97735	Fort Rock			0			
97737	Gilchrist			0			

Risk Level denoted with asterisks indicate that there are only  
5 - 19 locations within the zip code with a radon test result.

No Risk Level was assigned if there were fewer than 5 locations with a test result.

5 - 19 locations within the zip code with a radon test result.  
No Risk Level was assigned if there were fewer than 5 locations with a test result.

**Oregon Radon Program**  
**Indoor Radon Test Results Summary**  
**2014 Data**

The relative level of radon risk for a zip code was assigned based on three different factors:

- Maximum Radon Result
- Average Radon Result
- Percentage of locations within the zip code that had a radon result that was  $\geq 4$  pCi/L.

For each factor, “risk points” were assigned according to values shown in the tables below.

**Percentage of locations within zipcode with a radon test result  $\geq 4$  pCi/L**

Risk Points	Range
0	0%
1	1% - 9%
2	10% - 24%
3	25% - 49%
4	50% - 100%

**Average radon level for zip code (Average)**

Risk Points	Range
1	< 2.00 pCi/L
2	2.00 pCi/L - 4.00 pCi/L
3	4.01 pCi/L - 8.00 pCi/L
4	> 8.00 pCi/L

**Maximum radon level in zip code (Maximum)**

Risk Points	Range
0	< 4.00 pCi/L
1	4.01 pCi/L - 8.00 pCi/L
2	> 8.00 pCi/L

Risk points for each factor were added together to determine the risk score. The risk score is then used to categorize the relative risk (high, moderate, low) for the zip code according to the following table.

Overall Risk Score	Level of Risk
1 - 4	Low
5 - 7	Moderate
8 - 10	High

Calculations of risk level were only made for zip codes where there were at least 5 different locations. Risk levels assigned to zip codes with fewer than 20 locations are demarcated with asterisks and should be interpreted cautiously. Radon test results from school buildings were excluded from the analysis. Radon test results conducted in crawl spaces were also excluded.

Risk Level denoted with asterisks indicate that there are only  
5 - 19 locations within the zip code with a radon test result.  
No Risk Level was assigned if there were fewer than 5 locations with a test result.
