

Business Requirements Document

NDC Airline Profile

11 June 2014

Document Status: Version 5.0 – FINAL

Workgroup members or interested parties should send their comments and requests to DDX Airline Profile Taskforce at DDX-TF-AP@iata.org and to DDX Steering Group at DDX-SG@iata.org

Revision History

The change log describes the modifications in each version of the document. .

Version	Date	Name	Description of Change
1.0	29.11.2013	GRS	Initiation
2.0	05.12.2013	GRS	Update User stories numbering – Inserted Use Cases as Appendix
3.0	17.12.2013	GRS	Minor edits following E. Runyon’s comments
4.1	18.02.2014	GRS/TG	Creation of Functional Requirements section, withdrawal of UC Activation/Deactivation of push messages
4.2	19.02.2014	Team	Edit / Modification / Review of Functional Requirements, re wording
4.3	21.02.2014	GRS	Added XML TF’s Message Model diagram
4.4	26.02.2014	A. Grintchenko	Inserted re-formatted Data Description (source: DDXWG 6 NDC Airline Profile BRD - Data Elements - V21FEB2014.xls), moved Error Handling to NFR section and added applicability table, other formatting changes and submission PDF.
4.5	22.04.2014	GRS	Rewriting following PADIS review comments (expanded In Scope section, cleaned out Data description from external references)
4.6	06.05.2014	Team	Following TF call, reviewed some of the elements (Data description), elucidated the use of the Airline Profile (graph), added Coordinates as fields of the Profile, amended the functional requirements.
4.7	13.05.2014	GRS	Split profile elements and message elements, inserted scenarii
4.8	16.05.2014	GRS + ER	Reshuffled 5.1 and 5.2, reviewed scenarii.
4.9	16.05.2014	Team	Addition of Radius to Data elements, and “Data Elements” line in Response body (§5.1).
4.10	03.06.2014	Team	Duplicated In Scope diagram
5.0	04.06.2014	Team	Edit, final review
5.0a	11.06.2014	A. Grintchenko	Updated terms and definitions section (aligned with all NDC BRDs), removed Section 6 (Message Models – as was agreed at PADIS Messaging Week #3, common to all NDC BRDs, and to maintain as a separate document. Minor edits and submission PDF.

	Appendix A: Airline Profile Use Cases	32

1 Introduction

Airline Profile is an object within the NDC environment that will have a twofold objective:

- Limit the number of NDC queries that are received by one particular airline host system
- For Aggregators or ORA/POAs, identify who a particular shopping request can be sent to

The goal of this document is both to describe the Airline Profile (AP) object (including the elements contained in the Airline Profile) and the interactions between the Airline Profile Sender and the Airline Profile Receiver.

As the AP is absent from the current distribution environment in the form that is described below, and as it should be embedded in the global NDC initiative, a new schema addressing interactions with the Airline Profile must be set up.

2 Scope

2.1 Principle of the Airline Profile

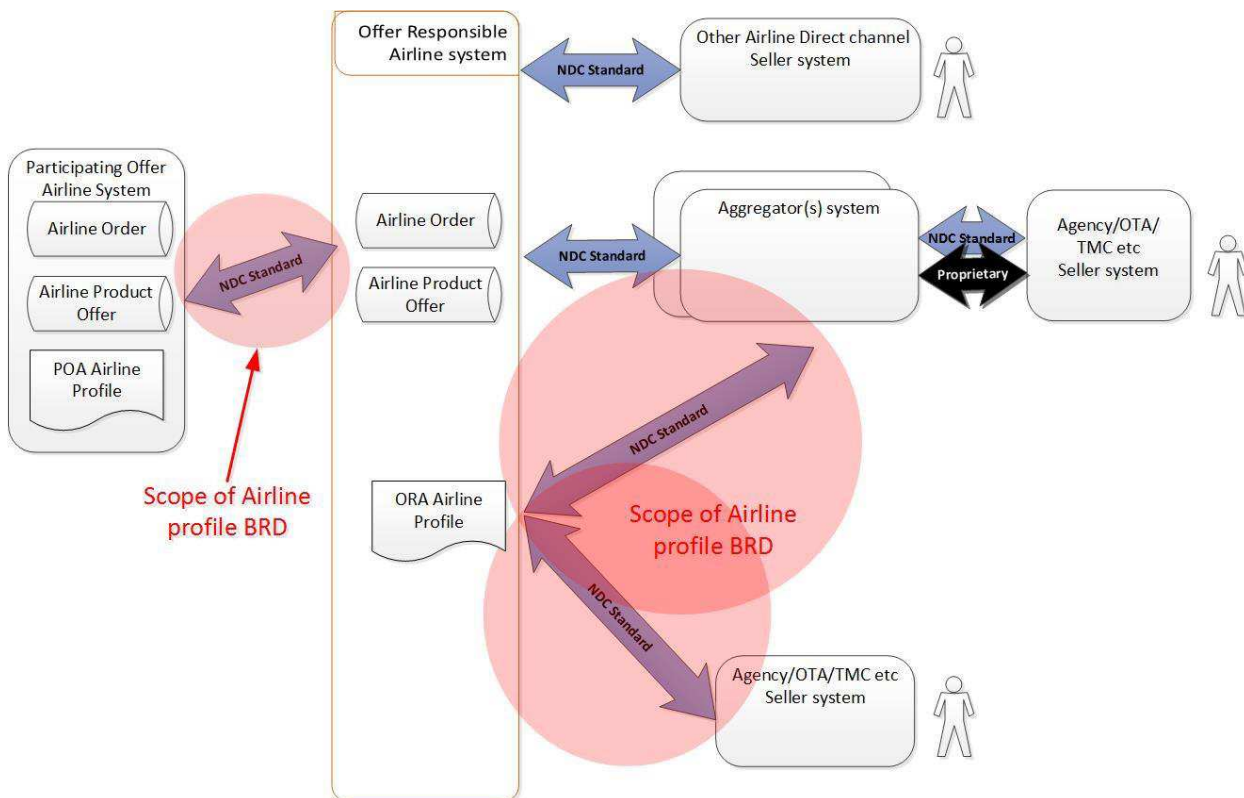

As outlined above, the Airline Profile (AP) aims at streamlining the volume of NDC shopping requests sent to airline systems by Aggregators or Seller systems.

In more detail, the AP should cover the following business goals:

1. As an Airline, I want to be able to define who can access my system directly based on the characteristics of the customer shopping and the characteristics of the request.
 - 1.1. Airline NDC Capability - As an Airline, I can indicate at an overall level whether you, an identified Aggregator, Seller or an Offer Responsible Airline (ORA), can connect to me (Y), or not (N). I also want to be able to indicate whether there are specific circumstances under which you can connect to me for offers or other services since I may not be fully NDC capable.
 - 1.2. Airline Service - As an Airline, I want to indicate whether an Aggregator, a Seller or an ORA is able to access me directly for specific services
 - 1.3. Specific Points-of-Sale - As an Airline, I want to indicate whether Specific Points of Sale are authorized to access me directly or not
 - 1.4. Airline Markets - As an Airline, I want to be able to specify criteria by markets/routes
2. As an Airline, Seller or Aggregator, I want to be able to determine how and where to shop, based on my customers, their itineraries and other characteristics of the journey. More specifically, I want to know which airline systems I can access.
 - 2.1. As an Airline, Seller or Aggregator, I want to be able to store this information locally.

As an Airline, Seller or Aggregator, I want to make sure that the Airline Profile information I have is the most up to date.

2.2 Field of Application

NB: Airline Profile is owned and controlled by the Airline. The picture above doesn't necessarily reflect where it actually resides.

NB2 : The arrow between the POA and the ORA reflects that the Airline Profile content is one of many NDC standard communication that will occur.

2.2.1 In scope

The place of the Airline Profile within the shopping sequence is already documented in the Airline Shopping BRD. For instance, in steps 4 and 4A of the Use Case 0, or step 3 in the Use Case 1, step 2 in Use Case 2 etc. In essence, a Seller/Aggregator/ORA wishing to dispatch an NDC shopping request to an Airline needs first to determine which Airline would accept the NDC shopping request. Such Seller/Aggregator/ORA would need to go through the content of the potential Airlines' Profiles and draft the list of Airlines that would allow this shopping request to come to their systems.

Illustration of the uses of the Airline Profile is provided in the two graphes below. Fig. 1 describes the usage that an Aggregator or Agency/OTA/TMC seller system can do of an Airline Profile, while Fig. 2 represents the same interactions, but in the event an interline itinerary is involved, ie when the Offer Responsible Airline may act in a similar way as an Aggregator.

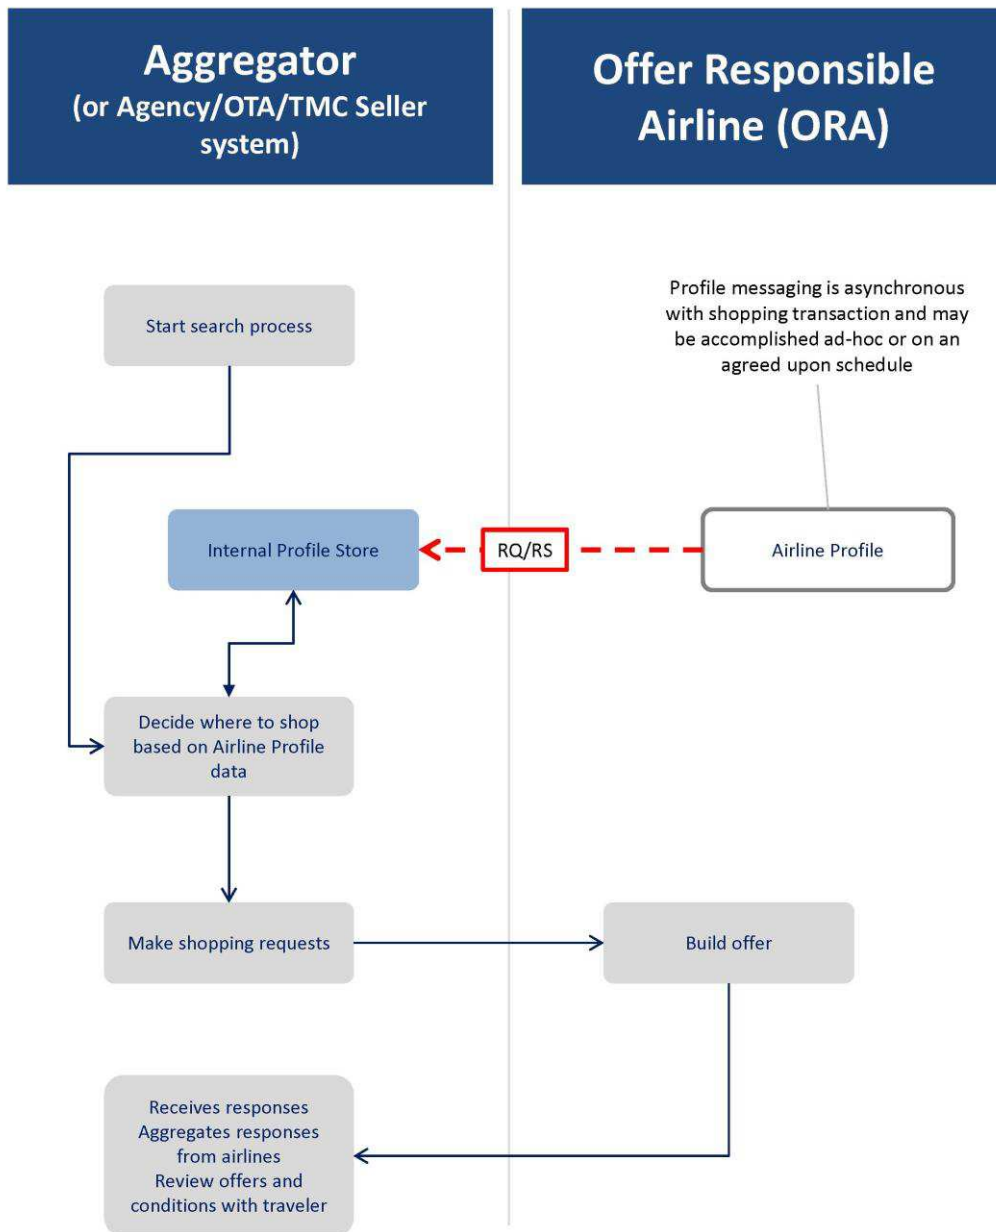

Fig. 1 : Aggregator & ORA

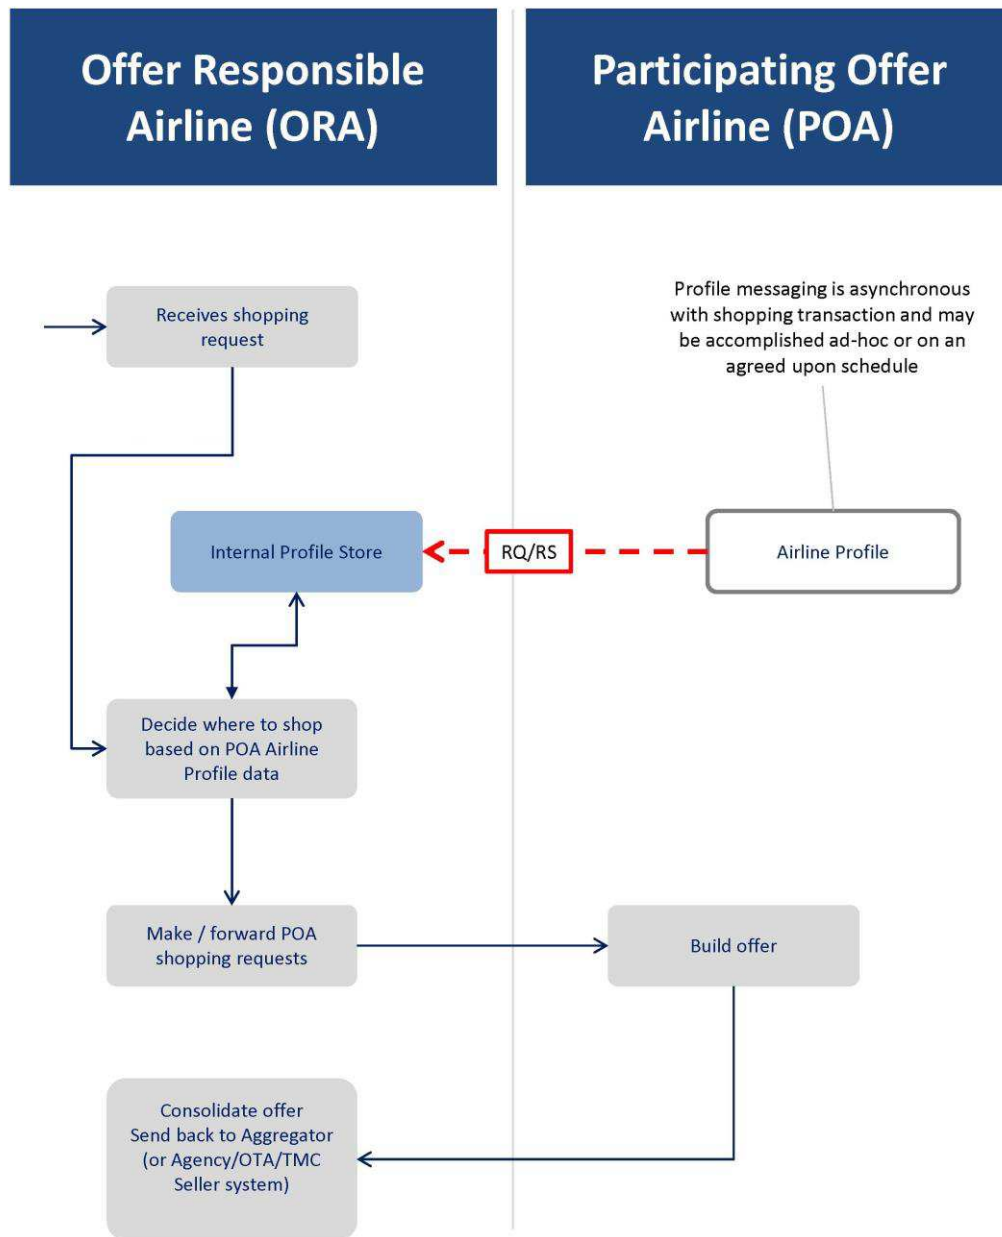

Fig. 2 : ORA & POA

The purpose of this BRD is to address the *actual exchange* of Airline Profile data. It is important to note that this may occur *asynchronously* from the processing of a shopping request (eg if the Seller/Aggregator/ORA chooses to locally cache the Airline Profile data). The two interactions documented in this BRD are the ones needed by the Seller/Aggregator/ORA to access Airline Profile Data :

- Seller/Aggregator/ORA requesting Airline Profile dataset
- Airline Profile dataset being pushed to Seller/Aggregator/ORA

2.2.2 Out of scope

The processing/interpretation of the Airline Profile Elements by the Airline Profile Receiver are out of scope of this BRD, and will be documented in the Implementation Guide.

The creation / update of the actual Airline Profile elements are out of scope.

The set up between the sender and recipient of the profile information (eg format of reception of the profile – link or XML, IP address or target location, etc.) is also out of scope. Furthermore, system access authentication is a process to be independently set up and managed by the individual parties and is considered out of scope for the data in the Profile.

2.3 Airline Profile Elements

As a record set, each profile will contain a number of elements. The current list of elements that may be contained in an AP is identified in Section 5, Data Description.

2.4 Terms and Definitions

Term and Definitions identified in this document and in other NDC Business Requirements Documents (ie. Airline Shopping, etc.) are maintained in a separate document *NDC Terms and Definitions*, owned by DDXWG Steering Group. Terms and definitions are included in this document as an excerpt from *NDC Terms and Definitions v.1.2* for easier reading and referencing.

Term	Definition	BRD Reference
Accountable Document	Validated official <u>document</u> (such as any type of an airline ticket, or a Standard Traffic Document (STD) or <u>payment voucher</u>) that has a value and must be accounted for.	Order Management
Acknowledgement	Acknowledges the receipt of a message but does not imply acceptance of the message content	Order Management
Affinity Shopping	A wide search defining a range of criteria including specific interest, destination attributes and defined budget plus date and destination ranges.	Airline Shopping
Aggregator	The business function of distributing a Seller's shopping request to multiple Airlines and aggregating the subsequent responses.	Airline Shopping; Payment and Ticketing
Airline	Supplies product offers in response to receiving a request from a Seller. Airline refers to itself and any subcontracted entity providing a service to the airline	Airline Shopping; Payment and Ticketing
Airline currency	Miles, vouchers, residual value EMD, airline issued gift/cash card	Payment and Ticketing

Ancillary Services or Optional Services	Ancillary Services are defined in PSC Resolution 787 as anything outside of product attributes (optional or discounted). Ancillary Services may be bundled in the product offer, or offered as additional, a la cart services. For the purposes of this document the term Ancillary Services is sometimes used interchangeably with the term Optional Services.	Airline Shopping; Interline Ancillary Shopping; Payment and Ticketing
Anonymous Shopping	No traveller personal data in the shopping request	Airline Shopping
API	Application Programming Interface	Airline Shopping; Payment and Ticketing
Attribute Shopping	A search specifying one or more attributes to get more focused results (eg equipment types, Seat types and characteristics, baggage allowance, meals, etc.	Airline Shopping
Authentication	The process by which a system identifies an individual or a business entity to make sure that the user or the business entity is who they claim to be, based on attributes that are sent in a message.	Airline Shopping; Payment and Ticketing
Bilateral Interface Agreement	A documented agreement made between the sender and receiver as the basis of the data exchange between systems This agreement defines a number of features which are mandatory or optional within the specification (time outs, message order processing, reject processing)	Interline Ancillary Shopping
Bilateral Time Limit	A generic structure for time limits, that is subject to bilateral agreements between parties.	Airline Shopping (requires a change) and Order Management
Booking Time Limit	Booking time limit is the amount of time within which the booking transaction must be completed (does not include ticketing). NOTE: This definition in Airline Shopping is superseded with the revised definition of Offer Time Limit (revised) as provided in Order Management BRD	Airline Shopping (requires change)
Cabin	A compartment where passenger seats are installed	Interline Ancillary Shopping
Campaign Identifier	Campaign ID is a tracking code used by the airline's advertising analytics system to monitor and optimize the paid advertising by the airline across interactive marketing channels. By including the Campaign ID with shopping requests the online media publisher (MSE, OTA, affiliate partner, booking widget, etc.) can help guide the airline so that the airlines personalization of	Order Management

	offers can align with any paid advertising that may be present on the publisher's display.	
Card payment*	Various forms of payment that include: credit card (includes UATP), debit card (PIN based or signature based), pre-paid debit/bank/gift card, cash card where the Airline is the merchant. Refer to IATA Resolution 728 Attachment A for full details on card types and codes.	Payment and Ticketing
Cash payment	Any payment that is collected by the agent and settled between the Airline and the agent. Refer to IATA Resolution 728 Attachment A for full details on card types and codes.	Payment and Ticketing
CBT	Corporate Booking Tool	Airline Shopping
Check/Cheque*	Personal or bank issued order for transfer of money. Refer to IATA Resolution 728 Attachment A.	Payment and Ticketing
Commercial Agreement ID	Code or ID referenced by ORA or POA in message exchange which refers to a previously created bilateral agreement. A SPA is an example.	Interline Ancillary Shopping
Corporate ID	An ID provided by an airline to uniquely identify a corporate location for which a commercial arrangement exists.	Order Management, plus change to Airline Shopping
Deposit Time Limit	Time by which a deposit must be paid for an Order.	Airline Shopping (requires change) and Order Management
Distribution Channel Provider	An entity that has the capability to interface with an airline's dynamic shopping API enabling distribution of airline product offers across one or multiple channels. For the purposes of this document it is assumed that such provider shall use industry standard NDC XML messages to communicate with airlines dynamic shopping API, and may act as a content aggregator.	Airline Shopping
FQTV	Frequent Traveler	Airline Shopping
Group Booking	An Order made under a group name without individual passenger names at the point of creation	Order Management
Inventory Guarantee Time Limit	The time that inventory for a specified product offer is guaranteed as available. The inventory held must be converted into a completed order before the time limit expires otherwise the guarantee is lost. Held Inventory is referenced by an Inventory Guarantee identifier (equivalent in business terms to the legacy ITAREQ 'Conversation ID'). In the context of Interline Ancillary Shopping, this term is defined as the time window (or	Order Management; Interline Ancillary Shopping

	final date) identified by the ORA or POA where inventory will be held prior to booking.	
Inventory Guarantee Identifier	An unique identifier issued by an Airline to reference that inventory for a specified offer will be guaranteed as available for a period	Order Management
Leg	The operation between a departure station and the next arrival station	Interline Ancillary Shopping
Marketing Carrier	The carrier that sells with its own code as part of a code share agreement on a flight that is actually operated by another carrier.	Interline Ancillary Shopping
Meta Search deep link	A link to an airline's or OTA's itinerary purchase page enabling the user to purchase a specific itinerary offer.	Airline Shopping
Meta Search shallow link	A link to an airline's or OTA's shopping results page listing multiple flight options for a pre-specified city pair and dates, as well as upsell / cross-sell products	Airline Shopping
MSE (Meta search Engines)	MSE redirect their users to an airline or Online Travel Agent for the creation of an Airline Order. A MSE is not involved in servicing the resulting order - this is done by the OTA or Airline.	Order Management
Multi Leg Flight	A flight comprised of more than one leg	Interline Ancillary Shopping
Naming Time Limit	Time by which an Order, must be completed with individual passenger names.	Order Management
OAL	Other AirLine	Airline Shopping
Offer ID	<p><i>Offer ID</i> facilitates the tracking and verification of individually priced offer(s) selected from the shopping response. Only the <i>Offer IDs</i> of the ORA (Offer Responsible Airline) are returned in shopping responses.</p> <p><i>Offer ID</i> is unique to each individually priced offer in the shopping response even if the offer price is zero.</p> <p>OfferID may be specific to individual passengers in the offer, and may be associated with a segment or a journey.</p> <p>The set of Offer IDs returned in a response are referenced by a Shopping Response ID.</p>	Airline Shopping; Payment and Ticketing

Offer item	One or more products that has one price, eg a product bundle	Order Management
Offer Responsible Airline (ORA)	<i>Offer Responsible Airline:</i> The airline responsible for returning a combined offer, including participating airline offers, to the requesting entity	Airline Shopping; Interline Ancillary Shopping; Payment and Ticketing
Offer Time Limit	<i>Offer Time Limit</i> is the amount of time within which offers in a shopping response may be reserved. Upon expiring, a new shopping request must be sent. NOTE: This definition in Airline Shopping is superseded with the revised definition of Offer Time Limit (revised) as provided in Order Management BRD	Airline Shopping (requires change)
Offer Time Limit (revised)	The time within which offers must be converted into completed Orders. On expiry a new shopping transaction is required. This definition supersedes both Offer and Booking Time Limit definitions in the Shopping BRD. Offer Time Limit is mandatory.	Order Management; Interline Ancillary Shopping; Payment and Ticketing
Operating Carrier	The carrier that holds the Air Operator's Certificate for the aircraft used for that flight	Interline Ancillary Shopping
Order	An Order is a uniquely identified record of the agreement of one party with another to receive products and services under specified terms and conditions. 'Order' supports the sale of a flexible range of airline products and services that are not necessarily journey based (eg subscription services). A 'PNR', 'super PNR' and 'ticket' are all today's versions of airline implementations of aspects of an Order. An Order will contain 1 or more Order Items each with an identifier that is unique within an Airline's Order Management system. An Order may support non-homogeneity, ie each passenger in an Order may hold different sets of order items at different prices.	Order Management; Payment and Ticketing
Order item	A selected Offer item.	Order Management
Order Management	Order Management is the process of taking, amending, tracking and fulfilling requests for an airline's products and services.	Order Management
OSI	Other Service Information	Airline Shopping
OTA	Online Travel Agency	Airline Shopping
Participating Offer Airline (POA)	<i>Participating Offer Airline:</i> An airline other than the Offer Responsible Airline involved in a product offer	Airline Shopping; Interline Ancillary Shopping; Payment and

		Ticketing
Payment Time Limit	The deadline by which a commitment to pay must be made for the items in the order. This includes ticketless transactions and other accountable documents (ie EMD. Payment Time Limit and Ticket Time Limit may be the same in most cases; however, Payment Time Limit expands to include ticketless transactions and other accountable documents. Payment Time Limit is mandatory.	Order Management; Interline Ancillary Shopping; Payment and Ticketing
Personalised Shopping	Traveller consents to include personal data in the shopping request	Airline Shopping
PNR	Passenger Name Record	Airline Shopping; Payment and Ticketing
Price Guarantee Time Limit	Period for which an Offer price is guaranteed. On expiry an Offer may be re-priced up to the point an accountable document is issued. A Price Guarantee cannot extend beyond the Offer Time Limit unless the Order has been created.	Airline Shopping (requires change) and Order Management
Product Bundle	Where several products are offered for sale as one product. NOTE: This definition has evolved in Order Management BRD, and has the same meaning as Offer Item	Airline Shopping
Referrer Identity	Identifies to the aggregator or the airline, the specific commercial contract under which a particular message should be tracked; for example, is the message related to (A) the x cents per click for traffic from Indonesia or (B) the y % per ticket for each booking that originates from Japan.	Order Management
Seller	Creates shopping requests to Airlines on behalf of a customer and displays the subsequent product responses for review	Airline Shopping; Payment and Ticketing
Service Item	An airline service item is a product or a service that can be separately delivered and uniquely described by an airline. It is referenced by an ID that is unique within an airline. A service may be sold separately in a single offer/ order item or sold bundled with other service items in a single offer/order item (eg a return price consisting of inbound and outbound services).	Order Management

Service Time Limit	Time limit for EMD creation. May be different from Payment Time Limit	Interline Ancillary Shopping
Settlement providers	Third parties that provide settlement services between agent and airlines. Could include ARC, BSP, TCH, MoneyDirect, eeNet, etc.	Payment and Ticketing
Shopping	A process whereby a Seller is able to request offers from the airlines (ie flight and ancillaries) based on its desired search criteria and receive offers corresponding to its request. There are various types of shopping, including, for example, Personalized/ Anonymous and Attribute/ Affinity shopping types as defined in this document.	Airline Shopping
Shopping Basket	A Shopping Basket is e-commerce software that allows visitors to an internet site to select items for eventual purchase	Airline Shopping
Shopping Response ID	<p><i>Shopping Response ID</i> facilitates the tracking of what was offered and is an identifier unique to the source airline for a set of product offers returned in response to a shopping request.</p> <p><i>Shopping Response ID</i> may be comprised of an <i>Offer ID</i> corresponding to an individual flight and/or ancillary service product offer that make up the offer. See Appendix D for scenarios illustrating use of this identifier.</p>	Airline Shopping
SSR	Special Service Request	Airline Shopping
Ticket Time Limit	<i>Ticket Time Limit</i> is the amount of time which the booking maybe held until it must be ticketed or other accountable documents issued (eg EMD).	Airline Shopping
Ticketing	The process of issuing any type of an accountable document to fulfil an airline order.	Payment and Ticketing
TMC	Travel Management Company	Airline Shopping
XML	Extensible Markup Language	Airline Shopping

3 Functional requirements

Ref #	Category	Requirements	
1.1	Airline Profile Notification	Airline Profile Sender pushes Airline Profile or link to Airline Profile Receivers that have been activated/authorized, including Profile version number.	<ul style="list-style-type: none">• AirlineProfileNotif (new message)
1.2	Airline Profile Acknowledgement	Airline Profile Receivers send a (Non) Acknowledgement that they have received the Airline Profile and version number received	<ul style="list-style-type: none">• AirlineProfileACK or AirlineProfileNACK (new messages)
2.1	Airline Profile Request	Request from an Airline Profile Receiver to an Airline Profile Sender to send one or more Airlines' Profiles	<ul style="list-style-type: none">• AirlineProfileRQ (new message)
2.2	Airline Profile Response	Airline Profile ad hoc content or Airline Profile link is sent to Airline Profile Receiver, including Profile Version, number of records in file and the order in which the records are to be applied within a Profile Owner's profile	<ul style="list-style-type: none">• AirlineProfileRS (new message)
2.2.1	Airline Profile Response - Profile Owner	Ability to define which Airline is the Owner of the Profile Record	<ul style="list-style-type: none">• AirlineProfileRS (new message)
2.2.2	Airline Profile Response - Receiver	Ability to define who the Receiver is of the Profile Record	<ul style="list-style-type: none">• AirlineProfileRS (new message)

Ref #	Category	Requirements	
2.2.3	Airline Profile Response - Criteria	<p>Ability to define whether a Receiver may send a Query to the Owner based on the following criteria:</p> <ul style="list-style-type: none"> - Route (Origin, Destination) - Airline schedule/participation in Route (Inclusion as marketing and/or operating carrier) - Point of Sale <ul style="list-style-type: none"> o By Market o By Type/ID 	<ul style="list-style-type: none"> • AirlineProfileRS (new message)
2.2.3.1	Airline Profile Response - Default behavior	Ability to define the default behavior for each criteria element defining whether the absence of data indicates acceptance or inclusion.	<ul style="list-style-type: none"> • AirlineProfileRS (new message)
2.2.4	Airline Profile Response - Action	<p>Ability to indicate which fares/services may be shopped via NDC for the given criteria</p> <ul style="list-style-type: none"> - Services Requested (Fares, Seats, Bags, Other) 	<ul style="list-style-type: none"> • AirlineProfileRS (new message)

4 Non Functional Requirements

4.1 Error management

These are error messages that need to be developed. However actually *sending* an error message is optional.

Ref #	Description	Corrective action
1	Messaging error. Failure in the receipt or response to a profile request, bad syntax or format, incomplete XML , failure to authenticate Sender/Receiver, etc.	TBD as per XML TF
2	Content level error message.	
2.1	<i>Invalid codes (Airline, Airport Code, City code, etc.) within the Airline Profile</i>	<i>Error message may be sent to Airline Profile Sender, as well as new request for Profile.</i>

Ref #	Description	Corrective action
2.2	<i>Response not matching request (eg requested Airlines list)</i>	<i>Error message may be sent to Airline Profile Sender, as well as new request for Profile.</i>
3	Profile element in other messages (shopping, order, etc.) not matching terminology in current Airline Profile	
4	(Assumption : AirlineProfileRQ carrying version number) Version number contained in AirlineProfileRQ is up to date	Error message may be sent to Airline Profile Receiver notifying no update available

4.2 Non-Functional Requirements Applicability

Feature	Definition	Requirement Order Management
Standard based and interoperable messaging protocol	Messaging protocol must be based on industry standards to enable interoperability	Applicable
Send Only	Also called Push MEP is simple one-way messaging where a message is sent with no expectation of a response.	Conditional
Receive only	Also called Pull MEP is a message pattern where a non-addressable sender supports the ability to explicitly obtain messages from another application. This can be used for exchanges that are of “pull” type only	n/a
Request/Response exchange	Message pattern consists of one or more request/response pairs. The correlation between a request and a response is well defined. In this MEP the response maybe deferred and the requesting application may or may not block application processing until a response is received	Applicable
Diagnostics/Routing	Authentication, diagnostic, logging & routing information should be included in the message header and not the payload	Applicable
Reliability	Protocol capability to support assured and single delivery to the receiving application with no message loss	Applicable

Feature	Definition	Requirement Order Management
Message acknowledgement/delivery report	Message exchange protocol acknowledgement provides guaranteed delivery in a sense that if there is any communication failure or any remote system unavailability, the message is transparently repeated until the application has received it. This is referred to as reliability feature necessary for business critical messages. Message loss may happen using application acknowledgement only in cases like application or system problems. It may however be complementary to reliability mechanism. Additionally there is also a notion of end to end delivery report that can be used to request a delivery notification form the end user generated by its messaging agent. This may be used for cases that a proof of delivery is required by the sender.	Conditional
Fault management	Capability to report permanent or transient problems or errors in message exchange and return this information to the sending application	Applicable
Priority handling	Capability to assign priority to messages and process accordingly – separate between processing and delivery related priority handling.	Applicable
Data confidentiality	Assurance that data remain secret except for those entities that have been authorized to access this data. (i.e. encryption/decryption). Identify any data elements that are subject to specific confidentiality requirements. For example payment card data will be subject to PCI compliance requirements, and personal data will be subject to PII (Personally Identifiable Information) compliance requirements.	Applicable to passenger personal data
Requester Authentication	Capability to confirm the identity claimed by a sender or entity	Supported in all Request messages. To include the identity of the source of the request (the identity of the selling entity, the staff member making the request and the Point of Sale channel) and any intermediaries that the request has passed through.

Feature	Definition	Requirement Order Management
Message integrity	Capability to ensure that data are preserved in its original form and not altered	Applicable to the message body
Capability to target multiple recipients	Ability to send a message to more than one recipient or applications	Applicable, eg to multiple directly connected airlines plus one or more aggregators
Multi part Messages	Communications do not support the transmission of messages in multiple parts.	Applicable
Support for attachment (for rich documents (image, large files etc.))	Ability to have digital attachments (to allow simpler management of attachments and optimized transport)	Attachments must not appear in the message – only links to them
Message Compression	Capability to compress (to save bandwidth)	Applicable
Support for specific protocols	Please indicate what messaging protocols you expect the industry will use to exchange the messages.	May need to support either or both SOAP and REST
Response Time	Communications must support a timeout function	Applicable
Versioning	Messages must comply with PADIS versioning specifications	Applicable
Localisation	Any localisation data elements must support the ability to provide a language identifier	Applicable
Unique Message Identification	Messages should provide the ability to support a unique message identifier	Applicable
State	Messages should have the ability to support both stateful and stateless modes of communication	Shopping messages will be stateless
Message Expiration	Communications should provide the ability to stipulate an expiration timestamp	Applicable
Schema Language Locale	Message schema must be written in en_us	Applicable

5 Data Description

5.1 Airline Profile Notification and Acknowledgement

The following data elements describe the contents of the data utilized in the AirlineRQ/RS, AirlineProfile Notif and AirlineProfileACK/NACK where an Airline Profile sender can push a profile or link to a Profile to a Receiver and a Receiver can acknowledge receipt of the information. Further detail of the actual Airline Profile elements are described in Section 5.2.

DATA GROUP	METADATA	ANNOTATION	FORMAT	SPECIFICATION	MESSAGE INCLUSION
Profile Request Response Header	RECEIVER ID	Identification of the Airline Profile Receiver : may be either an Aggregator Identity ID, a Travel Agency ID, or an Airline identity Code as defined in the Order Management Data Dictionary		Airline Profile Receiver ID	AirlineProfileRQ/RS AirlineProfileNotifRQ/ACK/NACK
Profile Request Response Header	Profile Version – Time stamp			Format = Standard Time Stamp, ie YYYY-MM-DD HH:MM:SS	AirlineProfileRQ/RS AirlineProfileNotifRQ/ACK/NACK
Profile Request	AIRLINE	Identification of requested Airlines	2AN	One or more Airline Code	AirlineProfileRQ AirlineProfileNotifRQ
Response Header	RECORD COUNT	The number of decompressed records contained in this file.	9N	0-999999999	AirlineProfileRS AirlineProfileNotifACK/NACK
Response Body	Link	Link to Airline Profile Data Elements		Actual location of Airline Profile Elements (if link used)	AirlineProfileRS
Response Body	Data elements	Data elements		Actual Data Elements of the Profile (if no link used)	AirlineProfileRS

Response Body	Profile Version Received – Time stamp	Actual time stamp of the reception of the profile.	6	Format = Standard Time Stamp, ie YYYY-MM-DD HH:MM:SS	AirlineProfileRS AirlineProfileNotifACK
ACK Response	AIRLINE PROFILE RECEIVED	Identification of received Airlines		One or more Airline Code	AirlineProfileRS AirlineProfileNotifACK
NACK Response	Failure Notice	Failure flag requesting resend the last message sent		One or more Airline Code	AirlineProfileNotifNACK

5.2 Data Elements of the Profile

The following list of elements does not necessarily comprehensively describe what services a particular airline may offer and should not therefore be taken as a comprehensive catalogue of services for that particular airline.

FUNCTIONAL REQUIREMENTS LINK	METADATA	DESCRIPTION	FORMAT	SPECIFICATION
R 2.2	Profile Version – Time stamp			Format = Standard Time Stamp, ie YYYY-MM-DD HH:MM:SS
	RECORD COUNT	The number of decompressed records contained in this file.	9N	0-999999999
R 2.2.1	PROFILE OWNER	Profile owner (Airline)	2AN	The standard industry alphanumeric code for the airline. (Third position is currently blank for future expansion.)
R2.2	SEQUENCE NUMBER	A number indicating the sequence (ascending) in which the entries would be looked through.		0000001-9999999

	TVL AGENCY	A tag indicating if the request may be sent by travel agencies.		X = Must be a travel agency Blank = No application. Check the rest of the table for restrictions.
	CXR/GDS	A tag indicating if the request may be sent by a specific carrier or GDS.		Standard industry alpha-numeric airline code or CRS code. (Third position reserved for future expansion.) Blank = Any CRS/CXR
R 2.2.3	POS GEO SPEC: TYPE	A code indicating the type of geographic specification that will be found in the following fields.		Blank or A = Area S = State SA = Sub Area C = City N = Country CO = Coordinates
	POS GEO SPEC: AREA	A one IATA numeric area designator.		1 = Western Hemisphere 2 = Europe, Africa, and the Near East 3 = Far East, Australia, and Pacific
	POS GEO SPEC: SUB AREA	Standard ISO/IATA sub area code		
	POS GEO SPEC: COUNTRY	The standard IATA country code.		Two alpha IATA country codes.

	POS GEO SPEC: CITY	The standard industry city code.		Three alpha IATA city codes.
	POS GEO SPEC: STATE	The standard state postal Code.		Two alpha code. If coded, it will always be preceded by a country code.
	POS GEO SPEC: AIRPORT	The standard industry airport code.		Three alpha IATA airport codes
	POS GEO SPEC : COORDINATES	Coordinates (Latitude, Longitude, as defined in the Data Dictionary)		
	<i>POS GEO SPEC : COORDINATE RADIUS</i>	Radius (in miles) to use in conjunction with coordinates above		
	POS NON GEO : TYPE	A code Indicating the type of CODE data to be found in the following fields:		T = Pseudo Code/Travel Agency Code I = IATA Travel Agency No. H = Home IATA Agency No. U = Home Travel Agency Code X = Department/Identifier V = CRS/CXR Department Code L = LNIATA Number (CRT Address) Blank = No application
	POS NON GEO : CODE May be any one of the following:			
	<i>AGENT PSEUDO CITY CODE</i>	Up to a six character code for a pseudo		

		code/Travel Agency (left justified) followed by spaces.		
	<i>AGENT NUMERIC CODE (IATA NUMBER)</i>	An eight digit IATA assigned travel agency code.		
	<i>DEPARTMENT/IDENTIFIER</i>	Up to a seven digit code indicating the airline department or CRS agency/department (right justified) with leading zeros. Space in packed byte 32 or unpacked byte 41.		
	<i>CRS/CXR DEPARTMENT CODE</i>	Up to a six character code indicating the airline department or CRS agency/department (left justified) followed by spaces.		
	<i>LNIATA NUMBER (CRT ADDRESS)</i>	Up to an eight character assigned complete line address (left justified) followed by spaces		
	<i>AIRLINE SPECIFIC CODE</i>		2AN	One or more Airline Code
R 2.2.3	DIRECTIONAL INDICATOR			1 = From LOC 1 to LOC 2 2 = To LOC 1 from LOC 2 3 = Originating from LOC 1 to LOC 2 4 = Originating from LOC 2 to LOC 1 "Blank = No application"

	OFFER GEO SPEC – LOC 1	Identifies the Offer Origin Point.		
	OFFER GEO SPEC – TYPE	A code indicating the type of geographic data that will be found in the following geographic location field:		Blank or A = Area SA = Sub Area N = Country S = State C = City P = Airport CO = Coordinates
	OFFER GEO SPEC – GEOGRAPHIC LOCATION	May be any one of the following:		As specified below; or Blank = No application
	OFFER GEO SPEC – AREA	A one-digit numeric area designator.		1 = Western Hemisphere 2 = Europe, Africa and the Near East 3 = Far East, Australia and Pacific
	OFFER GEO SPEC – SUB AREA	Standard ISO/IATA sub area code		

	OFFER GEO SPEC – COUNTRY	The standard IATA country code.		Two alpha IATA country codes.
	OFFER GEO SPEC – CITY	The standard industry city code.		Three alpha IATA city codes
	OFFER GEO SPEC – STATE	The standard state postal Code.		Two alpha code. If coded, it will always be preceded by a country code.
	OFFER GEO SPEC – AIRPORT	The standard industry airport code.		Three alpha IATA airport codes
	OFFER GEO SPEC - COORDINATES	Coordinates (Latitude, Longitude, as defined in the Data Dictionary)		
	<i>POS GEO SPEC : COORDINATE RADIUS</i>	Radius (in miles) to use in conjunction with coordinates above		
	OFFER GEO SPEC – LOC 2	Identifies the Offer Destination Point.		

	OFFER GEO SPEC – TYPE	A code indicating the type of geographic data that will be found in the following geographic location field:		Blank or A = Area SA = Sub Area N = Country S = State C = City P = Airport CO = Coordinates
	OFFER GEO SPEC – GEOGRAPHIC LOCATION	May be any one of the following:		As specified below; or Blank = No application
	OFFER GEO SPEC – AREA	A one-digit numeric area designator.		1 = Western Hemisphere 2 = Europe, Africa and the Near East 3 = Far East, Australia and Pacific
	OFFER GEO SPEC – SUB AREA	Standard ISO/IATA sub area code		
	OFFER GEO SPEC – COUNTRY	The standard IATA country code.		Two alpha IATA country codes.
	OFFER GEO SPEC – CITY	The standard industry city code.		Three alpha IATA city codes.

	OFFER GEO SPEC – STATE	The standard state postal Code.		Two alpha code. If coded, it will always be preceded by a country code.
	OFFER GEO SPEC – AIRPORT	The standard industry airport code.		Three alpha IATA airport codes
	OFFER GEO SPEC - COORDINATES	Coordinates (Latitude, Longitude, as defined in the Data Dictionary)		
	<i>POS GEO SPEC : COORDINATE RADIUS</i>	Radius (in miles) to use in conjunction with coordinates above		
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC	Specifies that all travel on the itinerary must be wholly within the specified location.		
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC - TYPE	A code indicating the type of geographic data that will be found in the following geographic location field:		Blank or A = Area SA = Sub Area N = Country S = State C = City P = Airport CO = Coordinates
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC	May be any one of the following:		As specified below; or Blank = No application

	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC - AREA	A one-digit numeric area designator.		1 = Western Hemisphere 2 = Europe, Africa and the Near East 3 = Far East, Australia and Pacific
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC – SUB AREA	Standard ISO/IATA sub area code		
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC - COUNTRY	The standard IATA country code.		Two alpha IATA country codes.
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC - CITY	The standard industry city code.		Three alpha IATA city codes.
	OFFER GEO SPEC – TRVL WHOLLY WITHIN LOC - STATE	The standard state postal Code.		Two alpha code If coded, it will always be preceded by a country code.
	OFFER GEO SPEC – TRVL WHOLLY WITHIN - COORDINATES	Coordinates (Latitude, Longitude, as defined in the Data Dictionary)		
	<i>POS GEO SPEC : COORDINATE RADIUS</i>	Radius (in miles) to use in conjunction with coordinates above		
R 2.2.4	BAGS - BG	Baggage		X = Permitted N = Not Permitted

	SEATS - SA	Pre-reserved Seat Assignment		X = Permitted N = Not Permitted
	ALL OTHER	ALL OTHER		X = Permitted N = Not Permitted

5.2.1 Scenarios for Profile

The following are for illustrations purpose only and is not intended to fully describe the complexity of a particular Airline Profile.

Scenarios	POS NON GEO : CODE											OFFER GEO SPEC – LOC 1								OFFER GEO SPEC – LOC 2								BAGS - BG	SEATS - SA	ALL OTHER																
	PROFILE OWNER	TVL AGENCY	CXR/GDS	POS GEO SPEC: TYPE	POS GEO SPEC: AREA	POS GEO SPEC: ZONE	POS GEO SPEC: COUNTRY	POS GEO SPEC: CITY	POS GEO SPEC: STATE	POS GEO SPEC: AIRPORT	POS GEO SPEC : COORDINATES	POS NON GEO : TYPE	AGENT PSEUDO CITY CODE	AGENT NUMERIC CODE (IATA NUMBER)	DEPARTMENT/ID ENTIFIER	CRS/CXR DEPARTMENT CODE	LN/IATA NUMBER (CRT ADDRESS)	AIRLINE SPECIFIC CODE	DIRECTIONAL INDICATOR	OFFER GEO SPEC – TYPE	OFFER GEO SPEC – GEOGRAPHIC LOCATION	OFFER GEO SPEC – AREA	OFFER GEO SPEC – ZONE	OFFER GEO SPEC – COUNTRY	OFFER GEO SPEC – CITY	OFFER GEO SPEC – STATE	OFFER GEO SPEC – AIRPORT				OFFER GEO SPEC – COORDINATES	OFFER GEO SPEC – TYPE	OFFER GEO SPEC – GEOGRAPHIC LOCATION	OFFER GEO SPEC – AREA	OFFER GEO SPEC – ZONE	OFFER GEO SPEC – COUNTRY	OFFER GEO SPEC – CITY	OFFER GEO SPEC – STATE	OFFER GEO SPEC – AIRPORT	OFFER GEO SPEC – COORDINATES						
Scenario 1 : I am Alaska Seaplane Service. I only want to receive NDC queries from these Points of Sale: 123456789, 234567891	J5											I		123456789, 234567891																														X	X	X
Scenario 2 : I am Air China. I only want to receive NDC queries for routes from North America to China	CA																			A			TC1							N				CN										X	X	X
Scenario 3 : I am Kenya Airways. I want to receive NDC queries for routes from NBO, from agencies in Kenya only	KQ	X		N			KE												3	C						NBO																	X	X	X	
Scenario 4 : I am LATAM. I want to receive NDC queries, but I don't do seats.	LA																																											X	N	x

Appendix A: Airline Profile Use Cases

UC 1.0: Airline Profile Receiver receiving new or updated Airline Profile – Push model

Use Case Name	Airline Profile Receiver receiving new or updated Airline Profile – Push model
Actors	Airline Profile Sender, Airline Profile Receiver
Description	Airline Profile Receivers receive Profile dataset on a recurring basis
Preconditions	Airline Profile Receiver is subscriber – outside of BRD scope, set-up phase
Precondition Use Cases	
Post conditions	Airline Profile Receiver has current & appropriate Airline Profile
Assumptions	
Normal Course of Events	<ol style="list-style-type: none"> 1. Airline Profile Sender extracts appropriate and current Airline Profile which would include any new, changed or deleted records 2. Airline Profile Sender schedules push 3. Airline Profile Receiver receives pushed Airline Profile or link and applies data using the current version number 4. Airline Profile Receiver sends an acknowledgment message
Data elements for Airline Profile Notification	All data elements of the appropriate profile or a link
Data elements for Airline Profile ACK	Reception status, Profile version number

UC 2.0: Airline Profile Receiver Makes RQ – Pull model

Use Case Name	Airline Profile Receiver Makes RQ
Actors	Airline Profile System, Airline Profile Receiver System
Description	Airline Profile Receiver system makes Request to Airline Profile to determine if query qualifies as NDC for that particular airline
Preconditions	Airline Profile Receiver is approved
Precondition Use Cases	
Post conditions	Airline Profile Receiver gets Airline Profile dataset as a response
Assumptions	
Normal Course of Events	<ol style="list-style-type: none"> 1. Airline Profile Receiver system sends AirlineProfileRQ to Airline Profile System 2. Airline Profile System checks source and sends current and appropriate (ie corresponding to the Airline Profile Receiver) profile via AirlineProfileRS
Data elements for AirlineProfileRQ	IATA code, PCC code (ie identification variables)
Data elements for AirlineProfileRS	All data elements of the appropriate profile or a link
