

2 Masters Series Webinar: Know Your Bacteria

Tom Nabors, DDS
OralDNA

1. Patients with identical clinical presentations may respond differently to the same therapy.
 - True
 - False

2. Characteristics of the host biofilm and inflammatory and immune responses tend to vary among individuals.
 - True
 - False

3. Chronic periodontitis, the most common form of periodontitis, is considered to be an inflammatory disease that is caused by:
 - Plaque and calculus
 - Poor home care (lack of brushing and flossing)
 - Pathogenic bacteria of sufficient concentration in a biofilm
 - Materia alba

4. Which of the following is important during the treatment phase as well as the maintenance phase of periodontal therapy:
 - Daily disruption of both supra and subgingival biofilm
 - The use of a safe and effective antimicrobial
 - How often patients return for maintenance and evaluation
 - All of the above

5. The host immune response provides evidence as to which organisms in the biofilm are activating an inflammatory immune response.
 - True
 - False
