MANAGEMENT DISCUSSION AND ANALYSIS REPORT

I. OVERALL VIEW

In spite of the adverse market conditions prevailing the overall performance of the Company during the period has considerably improved compared to that of the previous year.

The global economic outlook remained uncertain and challenging with a growth of about three per cent in 2013. There were many reasons for this sluggishness including weak recovery in the US and Europe and a general economic slowdown in emerging economies like China and India.

There was no turnaround in the domestic economy in either consumption or investment as was reflected by the downward trend in both the capital and consumer goods segments. The high borrowing cost to combat inflation, coupled with lower consumption, low investment in infrastructure and other sectors of the economy were responsible for this, although agriculture and allied businesses had shown some improvement. Foreign Institutional Investors (FIIs) were record buyers of Indian debt instruments in the quarter ended March 2014, reflecting increased confidence in India's long-term economic prospects although growth is yet to show any definite signs of emerging from a slump. The Rupee has recently strengthened against the US Dollar which might adversely affect exports from India.

It is expected that the economy would grow in the coming years and the demand for prices of textile products would improve which will enable the Company to regain steady or better performance.

The circumstances prevailing in business segments of the Company and their operations are discussed hereunder.

II. Business Segment - Textiles & Filament Yarns:

a) Industry Structure & Development:

Raw material costs have been increasing globally, coupled with a shortage of skilled workers. While a shift is taking place of textiles industries from China and Bangladesh to India, the industrial climate in India has also become adverse due to regular increases in input costs. Any further appreciation of the Rupee will adversely affect exports from India. Though the spinning industry has fared somewhat better those with a presence in weaving, processing or even composite businesses are facing the heat due to increases in input cost without being able to pass on such higher costs to customers as the market is simply unable to absorb the same.

b) Opportunities and Threats:

There is good scope for growth for the textile industry as India's share in the global trade in textiles is weak compared to other countries. The free trade environment is a great opportunity for the Indian textile industry to increase its share in the global market. Chinese exports are slowing down on account of various factors inclusive of increase in domestic demand and rising costs. This is a good opportunity of which our textile industry should make use but smaller countries like Bangladesh, Sri Lanka, Pakistan, Turkey and Vietnam etc. are becoming formidable challengers.

Lack of uninterrupted power, increased power costs, higher transaction costs, and high cost of labour is hindering the progress. However, we are making all out efforts to cope with all these challenges by continuous efforts at cost reduction, process improvements, diversification of products and improving productivity by improving efficiencies.

c) Segmental Review and Analysis:

The financial performance of our textile has stabilized and is showing improvements including in capacity utilization. As a result, the sales have improved aided by increasing demand in the domestic and U.S. Markets. The demand for premium branded goods is healthier and we are concentrating on high priced premium goods. The performance of the yarn Division remained fairly stable. Since April, 2014, the yarn market is depressed but it is hoped that it should improve in the current year.

We have, therefore, changed the product pattern based on cotton and synthetic fabric which is in demand and which customers have been seen to prefer in adverse market conditions. Considering the challenges that exist, the financial results of this division are satisfactory.

d) Risks and Concerns:

The fluctuation in the currency especially against the dollar is becoming problematic for long term booking of orders. Cotton prices are increasing regularly as are other input costs including power and logistics.

e) Outlook:

Our textile products have in the current year found acceptance by major international brands and also domestic players for all the products which also has the added beneficial effects of strengthening the quality / design and innovations in the product. 2014- 2015 may see better performance in India and possibly a stronger performing world economy.

III. Internal Control Systems

The Company has a well established framework of internal controls in all areas of its operations, including suitable monitoring procedures and competent and qualified personnel. In addition to statutory audit, financial controls are reviewed by independent agency of internal auditors, who report their findings to the Audit Committee of the Board. The Company conducts its business with integrity and high standard of ethical behavior and in compliance with the laws and regulations.

IV. HUMAN RESOURCES

The Company continued to enjoy healthy industrial relations during the period.
