

U.S. – Mexico Border Environmental Health Initiative

Daniel K. Pearson

U.S. Geological Survey

Texas Water Science Center (Austin, TX)

June 8, 2011

Overview

§ Introduction

§ US/MX Integrated Mapping Databases (2005-current)

§ Border Environmental Health Initiative

§ Related Studies

§ CHIPS – Texas Colonias Database (2007)

§ Santa Cruz Watershed (2009-current)

§ US/MX Border – Mapping Instream River Habitat (2010-current)

§ Conclusions

Geography

The border region of the United States and Mexico encompasses a vast and diverse array of physical settings and habitats that are unique in terms of the diversity of their water, mineral, and biological resources.

Wetlands, Riparian Areas, and Resacas

Mountains and Rangelands

Chihuahuan and Sonoran Deserts

Demographics

- § ~12 million people, extends more than 2,000 miles from the Gulf of Mexico to the Pacific Ocean.
- § 90% of the border population resides in 14 paired, inter-dependent sister cities.
 - § Rapid growth and immigration = unplanned development, greater energy and land demand, traffic congestion, overburdened or unavailable waste treatment and disposal facilities...
- § By 2020 the population is expected to reach 19.4 million.

§ **Border Environmental Health Initiative Goal**

§ To provide science data in support of Environmental Health studies in the U.S.-Mexico Border region to enable scientists, public health officials, resource managers, and concerned citizens to make informed decisions.

§ **Environmental Health**

§ The state of the physical environment as it relates to ecological condition and the well-being of the human population

Project History

§ Started in 2005

§ Interdisciplinary Research (USGS)

§ Included Water, Geology, Geography and Biology

§ Completed in 3 phases

§ Year 1-2 - GIS Database and Web Mapping
Application development

§ Year 3+ - GIS Database Update/Maintenance and
Investigations

§ Topical Studies: Santa Cruz Watershed, PAHO model

Partnerships and Collaboration

- § U.S Geological Survey
- § INEGI (Instituto Nacional de Estadística, Geografía e Informática)
- § CONAGUA (Comisión Nacional de Agua)
- § CILA (Comisión Internacional de Límites y Aguas)
- § IBWC – International Boundary and Water Commission
- § DOI US-MX Border Field Coordinating Committee
- § EPA Border 2012
- § TNRIS – Texas Natural Resource Information System
- § Others

Project Area

U.S.-Mexico border region as delineated by the FCC using watersheds and protected lands (Woodward and Durall 1996).

Specific Objectives

- 1. Develop a bi-national, Web Mapping Application containing natural resource data to help researchers, planners, managers, and concerned citizens make informed decisions.**
- 2. Create a data portal allowing users to integrate the datasets into their own GIS analyses.**
- 3. Investigate linkages between the condition of the physical environment and environmental and human health issues.**

Border Data Integration Challenges

§ Data availability and access

§ Data discrepancies between countries

§ White map syndrome

§ Methods and data formats

§ Translation

§ Growth rate and change

tbl_CNA_parameters : Table

ID	CNA_chemical	CNA_units

Project Website Highlights

§ <http://borderhealth.cr.usgs.gov>

The image displays a screenshot of the USGS website on the left and a web browser window on the right. The website features a navigation menu with the following items: BEHI Home, BEHI Description, BEHI Objectives, Maps & Data, Internet Mapping Service (circled in red), Data Download, Static Map Library, Data Tables, Methods/Documentation, Publications, and Acknowledgements & Links. The browser window shows the URL <http://ftppub.usgs.gov/borderhealth/> and displays a map of the U.S.-Mexico border region. The map includes an 'Overview Map' in the top right corner, which shows a red box indicating the area of the main map. The main map displays landcover and reference layers, with a yellow line highlighting a specific area of interest. The browser window also shows the USGS logo and the text 'U.S. - Mexico Border Environmental Health Initiative'.

Highlighting Bi-National Landcover and Reference Layers

Mapping Application

- § Purpose: Provide visual exploration of project data layers combined with national/international base data layers (USGS NA Atlas and National Map)
- § ESRI ArcGIS Server Application powered by SQL Server database
 - § Enterprise database used for performance and management of application resources
- § Mapping application and project databases hosted at TXWSC

carchule@usgs.gov

Background

The objective of the Border Environmental Health Initiative (BEHI) project is to provide geographic data served over the web, which will allow people to examine the ties between the physical environment and public health issues. The BEHI website is currently available on the Internet at: <http://borderhealth.cr.usgs.gov>. One portion of the data the BEHI is making available for the public to use is the hydrography shared between the United States and Mexico. The geographic display of hydrographic data for the United States and Mexico allows researchers to identify gaps in monitoring networks, ascertain areas of potential contamination or pollution, recognize health concerns connected to the environment, and to potentially discover many other environmental health issues. Hopefully, the identification of these issues will be an incentive for future collaborative work between the United States and Mexico.

Related Studies

CHIPS – Monitoring Colonias along US/MX Border in Texas

§ Colonia Health, Infrastructure and Plating Status tool

§ What is a “colonia“?

§ Residential area along the Texas-Mexico border that lack some of the most basic living necessities, such as potable water and sewer systems, electricity, paved roads, and safe and sanitary housing

CHIPS – Monitoring Colonias along US/MX Border in Texas

- § US HUD, TX Atty General Office, TWDB
- § Relational database built to monitor progress, set infrastructure priorities, measure quality-of-life indicators.
- § Available on BEHI site

Colonia Health risk: Green Yellow Red

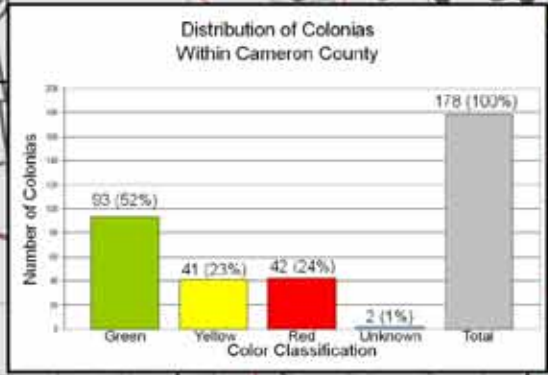

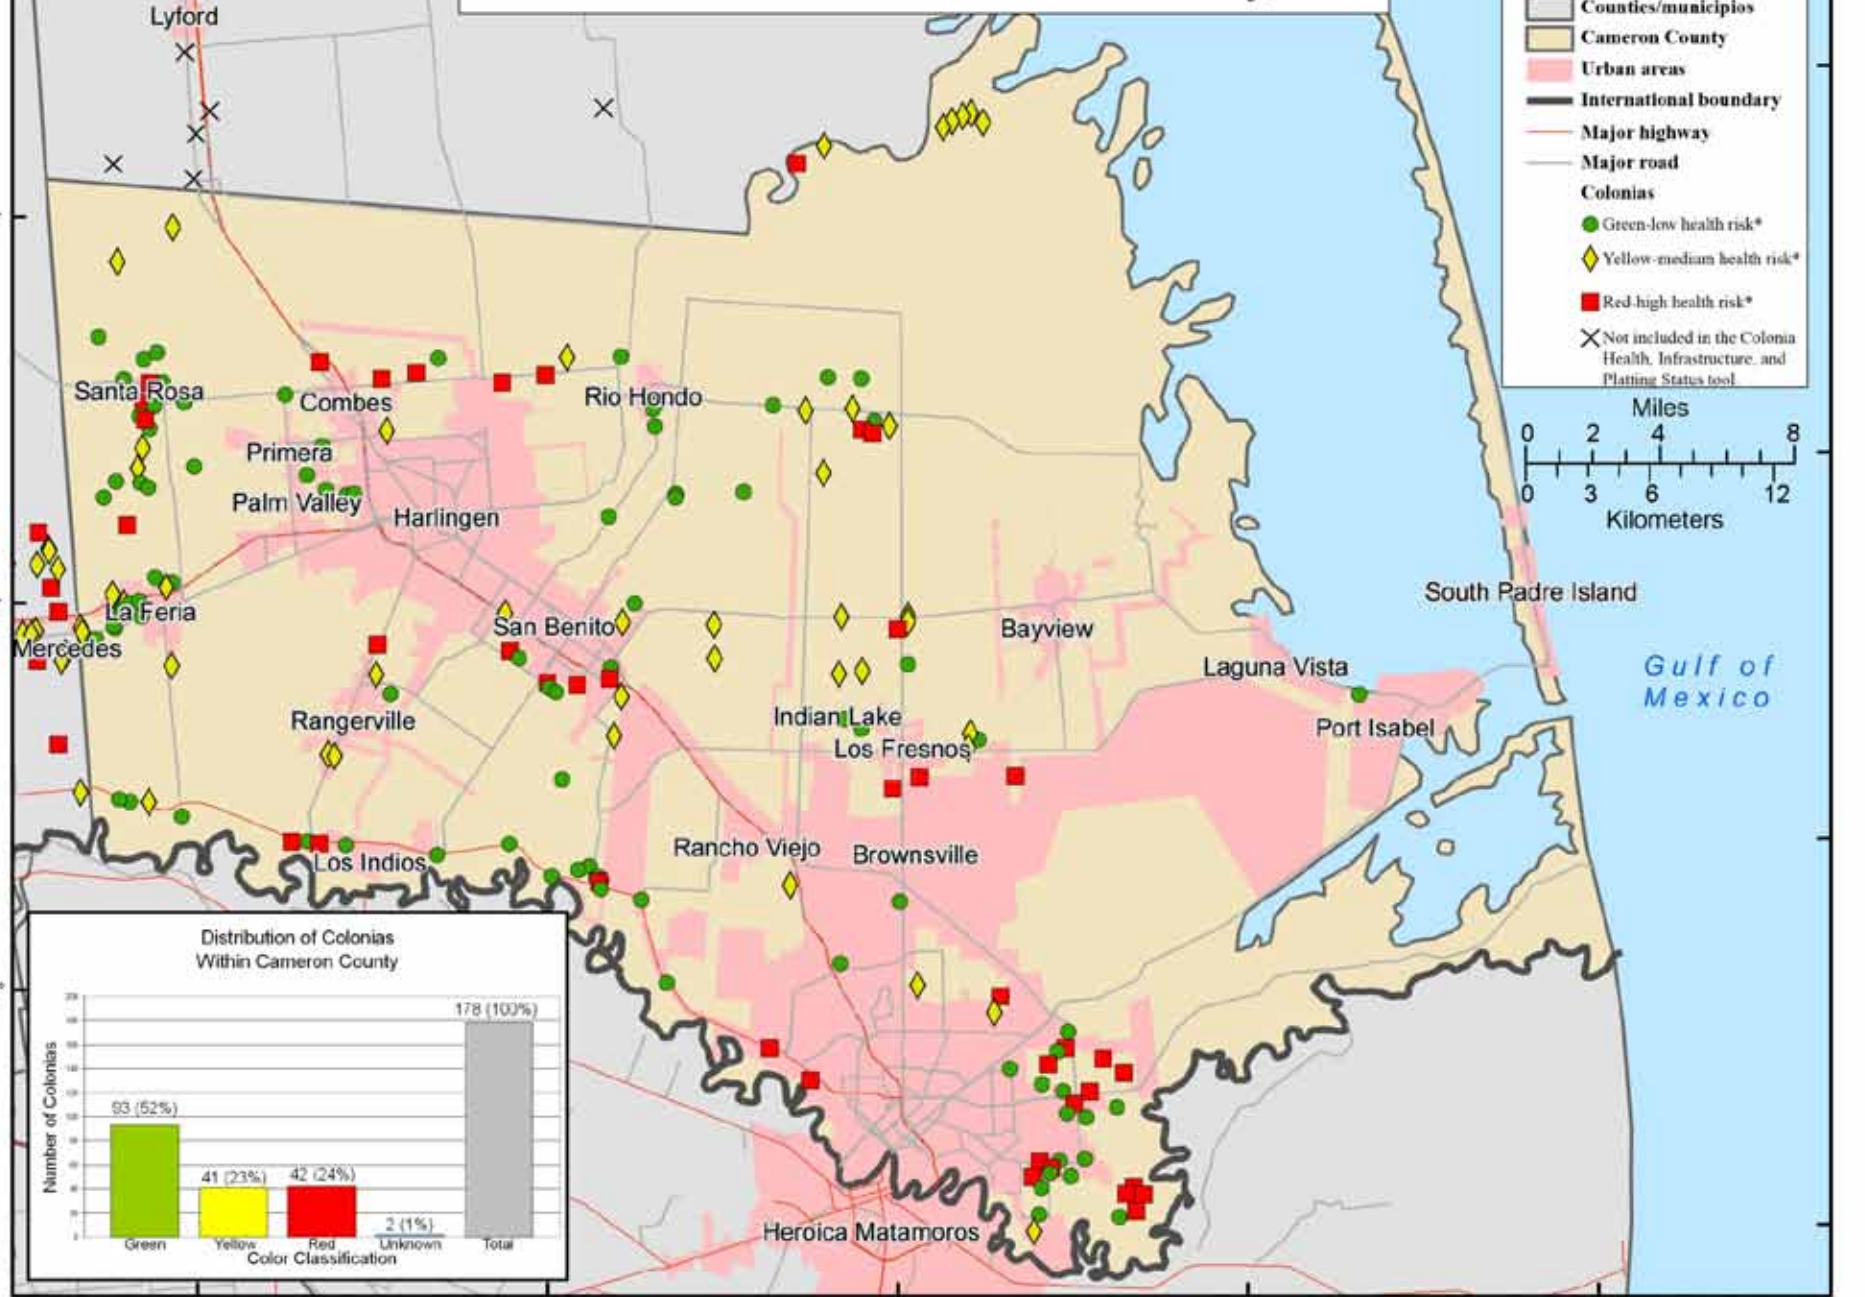

- Explanation**
- **Green Colonias:** Platted colonias with a potable water supply, adequate wastewater disposal, adequate trash collection, paved roads that are passable in all weather conditions, and adequate drainage
 - **Yellow Colonias:** Platted colonias with a potable water supply and adequate wastewater disposal, but have inadequate trash collection, unpaved roads, or inadequate drainage
 - **Red Colonias:** Colonias that are either unplatted, have an inadequate potable water supply, or inadequate wastewater disposal
 - **Unknown Colonias:** Colonias lacking enough information to be classified
 - **Total Colonias:** All colonias including Green, Yellow, Red, and Unknown types

Distribution of Colonias in Cameron County, 2006

EXPLANATION

- Counties/municipios
- Cameron County
- Urban areas
- International boundary
- Major highway
- Major road
- Colonias**
- Green-low health risk*
- Yellow-medium health risk*
- Red-high health risk*
- Not included in the Colonia Health, Infrastructure, and Planning Status tool

Base from U.S. Geological Survey digital data, [various dates], 1:50,000 Albers Equal-Area Conic Projection

Colonia locations mapped by the Office of the Attorney General of Texas, [various dates]
*Classification based on the report titled, "Tracking the progress of state-funded projects that benefit colonias", written by the Office of the Texas Secretary of State, 2006.

Investigation of the Transboundary Santa Cruz Watershed (On-going)

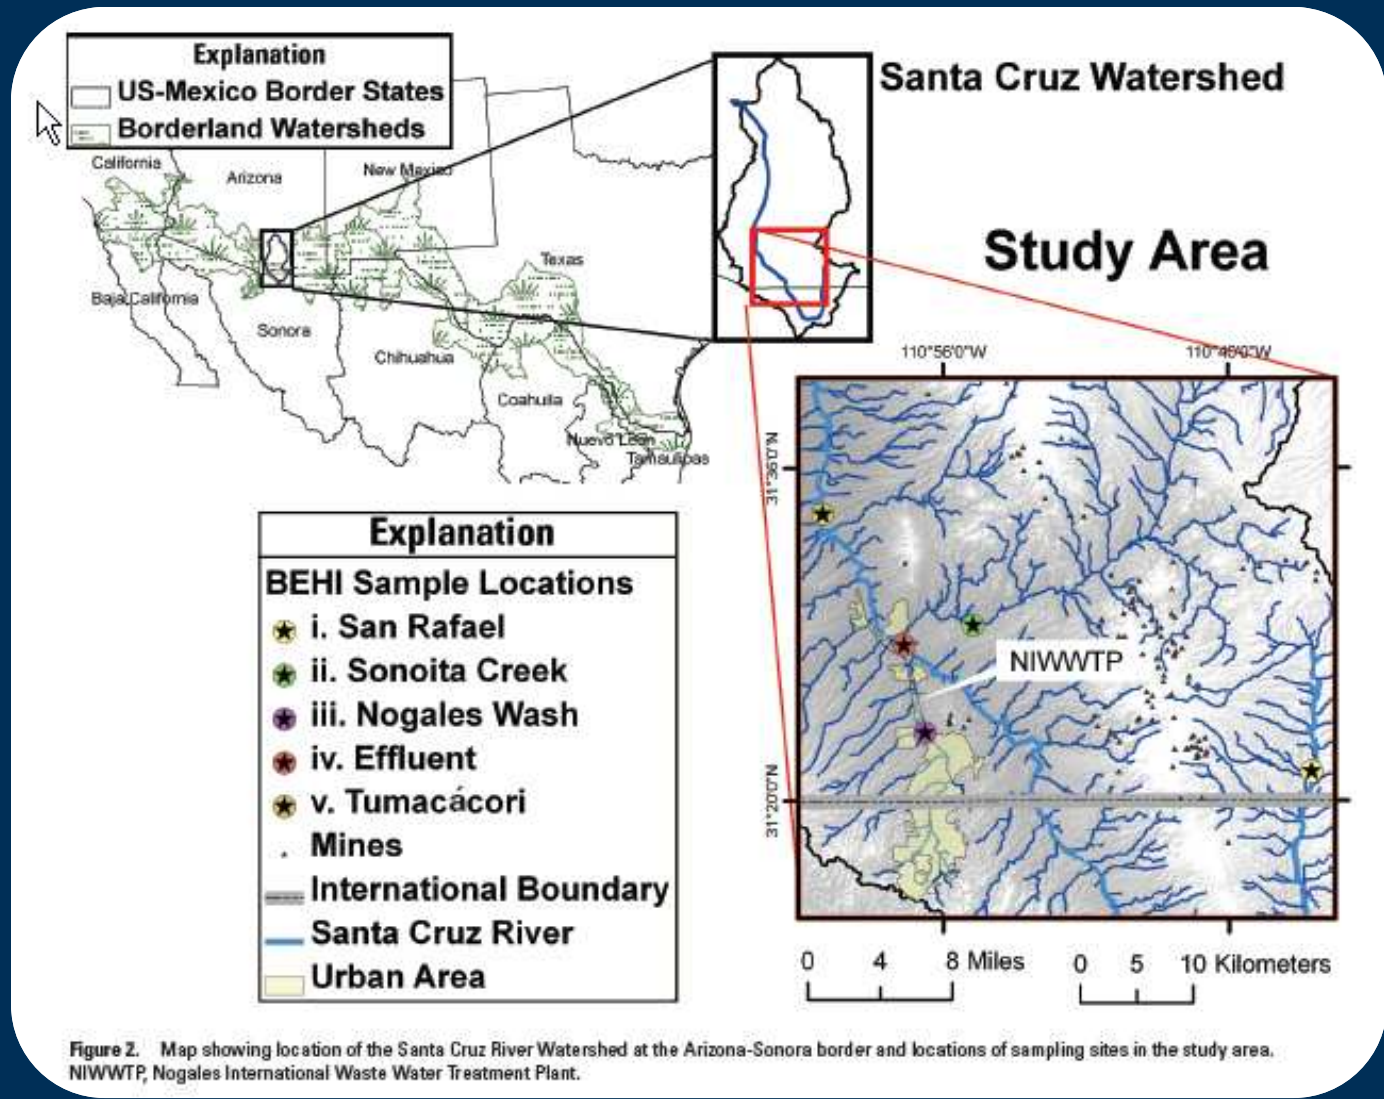

§ Focused, integrated research to develop an understanding of the complex interactions of the groundwater/surface water with the ecosystem it supports and the impacts on human health

Laura M. Norman, James Callegary,
Charles van Riper III, Floyd Gray,
Nicholas V. Paretti and Miguel
Villarreal (USGS Arizona)

<http://pubs.usgs.gov/fs/2010/3097/>

Study Area

More information...

§ Objective

§ to understand and document the complex movement of natural and anthropogenic contaminants through the SCR Watershed

§ Methodology

§ Identify the presence of contaminants/pathogens at select locations in the watershed

§ Map areas of increased risk to animal and human populations

§ Assess the likelihood of the watershed as a source for human and animal pathogens

§ Compare risk patterns in the Watershed to Regional risk

Current Activities

- § Intensive data collection – contaminant and sediment transport
- § SWAT modeling – improve understanding of human affect on aquifer dynamics and contaminant transport, BMPs
- § Contacts: Laura Norman (lnorman@usgs.gov), James Callegary (jcallega@usgs.gov) – USGS Arizona

US/MX Border – Mapping Instream River Habitat

§ 2010 – USGS/USFWS

§ Assess the relation of seasonal flow conditions to available habitat, distribution, and recruitment of Rio Grande silvery minnow in the Big Bend reach of the Rio Grande.

§ Detailed field mapping of the river using high accuracy GPS/GIS.

§ Data acquired will be stored in a geodatabase and presented via on-line mapping application.

RGSM Border Products

§ Mapped units (mesohabitats) will include:

§ fish assemblage

§ physical habitat

§ explanatory spatial variables

§ Report FY12

Realities

§ Growth will continue

§ Natural resources will continue to be stressed

§ Need for geospatial data, updated information and maintenance is high

§ Limited availability of Binational data, coverage

§ Collaboration and data access difficult at times

§ Funding decreasing

Conclusions

- § **BEHI contributions - serve as a pilot effort for management and access of border geospatial data resources**
- § **We need to continue to invest and focus on our Border region to safeguard natural resources vital to biota and urban centers**
- § **Raster and vector data resources valuable for continued monitoring efforts, investment needed in both areas**
