Producer Price Indexes – January 2009

The Producer Price Index for Finished Goods rose 0.8 percent in January, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This increase followed declines of 1.9 percent in December and 2.5 percent in November. At the earlier stages of processing, the decrease in prices for intermediate materials slowed to 0.7 percent from 4.2 percent in the prior month, and the index for crude materials declined 2.9 percent after dropping 5.3 percent in December. (See table A.)

The upturn in the index for finished goods was led by the index for energy goods, which increased 3.7 percent after falling 9.1 percent in December. Price declines for finished consumer foods slowed to 0.4 percent in January from 1.4 percent in the preceding month. The index for finished goods less foods and energy increased 0.4 percent following a 0.2-percent rise a month earlier.

Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted

Month	Finished goods					Intermediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy	Change in finished goods from 12 months ago (unadj.)

2009							
Jan.....	0.8	-0.4	3.7	0.4	-1.0	-0.7	-2.9

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2008. In addition, indexes for September 2008 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 0.9 percent in January to 170.3 (1982 = 100). From January 2008 to January 2009, the index for finished goods moved down 1.0 percent. Over the same period, prices for finished energy goods fell 18.4 percent. By contrast, partially offsetting the decrease in finished goods prices, the index for finished goods less foods and energy rose 4.2 percent and prices for finished consumer foods increased 1.8 percent. For the 12 months ended January 2009, the index for intermediate goods decreased 3.5 percent and prices for crude goods dropped 29.1 percent.

Finished goods

The index for finished energy goods turned up 3.7 percent in January after falling 9.1 percent a month earlier. The index for gasoline increased 15.0 percent after dropping 26.2 percent in the preceding month. Prices for liquefied petroleum gas, home heating oil, and kerosene also turned up after declining in December. The indexes for diesel fuel and residential natural gas fell less than in the prior month. Conversely, partially offsetting the upturn in finished energy goods prices, the rise in the index for residential electric power slowed to 0.3 percent from 0.5 percent in December. Prices for asphalt fell more than in the prior month. (See table 2.)

The decline in the index for finished consumer foods slowed to 0.4 percent in January from 1.4 percent in the prior month. The index for fluid milk products fell 0.6 percent following a 5.3-percent decrease in December. Prices for fresh vegetables (except potatoes), processed young chickens, eggs for fresh use, canned carbonated soft drinks, and raspberries turned up after declining a month earlier. Conversely, the index for natural cheese (except cottage cheese) dropped 18.6 percent following a 3.4-percent rise in the preceding month. Prices for pork also turned down in January and the index for beef and veal fell more than in December.

Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted

Month	Intermediate goods				Crude goods			
	Foods	Energy	Except foods and energy	Change in intermediate goods from 12 months ago (unadj.)	Foods	Energy	Except foods and energy	Change in crude goods from 12 months ago (unadj.)
2008								
Jan.....	3.4	1.6	0.9	8.9	3.1	1.7	4.9	30.8
Feb.....	2.5	1.5	0.7	9.0	0.8	6.6	3.9	24.6
Mar.....	3.0	5.3	1.2	10.7	2.2	11.5	3.8	29.7
Apr.....	0.1	0.0	1.4	10.8	-0.6	6.3	10.2	34.5
May.....	1.9	5.6	1.6	12.7	0.5	11.6	1.7	40.9
June.....	1.1	4.1	1.4	14.7	2.2	3.8	0.5	43.6

Dec.....	-3.3	-9.8	-2.9	-1.7	-5.5	-5.9	-2.2	-25.0
2009								
Jan.....	-2.2	1.5	-1.1	-3.5	1.0	-8.1	0.1	-29.1

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2008. In addition, indexes for September 2008 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

The rise in the index for finished goods less foods and energy accelerated to 0.4 percent in January from 0.2 percent in the previous month. The index for toys, sporting goods, and small arms turned up 4.4 percent after falling 0.8 percent in December. Prices for communication and related equipment, alcoholic beverages, and commercial furniture also increased after declining in the prior month. The index for consumer plastic products fell less in January, and prices for office and store machines and equipment rose after no change in December. By contrast, the advance in the index for passenger cars slowed to 0.3 percent from 1.5 percent in the prior month. Prices for soap and synthetic detergents turned down after rising in December.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components fell 0.7 percent in January following a 4.2-percent decrease in December. Prices for materials for durable manufacturing, intermediate foods and feeds, and materials and components for construction all declined less than they had a month earlier, while the indexes for intermediate energy goods and materials for nondurable manufacturing turned up in January. Excluding foods and energy, prices for intermediate goods moved down 1.1 percent compared with a 2.9-percent decrease in the prior month. (See table B.)

The index for materials for durable manufacturing moved down 3.5 percent in January following a 7.2-percent decrease in December. Prices for hot rolled steel sheet and strip fell 6.8 percent after dropping 23.9 percent in the prior month. Similarly, the indexes for cold rolled steel sheet and strip; hot rolled steel bars, plates, and structural shapes; copper and brass mill shapes; primary nonferrous metals; and thermoplastic resins and plastic materials also decreased less than a month earlier. Prices for cold finished steel bars turned up in January. By contrast, partially offsetting the slower rate of decline in prices for materials for durable manufacturing, the index for semifinished steel mill products moved down 13.8 percent subsequent to a 7.6-percent decrease in December. Prices for steel pipe and tube and for aluminum mill shapes also fell more in January than they had in the preceding month. (See table 2.)

The index for intermediate energy goods rose 1.5 percent in January after falling 9.8 percent a month earlier. Prices for liquefied petroleum gas climbed 20.2 percent compared with a 21.8-percent decrease in December. The indexes for gasoline, heating oil, and residual fuels also turned up in January. Prices for both diesel and jet fuel declined less than they had in December. By contrast, the electric power index fell 0.9 percent after advancing 0.6 percent in the prior month. Prices for natural gas to electric utilities and commercial natural gas also turned down in January.

The index for materials for nondurable manufacturing edged up 0.1 percent in January after decreasing 9.1 percent in December. Leading this upturn, prices for basic organic chemicals rose 0.7 percent in January following a 17.8-percent drop a month earlier. The indexes for medicinal and botanical chemicals and for finished fabrics also turned up after falling in December. Prices for thermoplastic resins and plastic materials and for inedible fats and oils declined less in January than they had in the prior month. By contrast, the index for agricultural chemicals and chemical products moved down 14.5 percent subsequent to an 8.2-percent decrease in December. Prices for synthetic rubber also fell more than they had in the previous month. The index for knit gray fabrics rose less than a month earlier.

The intermediate foods and feeds index moved down 2.2 percent following a 3.3-percent decline in December. In January, falling prices for natural cheese (except cottage cheese), beef and veal, processed cheese and related products, fats and oils, processed eggs, bulk fluid milk and cream, and pork outweighed rising prices for processed young chickens.

The index for materials and components for construction moved down 0.7 percent after falling 1.2 percent in December. Prices for paving mixtures and blocks declined 6.2 percent in January subsequent to an 8.3-percent drop a month earlier. The index for sheet metal products also decreased less than in the prior month. The indexes for plastic construction products and for prefabricated wood buildings and components advanced after falling in December. Prices for ready-mixed concrete rose more than they had in the previous month. Conversely, the index for structural, architectural, and pre-engineered metal products decreased 2.6 percent compared with a 1.1-percent decline in December. Prices for treated wood products turned down in January, and the index for prepared paint rose less than in the preceding month.

Crude goods

The Producer Price Index for Crude Materials for Further Processing fell 2.9 percent in January following a 5.3-percent decline in December. In January, lower prices for crude energy materials outweighed higher prices for crude foodstuffs and feedstuffs and for crude nonfood materials less energy. (See table B.)

The index for crude energy materials decreased 8.1 percent in January after falling 5.9 percent in the previous month. Natural gas prices dropped 7.8 percent compared with a 14.7-percent increase in the preceding month. The coal index turned down 2.0 percent following a 0.5-percent gain in December. By contrast, partially offsetting the faster rate of decline in the crude energy materials index, prices for crude petroleum declined 12.5 percent in January after falling 31.0 percent a month earlier. (See table 2.)

The index for crude foodstuffs and feedstuffs advanced 1.0 percent following a 5.5-percent decrease in December. Slaughter cattle prices rose 1.1 percent in January subsequent to an 8.9-percent decline in the prior month. The indexes for corn, soybeans, and fresh vegetables (except potatoes) also turned up in January. Prices for slaughter barrows and gilts rose more than in December. By contrast, prices for slaughter chickens fell 7.2 percent following a 6.9-percent increase a month earlier. The indexes for Irish potatoes for processing and tree nuts also turned down after rising in December. Fluid milk prices decreased more than they had in the previous month.

The index for crude nonfood materials less energy edged up 0.1 percent in January subsequent to a 2.2-percent decline in December. The increase in iron and steel scrap prices accelerated to 21.9 percent from 13.8 percent in the preceding month. The index for gold ores also advanced more than it had a month earlier. Prices for corn, wheat, and soybeans for nonfood manufacturing turned up in January. By contrast, the index for hides and skins dropped 36.0 percent in January after decreasing 7.5 percent in December. Prices for raw cotton and for construction sand, gravel, and crushed stone turned down in January. The index for aluminum base scrap fell more than it had in December.

Net output price indexes

Mining, Utilities, and Manufacturing Industries. The Producer Price Index for the Net Output of Total Mining, Utilities, and Manufacturing Industries inched up 0.1 percent in January following a 2.8-percent decrease in December. (Net output price indexes are not seasonally adjusted.) Most of this upturn can be traced to prices received by petroleum refineries, which advanced 8.1 percent in January after falling 26.4 percent in the prior month. The industry indexes for poultry processing and farm-feed manufacturing also increased following December declines. Prices received by petrochemical manufacturers decreased less in January than they had a month earlier, and the industry index for soft drink manufacturing climbed more than in December. By contrast, partially offsetting the upturn in the index for total mining, utilities, and manufacturing industries, prices received by cheese manufacturers fell 14.8 percent in January after rising 2.4 percent in the preceding month. The indexes for livestock slaughtering and for electric power generation, transmission, and distribution decreased more than they had in December. Prices received by pharmaceutical preparation manufacturers rose less than in the preceding month. In January, the index for total mining, utilities, and manufacturing industries was 105.2 (December 2006 = 100), 1.9 percent below its year-ago level.

Trade Industries. The Producer Price Index for the Net Output of Total Trade Industries declined 0.3 percent in January following a 0.5-percent advance in the preceding month. (Trade indexes measure changes in margins received by wholesalers and retailers.) Leading this downturn, margins received by merchant wholesalers of nondurable goods fell 2.3 percent after rising 4.6 percent in December. The margin indexes for department stores, gasoline stations with convenience stores, and fuel dealers also decreased following increases in the prior month. Conversely, margins received by gasoline stations without convenience stores jumped 10.3 percent following a 21.0-percent decrease in the prior month. The margin indexes for home centers, electronic shopping and mail-order houses, supermarkets, and new car dealers also turned up in January after falling in December. Margins received by merchant wholesalers of durable goods rose more than they had in the previous month. In January, the index for total trade industries was 110.8 (December 2006 = 100), 5.3 percent above its year-ago level.

Transportation and Warehousing Industries. The Producer Price Index for the Net Output of Total Transportation and Warehousing Industries declined 0.8 percent in January following a 2.8-percent drop in December. Prices received by the air transportation industry group edged down 0.1 percent in January after falling 4.2 percent in the preceding month. The index for couriers and messengers also decreased less than it had in December. Prices received by the general freight trucking industry group and by the inland water freight transportation industry turned up in January. By contrast, the index for the line-haul railroad industry moved down 4.3 percent following a 2.5-percent decline in December. Prices received by the industry for local specialized freight trucking of new goods also decreased more in January than in the previous month. The indexes for deep sea freight transportation and freight transportation arrangement fell after no change in December. In January, the index for total transportation and warehousing industries was 108.6 (December 2006 = 100), 0.3 percent above its year-ago level.

Total Traditional Service Industries. The Producer Price Index for the Net Output of Total Traditional Service Industries advanced 0.4 percent in January following a 0.8-percent decline in December. Prices received by the industry for investment banking and securities dealing increased 7.0 percent after falling 2.0 percent a month earlier. The indexes for automotive equipment rental and leasing, software publishers, and offices of lawyers also turned up in January. Prices received by the depository credit intermediation industry group were unchanged following decreases in December. The index for direct health and medical insurance carriers rose more in January than it had in the prior month. Conversely, prices received by real estate agents and brokers fell 4.5 percent in January after declining 0.6 percent in December. Prices received by the industries for temporary help services moved down in January after rising in December. In January, the index for total traditional service industries was 102.3 (December 2006 = 100), unchanged from its year-ago level.

Producer Price Index data for February 2009 are scheduled to be released on Tuesday, March 17, 2009 at 8:30 a.m. (EDT).

PPI Commodity Weight Allocations to Stage-of-Processing Indexes Updated

Effective with the release of January 2009 data on February 19, 2009, the Bureau of Labor Statistics updated the weight allocations used to calculate its stage-of-processing (SOP) indexes to more accurately reflect recent sales patterns. While PPI weights continue to be based on shipment values from the 2002 economic census, the proportion of these weights allocated to the various SOP categories within and, in some cases, across the Finished, Intermediate, and Crude goods stages have changed. The new allocations are based primarily on data contained in the 2002 Input/Output Accounts published by the Bureau of Economic Analysis.

It is important to note that the allocation update does not change the PPI classification system, reference base, or aggregation structure. It has, however, resulted in significant shifts in the relative importance of some component series in the stage-of-processing model. A detailed explanation of the SOP allocation update is available on the BLS Web site at: <http://www.bls.gov/ppi/ppisopallo.htm>.

Relative importance figures as of December 2008, are available on the BLS Web site at: www.bls.gov/ppi. Choose the "PPI Tables" link, under the "On This Page" heading. The revised SOP relative importance figures will be available through the links: "Component series by stage of processing" and "Commodity groupings by major stage of processing category." The information may also be requested from the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information, at 202-691-7705. For further information on this change, please contact Jon Weinhagen at (202) 691-7709.

Resampling of Industries

Effective with this release, the Producer Price Index (PPI) includes data for 42 resampled industries classified according to the North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific index additions, deletions, and recodes that are effective with this semiannual update, see the January 2009 issue of the *PPI Detailed Report* online at <http://www.bls.gov/ppi/ppidr200901.pdf>, or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Recalculation of Seasonal Adjustment Factors

Effective with this release, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2008 for stage-of-processing (SOP) and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 2004 through December 2008. Revised seasonally adjusted data for this period, as well as seasonal adjustment factors for commodity indexes to be used through December 2009, were released February 17, 2009. To obtain this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705, or visit the Producer Price Index homepage at www.bls.gov/ppi.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2008, based on former and recalculated seasonal factors. These percent changes include final price data through August 2008 and may differ from values shown in tables A and B of this release, which include final price data through September 2008.

Over-the-month percent changes in major stage-of-processing indexes, seasonally adjusted, using former and recalculated seasonal factors for 2008

	Finished goods		Intermediate goods		Crude goods	
Month	Former	Recalculated	Former	Recalculated	Former	Recalculated

December	-1.9	-1.9	-4.2	-4.2	-5.3	-5.3

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (two-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (six-digit codes), item groupings (seven-digit codes) and individual items (eight-digit codes).

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Service sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 2002 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2002 through December

2006, PPI weights were derived from 1997 shipment values. Industry indexes now are calculated with 2002 weights and 1997 net output ratios. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14_etc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, on the Web at www.bls.gov/ppi/ppiescalation.htm. Reprints are available on request.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 800 seasonally adjusted series, only 16 were subject to intervention in 2008.

For more information relating to seasonal adjustment methods, see (1) “Appendix A: Seasonal Adjustment Methodology at BLS,” in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 2.1 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2007.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). Clicking on the “PPI Databases” link reveals the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These

applications guide a user through the PPI classification system by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.

There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and stage-of-processing indexes, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code,

current NAICS series

pcu325---325---

pcu336110336110

pcu621111621111411

pcu325412325412A

Provides data for:

Chemical manufacturing, not seasonally adjusted
Automobile and light duty motor vehicle

manufacturing
Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

Industry-product code,

discontinued SIC series

pdu28_#

pdu331_#

pdu3711#111

Provides data for:

Chemicals and allied products, not seasonally adjusted

Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted

Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code,

discontinued NAICS series

ndu212231212231

ndu2122312122312

ndu212231212231214

Provides data for

Lead ore and zinc ore mining

Lead and zinc concentrates

Lead concentrates

- **Text Files (FTP)** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP sites can be accessed at **ftp://ftp.bls.gov** or directly from the links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

Directory:

Industry Data **/pub/time.series/pc**

Industry Data - Discontinued (NAICS basis) **/pub/time.series/nd**

(SIC basis) **/pub/time.series/pd**

Commodity Data **/pub/time.series/wp**

Commodity Data - Discontinued Series **/pub/time.series/wd**

Special requests **/pub/special.requests/ppi**

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, the **overview.txt** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data, the program help file is **wp.txt**; for discontinued commodity series, **wd.txt**; for current industry-based PPI data based on NAICS, **pc.txt**; for industry-based SIC time series that have been discontinued, **pd.txt**; and for industry-based NAICS series that have been discontinued, **nd.txt**.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled **/pub/time.series/compressed/tape.format/** on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (**www.bls.gov**). Clicking on the “Databases & Tables” tab at the top of the homepage calls up a listing all available BLS programs.

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the

statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.

1 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

2 The indexes for September 2008 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3 Includes crude petroleum.

4 Excludes crude petroleum.

5 Percent of total finished goods.

6 Percent of total intermediate materials.

7 Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

8 Percent of total crude materials.

Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing

[1982=100, unless otherwise indicated]

Grouping	Commodity code	Unadjusted index			Unadjusted percent change to Jan. 2009 from:		Seasonally adjusted percent change from:		
		Sept. 2008 ¹	Dec. 2008 ¹	Jan. 2009 ¹	Jan. 2008	Dec. 2008	Oct. to Nov.	Nov. to Dec.	Dec. to Jan.
Finished goods.....		182.2	168.8	170.3	-1.0	0.9	-2.5	-1.9	0.8
Finished consumer goods.....		193.0	173.8	175.7	-2.4	1.1	-3.2	-2.5	1.0
Finished consumer foods.....		181.5	178.5	177.6	1.8	-0.5	0.2	-1.4	-0.4
Fresh fruits and melons ²	01-11	112.7	113.6	112.0	-24.2	-1.4	2.1	5.8	-1.4
Fresh and dry vegetables ²	01-13	178.3	161.2	171.9	-9.6	6.6	3.8	-14.9	6.6
Eggs for fresh use (Dec 1991=100).....	01-71-07	150.6	143.4	148.7	-20.1	3.7	-14.6	-7.0	10.3
Bakery products ²	02-11	241.0	245.1	245.2	7.4	0.0	0.8	0.4	0.0

Amusement and theme parks.....	71311	06/06	111.3	111.1	111.3	2.7	0.2
Golf courses and country clubs.....	71391	12/05	107.0	106.8	108.2	2.2	1.3
Fitness and recreational sports centers.....	71394	12/04	100.6	100.2	100.4	-0.7	0.2
Accommodation.....	721	12/96	146.9	144.3	142.4	-2.1	-1.3
Commercial machinery repair and maintenance.....	8113	06/06	106.3	106.3	106.5	2.7	0.2

1 Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2 The indexes for September 2008 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

"-" Data not available.

NOTE: NAICS replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

Table 5. Producer price indexes by stage of processing, seasonally adjusted
[1982=100]

Grouping	Index ¹					
	Aug. 2008	Sept. 2008	Oct. 2008	Nov. 2008	Dec. 2008	Jan. 2009
Finished goods.....	182.5	182.3	177.3	172.9	169.7	171.1
Finished consumer goods.....	193.1	192.7	185.6	179.6	175.1	176.8
Finished consumer foods.....	181.2	181.2	181.2	181.5	179.0	178.3
Crude.....	168.2	173.0	177.0	177.5	158.1	170.1
Processed.....	182.3	181.9	181.4	181.7	180.8	178.7
Finished consumer goods, excluding foods.....	197.3	196.8	186.9	178.3	173.0	175.5
Nondurable goods less foods.....	222.1	221.1	205.8	192.9	184.5	188.1
Durable goods.....	141.8	142.3	142.7	142.5	143.1	143.7
Capital equipment.....	154.8	155.4	156.0	156.2	156.4	157.2
Manufacturing industries.....	158.7	159.2	159.9	159.8	159.7	160.2
Nonmanufacturing industries.....	153.3	153.9	154.6	154.8	155.1	156.0
Intermediate materials, supplies, and components.....	198.3	197.1	189.6	181.4	173.7	172.5
Materials and components for manufacturing.....	188.8	186.9	181.9	173.7	164.9	163.1
Materials for food manufacturing.....	186.3	184.4	179.3	178.3	173.0	167.7
Materials for nondurable manufacturing.....	239.1	235.2	226.0	207.3	188.4	188.5
Materials for durable manufacturing.....	219.0	214.7	204.5	192.0	178.1	171.9
Components for manufacturing.....	141.9	142.4	142.6	142.4	142.0	141.7
Materials and components for construction.....	212.8	213.9	213.0	210.4	207.8	206.3
Processed fuels and lubricants.....	218.5	216.0	191.4	172.5	157.8	157.8
Manufacturing industries.....	210.2	208.6	188.4	170.1	159.2	160.1
Nonmanufacturing industries.....	222.9	220.0	193.6	174.3	158.0	157.6
Containers.....	194.9	198.0	199.0	199.0	198.0	197.8
Supplies.....	178.8	178.9	177.8	176.1	174.1	173.3
Manufacturing industries.....	172.9	173.7	173.9	173.7	173.1	170.7
Nonmanufacturing industries.....	178.8	178.7	177.3	175.2	173.0	172.3
Feeds.....	205.2	197.4	183.2	172.5	165.5	165.9
Other supplies.....	177.0	177.8	177.8	176.6	174.9	174.2
Crude materials for further processing.....	273.0	253.1	209.5	183.0	173.3	168.2
Foodstuffs and feedstuffs.....	167.8	165.6	148.1	146.5	138.4	139.8
Nonfood materials.....	350.4	314.8	249.6	200.7	190.4	179.6
Nonfood materials except fuel ²	357.8	324.3	257.2	193.2	164.1	156.5
Manufacturing ²	333.5	302.0	238.9	178.7	151.4	144.0
Construction.....	200.2	199.9	200.4	196.0	193.6	194.0
Crude fuel ³	309.8	273.4	216.5	197.8	220.8	205.8
Manufacturing industries.....	294.6	261.1	208.6	191.4	212.7	202.2
Nonmanufacturing industries.....	316.7	279.4	221.1	201.8	225.5	210.0
Special groupings						
Finished goods, excluding foods.....	182.5	182.3	175.9	170.3	166.9	168.8
Intermediate materials less foods and feeds.....	198.6	197.6	190.2	181.8	173.9	173.0
Intermediate foods and feeds.....	193.6	189.6	181.3	176.9	171.0	167.3
Crude materials less agricultural products ²	360.6	323.4	255.7	206.0	195.9	183.9
Finished energy goods.....	196.0	193.4	168.7	147.8	134.3	139.3
Finished goods less energy.....	171.4	172.0	172.4	172.6	172.2	172.5
Finished consumer goods less energy.....	178.8	179.4	179.7	179.9	179.2	179.4
Finished goods less foods and energy.....	168.5	169.2	169.8	169.9	170.3	171.0
Finished consumer goods less foods and energy.....	177.7	178.6	179.2	179.3	179.8	180.4
Consumer nondurable goods less foods and energy.....	208.6	209.8	210.6	211.1	211.3	212.1
Intermediate energy goods.....	224.7	219.2	195.0	171.0	154.2	156.5
Intermediate materials less energy.....	188.9	188.9	185.7	181.6	176.2	174.1
Intermediate materials less foods and energy.....	188.7	188.9	186.0	181.9	176.6	174.7
Crude energy materials ²	339.3	303.9	234.1	190.5	179.2	164.6
Crude materials less energy.....	220.5	210.7	184.6	170.1	162.5	163.7
Crude nonfood materials less energy ³	375.9	339.5	286.6	227.0	222.1	222.3

1 All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for September 2008 have been recalculated to incorporate late reports and corrections by respondents.

2 Includes crude petroleum.

3 Excludes crude petroleum.
