COUNT 6: ILLEGAL STORAGE OF AMMONIA 22-11-20-6 A/M

On March 20, 2012 at approximately 3:00 pm I was dispatched to CR 175 E south of CR 1200 N Parke Co. reference a meth lab. Trooper **MIKE WOOD** with the Indiana State Police and I spoke with Parke County Deputy **KYLE STONEBRAKER** and Deputy **JUSTIN COLE**. They advised they followed the suspects when they purchased items to manufacture meth which led them to the field at CR 175 E south of CR 1200 N.

A Hazardous Material site safety assessment was performed at approximately 04:00 PM at the location and the surrounding area. This assessment revealed sources or potential sources of the following chemicals: 1) Lithium. 2) LYE. 3) Anhydrous Ammonia. 4)Camp Fuel. Other items located were clear length rubber tubing, white coffee filters, lithium batteries, ephedrine pill box, Instant Cold Pack, glass jar, and plastic bottles. All evidence was secured and signed over to Deputy Stonebraker.

Methamphetamine is a Schedule II Controlled Substance. A common method used to manufacture this compound involves the following procedure. Ephedrine/Pseudoephedrine is extracted form over the counter preparations, which are then combined with anhydrous ammonia/ammonia solution and lithium to produce methamphetamine. The finished product is obtained by extraction using organic solvents. The presence of these chemicals and supplies is consistent with the manufacture of methamphetamine. All items were collected as evidence and were photographed in place and inventoried (See P.R.&R. 1,2, and 3).
