# Viessmann Commercial Project Sign-off Forms

### **IMPORTANT**

This document is used to collect all the necessary information required to deliver your project. Equipment will be ordered based on these specifications. Product shipment will take place no sooner than 4 – 6 weeks after receipt of this document.

#### INDEX:

### Material sign off forms

#### 1. Cover Page

This form must be filled out by all customers.

#### 2. Client information

This form must be filled out before we work on any other forms or sign off sheets

#### 3. Equipment Sign-Off form

This form must be filled out before any equipment can be ordered.

### 4. Chimney Drawing Request form

If applicable. Please provide a detailed dimensioned drawing on a separate sheet of paper of the route that the venting will take. An approval on final CAD drawing must be received before the venting can be ordered.

#### 5. Shipment Sign-Off form

This form must be filled out by all customers.

Please allow for shipping time from Viessmann facility the 4 -6 week submission deadline above, including their corresponding shipping lead times, do NOT include shipping time to the customer.

### Start up sign off form

1a. Project Start-up Sign-off Form 2b. Project Start-up and Installation Form ( 2 Pages)

Please fill this forms out and send to Viessmann when the completion date of the installation is known.

If you have any questions or concerns, please consult your Viessmann Sales Representative.

Commercial Project Sign off Form 12/2010

Project Name:

Please provide a detailed dimensioned drawing on a <u>separate sheet of paper</u> of the route that the venting will take. Use the venting example below as a guide.

### **IMPORTANT**

Details as indicated in the example to the left are necessary, including front, side and top views! To save valuable time, please provide accurate, detailed drawings, together with measurements, all offsets, and dimensions "A" through "I" for review by Viessmann.

- A Housekeeping pad
- **B** Edge of flue collar to wall
- C Floor to ceiling
- **D** Floor thickness
- E Offset CL to CL
- **F** Roof thickness
- G Stack height
- **H** Pitch of roof

### Restrictions

| Boiler Model | Minimum B         |
|--------------|-------------------|
| CT3-17/22/28 | 38-1/8" / 966 mm  |
| CT3-37/46/57 | 42-1/4" / 1071 mm |
| CT3-72/89    | 44-7/8" / 1138 mm |

T-Drain may be available for the middle of 2011 Contact your Viessmann partner

Upon completion, please fax completed Cover Page together with completed Forms (some or all) to:

- Viessmann Canada:- Viessmann BC:

(519) 885-1134 (604) 533-9439 (401) 732-0590

### Check Here

|                | Necessary Conditions for Start-up  | VD2 | VSB/<br>CT3 |
|----------------|--|-----|-------------|
|                | Ensure all boiler enclosure panels are installed.  |     |             |
|                | Ensure burner is mounted onto combustion chamber door.   |     |             |
| oiler          | Ensure supply/return header, including all shunt pump(s) and mixing valves (where required), is piped to system.   |     | N/A         |
| Boi            | Ensure low water cutoff installed at high point on boiler or in piping above pressure vessel.  |     |             |
|                | <b>IMPORTANT:</b> Ensure heating system and boiler(s) are filled and a full heating load exists for start-up; expansion tank must be installed.  |     |             |
|                | Ensure power supply to boiler is installed. Supply photo   |     |             |
|                | On 575/120-volt burners, ensure a transformer is installed (field supplied) according to diagram supplied with controls.   |     |             |
|                | Ensure low water cut-off is wired.   |     |             |
| 8              | Ensure outdoor temperature sensor is installed (if applicable).  |     |             |
| Controls       | Ensure the #5 sensor is installed in tank well and wired to boiler control where DHW tanks are used.   |     |             |
| Ö              | Ensure control is mounted on boiler and electrically connected.  |     |             |
|                | When Viessmann control panel is supplied for project, control panel must be wall mounted, supplied with the specified power, and all pumps controlled by panel must be properly wired.   |     |             |
| <b>D</b>       | Ensure gas train is purged of air, and pressure tested; gas meter must be accessible and operational.  |     |             |
| Gas/Oil Piping | Ensure gas piping to burner gas train is installed with appropriate unions allowing service to burner/boiler.  |     |             |
| Ö              | Ensure gas train regulator vents are piped to the outside or to a vent-limiting orifice pending gas code or local regulations.   |     |             |
| Ś              | NG/LP applications: ensure gas train wired to burner. Gas installation supply photo  |     |             |
| g              | Ensure gas pressure specified on Form 1 is available.  |     |             |
|                | Oil applications: ensure filters/pumps installed.  Oil installation supply photo   |     |             |
| б              | Vent connected to boiler according to installation instructions.  Supply photo   |     |             |
| Ę              | Ensure barometric damper is installed in venting.  |     | N/A         |
| Venting        | Ensure 'P' traps are installed on condensate drains and condensate piping is routed to a floor drain.  | N/A |             |
| Air            | Ensure proper size combustion air and ventilation air openings are provided to boiler room.  |     |             |
| Combustion Air | If a motorized damper has been installed to open the supply of the combustion air and ventilation to the mechanical room, has the "full open proving switch" on the damper been interlocked with the activation of the burner? |     |             |
| ਰੂ             | Ensure combustion air is free of any chemical contaminants.  |     |             |
| Corr           | Where combustion air is ducted to burner, ensure proper size insulated duct complete with all connection flanges and intake screened terminal is installed.  |     |             |
|                |  | 1   |             |

### **IMPORTANT**

Each of the "Necessary Conditions for Start-up" must be met prior to the start-up technicians arriving. Failure to meet these conditions may incur costs additional to those originally quoted.
