection 123
 volatile type 122

U

useFile method 105
 UserService class 57
 UserServiceImpl class 57
 UserSession object 56
 using statement 92

V

value method 253
 value_\$eq method 253
 var syntax 26
 variables
 executing block of code if
 initialized 36–37
 naming of 49–55
 type annotations for 8–9
 VariableStore 148–149
 variance 137–144
 annotations for 141–144
 contravariance 139
 covariance 137
 invariance 137
 vector collections 192, 194
 view bounds 151, 153
 view method 197, 201–202, 215

ViewAt method 175–177
views 201, 203
ViewType 101
visibility, in Java and Scala
240–241

W

Wildcard object 95–96
withFilter 258
workerPool method 269
wrap method 105, 247

WrappedArray 152
writeClient method 165
writeContent method 160
writeToParcel method 243

X

x method 91, 114, 127–128, 241
x object 94
x parameter 90
X type 127–128, 130, 168–169
x-axis 32

Y

y method 91, 111, 124, 128,
131, 146
y-axis 32

Z

zip method 186, 243
