4:45 p.m. – 5:00 p.m.	**DOING MORE WITH LESS: PROCESS AND ANALYSIS IN STRATEGIC OPERATIONAL PLANNING**

Airports face the significant challenges shared by many businesses: doing more with less. Like most organizations, airports often contain numerous hierarchies and also function as a public/private collaborative with government agencies and airlines as their business partners. Consequently, communications across these various business 'silos' can be challenging -- yet accomplishing safety and security objectives require effectively integrated activities. To date, finding cost-effective ways to achieve safety and security objectives has proven elusive given the critical nature of these projects. In the present economic climate, airport clients are finding the use of disciplined process analysis to create cost-wise readiness and identify ways to accomplish the highest standards of safety and security.
