

AMERICA'S REAL ESTATE ACADEMY, INC.

HOME INSPECTION CERTIFICATE PROGRAM

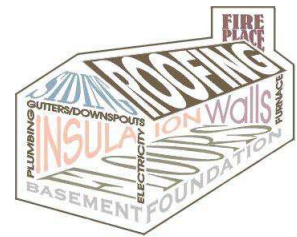

Introduction to Home Inspection & Residential Construction

The certificate program begins with an overview of the home inspection process, types of business formation, business operation, marketing, the home inspector's role in the real estate transaction, tools needed, and a review of residential construction from footers to roof rafters covering the construction process, stages, required inspections, and associated residential construction trades.

Home Inspection Methods

This section of the program will cover the details of making the inspection – what to inspect; how to inspect; and how to report – including lot, landscape, and grading; foundation; walls, windows, and doors; attics, basements, and crawl spaces; garages and swimming pools; pest infestation; mechanical systems (electrical, plumbing, cooling, and heating systems); and energy and environmental concerns. Comprehensive review of building systems.

Building Code Overview

The inspection program concludes with a highlight of important international residential code requirements and reviews common code and safety violations that should be discovered by home inspectors and real estate professionals. Material is presented in an understandable format and students will receive a Code Check book for their future use. The course will touch on all four of the code compliance topics including building, electrical, HVAC, and plumbing.
